

# Central University of Punjab

## Course Structure and Syllabus

### **M.Sc. Chemistry** **(Specialization: Applied Chemistry)** **Batch 2024-26**

**Department of Chemistry**  
**School of Basic Sciences**

## **Graduate Attributes for M.Sc. Chemistry (Specialization: Applied Chemistry)**

Graduate attributes are the understandings, skills, and qualities that Department of Chemistry along with CUPB community agrees where the M. Sc. Chemistry (Specialization: Applied Chemistry) students should develop these characteristics during the time spent in the institution.

The Graduates will be able to identify various aspects of chemicals and their application in consumer products and industrial set-up. They have comprehensive knowledge and understanding of their subject, for application in a multidisciplinary environment. They will be effective in quality control and optimization in the industrial environment, applying critical creative and evidence based thinking to conceive innovative responses to policy, economics and project management.

The graduates will engage in professional behaviour, communicate well in the group as well as in other groups/institutions, have entrepreneurial potential. They will be able to take leadership roles in their occupations, careers and community with ethical behaviour. They will be able to contribute to a multicultural, IT revolutionized and sustainable society/policy as global citizens.

## **Examination pattern and evaluation for Masters' students**

**Formative Evaluation:** Internal assessment shall be 25 marks using any two or more of the given methods: tests, open book examination, assignments, term paper, etc. The Mid-semester test shall be descriptive type of 25 marks including short answer and essay type. The number of questions and distribution of marks shall be decided by the teachers.

**Summative Evaluation:** The End semester examination (50 marks) with 70% descriptive type and 30% objective type shall be conducted at the end of the semester. The objective type shall include one-word/sentence answers, fill-in the blanks, MCQs', and matching. The descriptive type shall include short answer and essay type questions. The number of questions and distribution of marks shall be decided by the teachers. **Questions for exams and tests shall be designed to assess course learning outcomes along with focus on knowledge, understanding, application, analysis, synthesis, and evaluation.**

The evaluation for IDC, VAC and entrepreneurship, innovation and skill development courses shall include MST (50 marks) and ESE (50 marks). The pattern of examination for both MST and ESE shall be same as ESE described above for other courses.

Evaluation of dissertation proposal in the third semester shall include 50% weightage by supervisor and 50% by HoD and senior-most faculty of the department. The evaluation of dissertation in the fourth semester shall include 50% weightage for continuous evaluation by the supervisor for regularity in work, mid-term evaluation, report of dissertation, presentation, and final viva-voce; 50% weightage based on average assessment scores by an external expert, HoD and senior-most faculty of the department. Distribution of marks is based on report of dissertation (30%), presentation (10%), and final viva-voce (10%). The external expert may attend final viva-voce through offline or online mode.

## **Examination Pattern**

<b>Core, Discipline Elective, and Compulsory Foundation Courses</b>			<b>IDC, VAC, and Entrepreneurship, Innovation and Skill Development Courses</b>	
	Marks	Evaluation	Marks	Evaluation
Internal Assessment	25	Various methods	-	-
Mid-semester test (MST)	25	Descriptive	50	Descriptive (70%) Objective (30%)
End-semester exam (ESE)	50	Descriptive (70%) Objective (30%)	50	Descriptive (70%) Objective (30%)

<b>Dissertation Proposal (Third Semester)</b>			<b>Dissertation (Fourth Semester)</b>		
	Marks	Evaluation		Marks	Evaluation
Supervisor	50	Dissertation proposal and presentation	Supervisor	50	Continuous assessment (regularity in work, mid-term evaluation) dissertation report, presentation, final viva-voce
HoD and senior-most faculty of the department	50	Dissertation proposal and presentation	External expert, HoD and senior-most faculty of the department	50	Dissertation report (30), presentation (10), final viva-voce (10)

Marks for internship shall be given by the supervisor, HoD and senior-most faculty of the department.

### **Some Guidelines for Internal Assessment**

1. The components/pattern of internal assessment/evaluation should be made clear to students during the semester.
2. The results of the internal assessment must be shown to the students.
3. The question papers and answers of internal assessment should be discussed in the class.
4. The internal assessment shall be transparent and student-friendly and free from personal bias or influence.

**Course Title: Fundamental Biology (Non-medical group)**

**Paper Code: CHM.506**

<b>L</b>	<b>T</b>	<b>P</b>	<b>Cr</b>
3	0	0	3

**Total Contact Hours: 45**

**Learning Outcome:** After this course completion, students will be able to

- CLO1:** Interpret molecular structure and interactions present in proteins, nucleic acids, carbohydrates and lipids.
- CLO2:** Demonstrate the organization and working principles of various components present in the living cell.
- CLO3:** Apply the knowledge of Physical principles of structure, function, and folding of biomolecules.

