Course Title: Research Methodology

Total Hours: 60

Course Outcomes:

Upon successful completion of this course, the student will be able:

CLO1: To formulate research plan, understand scientific literature

CLO2: To build the hypothesis and test the results.

CLO3: To develop skills to prepare the research papers and PhD thesis. **CLO4:** To Use tools like SPSS, Latex and MS office for research work.

Units/Hour s	Contents	Mapping with Course Learning Outcome
I 15 Hours	Research Aptitude: Meaning of Research, Objectives of Research, and Motivation in Research, Types of Research, Research Approaches, and Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is done. Research Process: Reviewing the literature, Formulation of research problem, Nature and type of variables, Hypothesis - meaning, types, and development of hypothesis and its testing, Meaning & functions of Research Design.	CLO1 and CLO 2
II 15 Hours	Data Analysis: Sources, acquisition and interpretation of data, Quantitative and qualitative data, Graphical representation and mapping of data, Sensitivity Analysis with Data Tables, Optimization with EXCEL Solver, Summarizing Data with Histograms and Descriptive Statistics, Pivot Tables, Summarizing Data with database statistical functions, using correlation, Multiple Regression, Using Sampling to Analyze Data.	CLO1

		CLO3
III 15 Hours	Scientific and Technical Writing: Role and importance of communication, Effective oral and written communication, Scientific writing, Preparing Research papers for journals, Seminars and Conferences, Technical report writing, Making R&D proposals, Dissertation/Thesis writing, Oral and poster presentation in meetings, seminars, group discussions, Use of modern aids; Making technical presentations. Research and academic integrity: Plagiarism, copyright issues, ethics in research, and case studies.	
IV 15 Hours	Use of Computers in Education and Research: Data analysis tools, e-Library, Search engines related to research, Research paper editing tools like Latex. Transactional Modes: Lecture, E-tutorial, Self-Learning, lecture and demonstration.	CLO4

- Lecture
- E-tutorial
- Self-Learning
- Lecture
- Demonstration

Course Title: Research and Publication Ethics (RPE)

Hours: 30

Course Outcomes:

After completion of this course, students will be able:

CLO1: To Gain a deep knowledge about research misconduct and predatory publications.

CLO2: To learn indexing and citation databases, open access publications, research metrics.

CLO3: To execute various plagiarism tools for plagiarism check.

Units/Hour s	Contents	Mapping with Course Learning Outcome
I 7 Hours	Philosophy, Ethics and Scientific Conduct Introduction to philosophy: definition, nature And scope, concept, branches. Ethics: definition, moral philosophy, Nature of moral judgments and reactions. Ethics with respect to science and research Intellectual honest and research integrity Scientific misconducts: falsification, fabrication, and plagiarism. Redundant publications: duplicate and overlapping publications, Salami slicing Selective reporting and misrepresentation of data.	CLO1
II 8 Hours	Publication Ethics Publication ethics: definition, introduction and importance. Best practices/standards setting initiatives and guidelines: COPE, WAME, etc. Conflicts of interest. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types. Violation of publication ethics, authorship and contributor ship. Identification of publication misconduct, complaints and appeals. Predatory publishers and journals.	CLO1

		CLO2, CLO3
	Open Access Publishing	
	Open access publications and initiatives	
	SHERPA/RoMEO online resource to check	
	publisher copyright and self-archiving policies.	
	Software tool to identify predatory publications	
	developed by SPPU	
	Journal finder/ journal suggestion tools viz.	
	JANE, Elsevier Journal Finder, Springer Journal	
III	Suggester, etc.	
8 Hours	Group Discussions	
	a) Subject specific ethical issues, FFP,	
	authorship	
	b) Conflicts of interest	
	c) Complaints and appeals: examples and	
	fraud from India and abroad	
	Software tools	
	Use of plagiarism software like Turnitin, Urkund	
	and other open source software tools.	
		GT 00
	Databases and Research Metrics	CLO2
	A. Databases	
	1. Indexing databases	
	2. Citation databases: Web of Science,	
IV	Scopus, etc.	
7 Hours	B. Research Metrics	
	Impact Factor of journal as per journal citation	
	report, SNIP, SJR, IPP, Cite Score. Metrics: h-	
	index, g index, i10 index, altmetrics.	

- Lecture
- Case Studies
- E-tutorial
- Self-Learning

Suggested Readings:

1. Melville, S., and Goddard, W. (1996). Research methodology: An introduction for science & engineering students. South Africa: Juta Academic.

Course Title: TEACHING ASSISTANTSHIP

Course Code: CST.752

Total Hours: 30

Learning Outcome:

At the end of this skill development course, the scholars shall be able to

- (1) familiarize themselves with the pedagogical practices of effective class room delivery and knowledge evaluation system
- (2) manage large and small classes using appropriate pedagogical techniques for different types of content

Activities and Evaluation:

- The scholars shall attend Master degree classes of his/her supervisor to observe the various transaction modes that the supervisor follows in the class room delivery or transaction process one period per week.
- The scholars shall be assigned one period per week under the direct supervision of his/her supervisor to teach the Master degree students adopting appropriate teaching strategy(s).
- The scholars shall be involved in examination and evaluation system of the Master degree students such as preparation of questions, conduct of examination and preparation of results under the direction of the supervisor.
- At the end of the semester, the supervisor shall conduct an examination of teaching skills learned by the scholar as per the following **evaluation criteria**:
 - The scholars shall be given a topic relevant to the Master degree course of the current semester as his/her specialization to prepare lessons and deliver in the class room before the master degree students for one hour (45 minutes teaching + 15 minutes interaction).
 - The scholars shall be evaluated for a total of 50 marks comprising *content knowledge* (10 marks), *explanation and demonstration skills* (10 marks), *communication skills* (10 marks), *teaching techniques employed* (10 marks), and classroom interactions (10).

Course Title: CURRICULUM, PEDAGOGY AND EVALUATION

L	T	P	Credi
			t
1	0	0	1

Course Code: UNI.753

Learning outcomes:

After completion of the course, scholars shall be able to:

- analyze the principles and bases of curriculum design and development
 - examine the processes involved in curriculum development
 - develop the skills of adopting innovative pedagogies and conducting students' assessment
 - develop curriculum of a specific course/programme

Course Content

Unit I Bases and Principles of Curriculum

4

Total Hours: 15

hours

- 1. Curriculum: Concept and Principles of curriculum development, Foundations of Curriculum Development.
- 2. Types of Curriculum Designs- Subject centered, learner centered, experience centered and core curriculum. Designing local, national, regional and global specific curriculum. Choice Based Credit System and its implementation.

Unit II Curriculum Development

4 hours

- 1. Process of Curriculum Development: Formulation of graduate attributes, course/learning outcomes, content selection, organization of content and learning experiences, transaction process.
- 2. Comparison among Interdisciplinary, multidisciplinary and trans-disciplinary approaches to curriculum.

Unit III Curriculum and Pedagogy

3 hours

- 1. Conceptual understanding of Pedagogy.
- **2.** Pedagogies: Peeragogy, Cybergogy and Heutagogy with special emphasis on Blended learning, Flipped learning, Dialogue, cooperative and collaborative learning
- 3. Three e- techniques: Moodle, Edmodo, Google classroom

Unit IV Learners' Assessment

4 hours

- 1. Assessment Preparation: Concept, purpose, and principles of preparing objective and subjective questions.
- 2. Conducting Assessment: Modes of conducting assessment offline and online; use of ICT in conducting assessments.
- 3. Evaluation: Formative and Summative assessments, Outcome based assessment, and scoring criteria.

Transaction Mode

Lecture, dialogue, peer group discussion, workshop

Evaluation criteria

There shall be an end term evaluation of the course for 50 marks for duration of 2 hours. The course coordinator shall conduct the evaluation.

Course Title: Advance Digital Image Processing

Total Hours: 60

Course Outcomes:

Upon successful completion of this course, the student will be able to:

CLO1: To Discuss the concepts of digital image processing

CLO2: To explain, analyse and implement algorithms for advanced

image analysis.

CLO3: To Design solutions for complex image processing problems like

image retrieval.

Units/Hour s	Contents	Mapping with Course Learning Outcome
I 15 Hours	Recognition of image patterns: Introduction to pattern classification, supervised and unsupervised pattern classification, introduction to neural networks as pattern classifiers. Texture and shape analysis: primitives in textures, classification of textures, gray level co-occurrence matrix, texture spectrum.	CLO1
II 15 Hours	Introduction to shape analysis (landmark points, polygon as shape descriptor, dominant points in shape description, curvature and its role in shape determination, polygonal approximation for shape analysis), active contour model, shape distortion and normalization, contour-based shape descriptor, region based shape descriptors.	CLO2

III 15 Hours	Fuzzy set theory in image processing: introduction to fuzzy set theory (fuzzification, basic terms and operations, image as a fuzzy set, selection of the membership function), need for fuzzy image processing, fuzzy methods of contrast enhancement, fuzzy spatial filter for noise removal, smoothing algorithm.	CLO1
IV 15 Hours	Fuzzy approaches to pixel classification (fuzzy c-means algorithm) Content based image retrieval: introduction, fundamental steps in image retrieval, image features for retrieval, fuzzy similarity measure in an image retrieval System. Transactional Modes: Lecture and demonstration, Flipped Learning, Peer Learning/Teaching.	CLO3

Course Title: Software Metrics and Measurements

Total Hours: 60

Course Outcomes:

Upon successful completion of this course, the student will be able:

CLO1: To apply software testing knowledge, verification & validation and engineering methods.

CLO2: To Design and conduct a software test process for a quality software test.

CLO3: To identify various software testing problems, and solve these problems by designing and selecting software metrics models, testing criteria, strategies, and methods.

Units/Hour s	Contents	Mapping with Course Learning Outcome
I 15 Hours	Overview of Software Metrics: Measurement in Software Engineering, Scope of Software Metrics, Measurement and Models Meaningfulness in measurement, Measurement quality, Measurement process, Scale, Measurement validation, Object-oriented measurements, Goal based framework for software measurement: Software measure classification, Goal-Question-Metrics (GQM) and Goal-Question-Indicator-Metrics (GQIM), Applications of GQM and GQIM.	CLO-1
II 15 Hours	Empirical Investigation: Software engineering investigation, Investigation principles, Investigation techniques, Planning Formal experiments, Case Studies for Empirical investigations. Object-oriented metrics: Object-Oriented measurement concepts, Basic metrics for OO systems, OO analysis and design metrics, Metrics for productivity measurement, Metrics for OO software quality.	CLO-1 and CLO-2

III 15 Hours	Measuring Internal Product attributes: Software Size, Length, reuse, Functionality, Complexity, Software structural measurement, Control flow structure, Cyclomatic Complexity, Data flow and data structure attributes Architectural measurement. Measuring External Product attributes: Software Quality Measurements, Aspects of Quality Measurements, Maintainability Measurements, Usability and Security Measurements.	CLO-2
IV 15 Hours	Measuring software Reliability: Concepts and definitions, Software reliability models and metrics, Fundamentals of software reliability engineering (SRE), Reliability management model.	CLO-3

Course Title: Quantum Cryptography Total Hours: 60

Course Objectives:

The objective of this course is to:

- To provide fundamental concepts of quantum information processing and cryptography, and take the discussion forward to potentials offered technological bottlenecks and the way forward.
- To expose the participants to the state-of-the-art in quantum computing and cryptography with its possible impact on the society.

Course Outcomes:

After completion of course, students would be able:

CLO1: To understand the basic concepts and terminologies in quantum information processing and quantum cryptography.

CLO2: To work in the field of quantum information processing and quantum cryptography, and to design efficient quantum algorithms to solve different computing problems.

CLO3: To design new or modify existing quantum cryptographic algorithms for secure key distribution and communications.

CLO4: To grasp the working principle of a quantum computer and understand the impact of noise in real world implementations.

CLO5: To understand some of the long-standing issues in quantum computing, and way forward in Noise-Intermediate-Scale-Quantum and Post Quantum Cryptography era.

CLO6: To understand the current scenario in Google, IBM, D-wave, IonQ etc.

Units/Hour s	Contents	Mapping with Course Learning Outcome		
I 12 Hours	Basics of Quantum Information and Linear Algebra: Why Quantum Computing, Classical to quantum mechanics, Hilber space, bases and linear independence, operators and matrices, Hermitian and Unitary operators, measurements in quantum mechanics, Einstein-Podolsky-Rosen paradox.	CLO-1		
II 14 Hours	atotog information and antropy was Naumann			
III 17 Hours	Entanglement and Nonlocality: Quantum entanglement, bi-partite and multiqubit systems, Bell-type inequalities and nonlocality, entanglement classes and measures, quantum parallelism, Deutsch-Jozsa algorithm.	CLO-2 and CLO-6		
IV 17 Hours	Applications and Quantum Cryptography: Teleportation, dense coding, entanglement swapping, quantum key distribution, quantum cryptographic protocols. Quantum Noise and Operation: Environments and quantum operations, examples of noisy channels, effect of noise on entanglement and efficiency of communication protocols.	CLO-3, CLO-4 and CLO-5

Course Title: Data Analysis with Machine Learning

Total Hours: 60

Course Objectives:

To help students explain the concept of how to learn patterns and concepts from data without being explicitly programmed to analyze various machine learning algorithms and techniques with a modern outlook focusing on recent advances.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Describe machine learning approaches.

CLO2: Discuss features that can be used for a particular machine learning approach in various applications.

CLO3: Compare and contrast pros and cons of various machine learning techniques.

CLO4: To mathematically analyze various machine learning approaches and paradigms.

CLO5: Formulate various machine learning and ensemble methods for use in IOT applications.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 16 Hours	Introduction to learning Techniques: Supervised Learning (Regression/Classification) Basic methods: Distance-based methods, Nearest-Neighbors, Decision Trees, Naive Bayes. Linear models: Linear Regression, Logistic Regression, Generalized Linear Models. Support Vector Machines, Nonlinearity and Kernel Methods. Beyond Binary Classification: Multi-class/Structured Outputs, Ranking. Activities: Brainstorming, assignment based learning.	CLO-1

II 14 Hours	Unsupervised Learning Clustering: K-means/Kernel K-means Dimensionality Reduction: PCA and kernel PCA Matrix Factorization and Matrix Completion Generative Models (mixture models and latent factor	
14 Hours	Activities: Exercise based learning and practical hands on training.	CLO-3
III 14 Hours		
Scalable Machine Learning (Online and Distributed Learning) A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference. Simulation Tool for Machine Learning, Hands on with recent tools WEKA, R MATLAB. Recent trends in various learning techniques of machine learning and classification methods for IOT applications. Various models for IOT applications. Activities: Analysis of various case studies.		CLO4 and CLO-5

Course Title: Advanced Network Security

Total Hours: 60

Course Objectives:

The outcome of this course is to:

- To introduce students to the concept of security, and types of attacks.
- Describe Symmetric & Asymmetric Key Cryptography
- Define Network Perimeter Security, Access Control Lists and Virtual Private Networks.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Identify the domain specific security issues.

CLO2: Apply Symmetric & Asymmetric Key Cryptography in various

applications.

CLO3: Design Access Control Lists and Virtual Private Networks.

Units/Hours	Contents	Mapping with Course Learning Outcome
I 14 Hours	Mathematics of Cryptography- Prime and Composite Numbers, Greatest Common Divisor, Euclidean algorithm, Modulo arithmetic, Fermat's little theorem, Multiplicative Inverse, Euler's theorem and Totient function, Discrete logarithm. Introduction to Security: Need for security, Security Trends, Security Attacks, Security Services, Security Mechanisms. Security techniques: Plaintext, Cipher text, Encryption & Decryption, Cryptanalysis techniques. Activities: Assignment based and numerical exercise	CLO-1
	based learning, Case study based learning of different security mechanisms.	

		CLO-2
II 16 Hours	Classical Cryptographic Algorithms: Substitutions techniques- Monoalphabetic ciphers, Polyalphabetic Ciphers, Transposition Techniques, Rotor Machines, and Cryptanalysis of classical cryptographic algorithms. Symmetric Key Cryptography: Algorithm types & Modes: - Electronic Codebook (ECB), Cipher Block Chaining (CBC), Cipher Feedback (CFB) Output Feedback (OPFB) Mode, Counter (CTR) Mode. Morden symmetric key Cryptographic Algorithms: Data Encryption Standard (DES), Triple DES, RC4, Blowfish IDEA, Advance Encryption Algorithm (AES), Cryptanalysis.	CLO-2
	Activities: Assignment based and numerical exercise based learning, Implementation of various cryptographic algorithms using computer programming.	
III 16 Hours	Asymmetric key Cryptographic Algorithms:- Public-Key Cryptography Principles, Diffie-Hellman key exchange algorithm, Knapsack algorithm, RSA, ElGamal, Elliptic-curve cryptography. Message Authentication: Approaches to Message Authentication, MD5, SHA-512, Digital Signature Standard (DSS). User Authentication Mechanism: Authentication basics, Passwords, Authentication tokens, Certificate based & Biometric authentication.	CLO-2
	Activities: Implementation and web based simulation of various cryptographic algorithms.

Course Title: Big Data Analytics

Total Hours: 60

Course Objectives:

The course will help students prepare the big data for analysis and extract the meaningful data from unstructured big data. Help student to develop data visualizations skill and to apply various tools for analysis of structured and unstructured big data.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Illustrate the identification of Big Data problem **CLO2:** Learn the Behaviour and Visualisation of Data

CLO3: Differentiate structured data from unstructured data.

CLO4: Use Hadoop related tools such as JAQL, Spark, Pig and Hive for

structured and unstructured Big Data analytics

Units/Hours	Contents	Mapping with Course Learning Outcome
I 15 Hours	Big Data Introduction: What is big data, why big data, convergence of key trends, unstructured data, industry examples of big data, web analytics, big data and marketing, fraud and big data, risk and big data, big data and healthcare, big data in medicine, advertising and big data, big data technologies, open source technologies, cloud and big data, mobile business intelligence, Crowd sourcing analytics, inter and trans firewall analytics. Data Gathering and Preparation: Data formats, parsing and transformation, Scalability and real-time issues. Activities: Case Study and Group Discussion.	CLO-1

II 15 Hours	Data Cleaning: Consistency checking, Heterogeneous and missing data, Data Transformation and segmentation. Visualization: Descriptive and comparative statistics, Designing visualizations, Time series, Geo-located data, Correlations and connections, Hierarchies and networks, interactivity. Activities: Implementation above theory with Python code.	
III 15 Hours	Big Data Technology: Big Data Architecture, Big Data Warehouse, Functional Vs. Procedural Programming Models for Big Data NoSQL: Introduction to NoSQL, aggregate data models, key-value and document data models. Activities: Implementation and designing with Spark/Mongo DB.	CLO-3
IV 15 Hours	Big Data Tools: Hadoop: Introduction to Hadoop Ecosystem, HDFS, Map-Reduce programming, Spark, PIG, JAQL, Understanding Text Analytics and Big Data, Predictive Analysis of Big Data, Role of Data Analyst. Activities: Implementation and usage of tools over the cloud.	CLO-4

Course Title: Internet of Things

Total Hours: 60

Course Objectives:

The objective of this course is to introduce the students to the concepts of IoT, its networking and communication. The course focussed on use of IoT technology and its design constraints.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Describe IOT and its networking and communication aspects.

CLO2: Analyze the challenges in IoT Design

CLO3: Design IoT applications on different embedded platform.

Units/Hours	Contents	Mapping with Course Learning Outcome
Introduction to IoT: Defining IoT, Characteristics of IoT, Physical design of IoT, Logical design of IoT Functional blocks of IoT, Communication models and APIs IoT and M2M, Difference between IoT and M2M Software define Network.		
	Activities : Assignment and Exercise based learning.	
II 14 Hours	Network and Communication aspects: Wireless medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment, Node discovery, Data aggregation and Dissemination.	
	Activities: Flip Learning with simulation tools.	
III 16 Hours	Challenges in IoT Design: challenges, Development challenges, Security challenges, Other Challenges Domain specific applications: IoT Home automation, Industry applications, Surveillance applications, Other IoT applications	

	Activities: Group Discussion and IOT design simulation using simulation tools.
	Activities: Group Discussion and IOT design simulation using simulation tools.
IV 16 Hours	Developing IoTs: Developing applications through IoT tools including Python/Arduino/Raspberry pi, developing sensor based application through embedded system platform.
	Activities: Hands on experience with IOT kits.

Course Title: Data Mining Total Hours: 60

Course Objectives:

The objective of this course is to introduce data warehousing and mining techniques. Applications of data mining in web mining, pattern matching and cluster analysis are included to aware students of broad data mining areas.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Discuss different sequential pattern algorithms.

CLO2: Apply the techniques to extract patterns from time series data and their applications in real world.

CLO3: Examine Graph mining algorithms to Web mining. **CLO4:** Design the computing framework for Big Data.

Units/Hours	Contents			
I 14 Hours	Introduction to Data Warehousing: Data warehousing Architecture, OLAP Server, Data warehouse Implementation. Data Mining: Mining frequent patterns, association and correlations; Sequential Pattern Mining concepts, primitives, scalable methods. Activities: Brainstorming for finding the Association rules, Case study to illustrate the data warehouse and data mining model design principles.			
II 15 Hours	Classification and prediction: Cluster Analysis – Types of Data in Cluster Analysis, Partitioning methods, Hierarchical Methods; Transactional Patterns and other temporal based frequent patterns.	CLO-1		
	Activities: Assignment based learning, Exercise based learning.			

III 16 Hours	Mining Time series Data, Periodicity Analysis for time related sequence data, Trend analysis, Similarity search in Time-series analysis; Mining Data Streams, Methodologies for stream data processing and stream data systems, Frequent pattern mining in stream data, Sequential Pattern Mining in Data Streams, Classification of dynamic data streams.	
	Activities: Case based study and Group discussion for the prediction of solutions for real time problems.	
IV 15 Hours	Web Mining, Mining the web page layout structure, mining web link structure, mining multimedia data on the web, Automatic classification of web documents and web usage mining; Distributed Data Mining. Recent trends in Distributed Warehousing and Data Mining, Class Imbalance Problem; Graph Mining; Social Network Analysis.	
	Activities: Student presentation, Class discussion on different types of mining for the solution of real world problem.

Course Title: Research Methodology - Lab

Course Outcomes:

Upon successful completion of this course, the student will be able to:

CLO1: To Use data analysis tools.

CLO2: To analyze the research results using data analysis tools.

The Laboratory assignments for this lab will include the assignments from the paper CST-701: Based on MS office, Latex and SPSS.

Lab Assignments will be based on topics studied in CST.701

Suggested Readings:

L	T	P	C
			r
0	0	4	2

Course Title: Advance Image Processing Lab

Learning Outcomes:

Upon successful completion of this course, the student will be able to:

CLO1: To understand the concepts of image recognition and analysis.

CLO2: To Implement some techniques and analyze the result.

CLO3: To Use tools like Matlab and Python

Lab Assignments will be based on topics studied in Subject

The Laboratory assignments for this lab will include the assignments from the paper CST-703: Based on Image feature extraction, fuzzy image processing, and image classification.

Suggested Readings:

Course Title: Software Metrics and Measurements-Lab

Course Outcomes:

The Laboratory assignments for this lab will include the assignments from the paper CST-704

Lab Assignments will be based on topics studied in Subject

Suggested Readings:

Code: CST. 709

Course Title: Quantum Cryptography Lab

Course Outcomes:

At the end of the course the student will be able to:

CLO1: To simulate qubits, multi-qubit pure and mixed quantum states, the celebrated Bell states and density matrices associated with entangled systems.

CLO2: To simulate quantum circuits composed of single and multi-qubit quantum gates.

CLO3: To simulate different measures of entanglement and nonlocality in pure and mixed two and three-qubit states.

CLO4: To simulate different noisy channels to analyse the effect of noise on entanglement and efficiency of a protocol.

CLO5: To simulate different quantum information processing protocols such as teleportation, dense coding, and Secret Sharing.

The Laboratory assignments for this lab will include the assignments from the paper CST-708: Based on Qubit, Quantum Gates, Density Matrix, Entanglement, Quantum Algorithms, and Applications- Teleportation, dense coding, entanglement swapping, and quantum key distribution.

Course Title: Data Analysis with Machine Learning Lab

Course Objectives:

The objectives of the Machine Learning Lab course are to introduce students to the basic concepts and techniques of Machine Learning. To develop skills of using recent machine learning software for solving practical problems.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Review some common Machine Learning algorithms and their limitations.

CLO2: Apply common Machine Learning algorithms in practice and implementing the same.

CLO3: Perform experiments in Machine Learning using real-world data.

Suggested Readings:

- 1. Lab Manual
- 2. Kumar, U.D., and Pradhan, M. (2019). Machine Learning using Python. Wiley.

Lab Evaluation:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Course Title: Advanced Network Security Lab

Course Objectives:

- To introduce students to the concept of security, and types of attacks.
- Describe Symmetric & Asymmetric Key Cryptography
- Define Network Perimeter Security, Access Control Lists and Virtual Private Networks.

Course Outcomes:

CLO1: Identify the domain specific security issues.

CLO2: Implement Symmetric & Asymmetric Key Cryptography algorithms.

CLO3: Design Access Control Lists and Virtual Private Networks.

Suggested Readings:

- 1. Lab Manual
- 2. Forouzan, B. A. (2010). Cryptography & Network Security. New Delhi: Tata McGraw-Hill Education.
- 3. Kahate, A. (2009). Cryptography and Network Security. New Delhi: tata McGraw-Hill Higher Ed.

Lab Evaluation:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Course Title: Big Data Analysis Lab

Course Objectives:

The lab will help students prepare the big data with pre-procesing analysis and to extract the meaningful data from unstructured data. Help student to develop data visualizations skill and to apply various tools for analysis of structured and unstructured big data.

Learning outcome:

After completion of lab course, students would be able to:

CLO1: Pre-process the un-structured data by various cleaning activities.

CLO2: Convert the un-structured data to structured format.

CLO3: Use Python libraries for analysis and visualisation of data such as

PySpark, PyMongo, pandas, numpy and beutifulsoap.

Students will implement the lab practical as per the syllabus of the subject.

Lab Evaluation:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

Course Title: Internet of Things-Lab

Course Objectives:

The outcome of IOT Lab is to introduce the students to the different IOT technologies. To develop skills that will help the students to develop different IOT applications. To help use different IOT protocols and analysis the data in IOT.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Identify the different technology and develop IOT based applications.

CLO2: Analysis and evaluate protocols used in IOT.

CLO3: Evaluate the data received through sensors in IOT.

Students will implement the lab practical as per the syllabus of the subject.

Lab Evaluation:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100

L	T	P	Cr

Course Title: Data Mining-Lab

Course Objectives:

The outcome of Data Mining Lab is to introduce the students to the different technologies used for Data Mining. To develop skills that will help the students to develop different applications/technologies for data mining applications.

Course Outcomes:

After completion of course, students would be able to:

CLO1: Design a data mart or data warehouse for any organization

CLO2: Extract knowledge using data mining techniques

CLO3: Adapt to new data mining tools.

Students will implement the lab practical as per the syllabus of the subject.

Lab Evaluation:

Component	Marks
Continuous Evaluation	60
End Term (Implementation and Viva-Voce)	40
Total	100