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b>  <b>11 Hours</b>	<p><b>Introduction:</b> Cell structure and functions, thermodynamics and kinetics of biological processes, ATP. Role of water in life, pH, Acidic and basic buffers, Biological buffers, solution equilibria, Henderson-Hasselbalch equation, Hofmeister series, Chaotropic and kosmotropic ions/co-solvents.</p> <p><i>Peer discussion on role of buffers in Biological system and stability of drug formulations</i></p>	<b>CLO1, CLO2</b>
<b>Unit-2</b>  <b>11 Hours</b>	<p><b>Amino Acids and Peptides:</b> Classification and properties of amino acids, peptide and polypeptides, primary structures, structure of peptide bond, synthesis of peptides, different protecting groups in peptide chemistry, N-terminal, C-terminal and sequence determination.</p> <p><b>Carbohydrates:</b> Biologically important monosaccharides, disaccharides and polysaccharides and glycoproteins.</p> <p><i>Importance of peptides and carbohydrates in the context of biology through peer learning</i></p>	<b>CLO2</b>
<b>Unit-3</b>  <b>11 Hours</b>	<p><b>Proteins:</b> Secondary structure of proteins with emphasize on supramolecular characteristics of alpha-helix, beta-helix, tertiary structure of protein-folding, quaternary structure of protein, in-vivo and in-vitro protein folding, protein misfolding and conformational diseases.</p> <p><i>Secondary, tertiary and quaternary structure of Proteins: Classroom debate</i></p>	<b>CLO3</b>
<b>Unit-4</b>  <b>12 Hours</b>	<p><b>Nucleic Acids:</b> Purine and pyrimidine bases, nucleotides, nucleosides, base pairing <i>via</i> H-bonding, structure of ribonucleic acids (RNA) and deoxyribonucleic acids (DNA), double helix model of DNA, different types of RNA and their functions, the chemical basis for heredity.</p> <p><b>Lipids:</b> Lipid classification, lipid bilayers, lipoproteins-composition. High density (HDL) and low-density (LDL) lipoproteins and function.</p> <p><i>3D structures of DNA, RNA: Peer discussion</i></p>	<b>CLO1, CLO2, CLO3</b>

**Mode of Transactions:** Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

L	T	P	Cr
3	0	0	3

**Learning Outcome:** The students will be able to

**CLO1:** Interpret and apply the graphical representation of various complex, quadratic trigonometric and logarithmic functions.

**CLO2:** Recognize and apply the series, sequence and Binomial expansions in various chemical applications.

**CLO3:** Apply the physical understanding of differential calculus for functions and their graphical behaviour.

**CLO4:** Demonstrate and apply the various mathematical operations including matrix operations, differentiation, integration, and differential equations for common problems in chemistry.

**CLO5:** Demonstrate and apply the statistical methods in experimental evaluations in chemistry.

Units/ hours	Content	Mapping with CLOs
<b>Unit 1</b>  <b>11 Hours</b>	<p><b>Trigonometric functions:</b> Trigonometric operations for sum and differences of angles, addition and subtraction formulas.</p> <p><b>Algebra:</b> Polynomial equations and their solutions: binomial theorem and expansion. Common series and expansions used in chemistry.</p> <p><b>Complex Algebra:</b> Complex numbers, the graphical interpretation of complex numbers, characterizations of the exponential function, the trigonometric functions of complex argument (<math>e^{iq}</math>, <math>e^{-iq}</math>).</p> <p><i>Peer discussion on the functions and their characteristics graphical behaviours</i></p>	<b>CLO1,</b> <b>CLO2</b>
<b>Unit 2</b>  <b>12 Hours</b>	<p><b>Differential Calculus</b></p> <p>Functions, limits, continuity, first principle of differentiation, basic rules of differentiation, maxima and minima, exact and inexact differentials, partial differentiation, application to solution of potential energy, van der Waals radii, velocity and Boltzmann distribution.</p> <p><b>Matrix Algebra:</b> Addition and multiplication; inverse, adjoint and transpose of matrices, matrix equation, Introduction to vector spaces, matrix Eigenvalues and Eigenvectors, diagonalization, determinants (examples from Huckel theory).</p> <p><i>Problem solving approach and revisiting problems in chemistry at undergraduate level quantum chemistry on matrix based solutions.</i></p>	<b>CLO3,</b> <b>CLO4</b>

<p><b>Unit 3</b></p> <p><b>11 Hours</b></p>	<p><b>Integral Calculus</b></p> <p>Basic rules for integration, integration by parts, partial fraction and substitution, definite integrals, evaluation of definite and some standard integrals related to chemistry</p> <p><b>Elementary Differential Equations:</b> Variables-separable and exact, first-order differential equations, homogenous, exact and linear equations. Applications to chemical kinetics, quantum chemistry, etc. solutions of differential equations by the power series method, spherical harmonics, second order differential equations and their solutions.</p> <p><i>Brainstorming and Problem solving approach for integral calculus and differential equations in chemistry related problems</i></p>	<p><b>CLO4</b></p>
<p><b>Unit 4</b></p> <p><b>11 Hours</b></p>	<p><b>Basic Statistics:</b> Measures of central tendency and dispersal, Histograms, Probability distributions (Binomial, Poisson and Normal), Sampling distribution, Kurtosis and Skewness. Confidence interval, Errors, Levels of significance, Hypothesis testing.</p> <p><b>Comparing means of two or more groups:</b> Student's t-test, Paired t-test, Mann-Whitney U-test, Wilcoxon signed-rank, One-way and two-way analysis of variance (ANOVA), <math>\chi^2</math> test.</p> <p><b>Regression and correlation:</b> Standard errors of regression coefficients, Comparing two regression lines.</p> <p><i>Peer discussion of the significance of linear regression to chemistry and hypothesis testing.</i></p>	<p><b>CLO5</b></p>

**Mode of Transactions:** Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

**Course Title: Physical Chemistry-I**

**Paper Code: CHM.511**

**Total Contact Hours: 45**

**Learning Outcome:** After the completion of the course students will be able to

- CLO1:** Interpret and solve the Schrodinger equation for various systems, particle in a boundary model, Electronic and Hamiltonian operators for molecules.
- CLO2:** Explain the quantum chemical description of angular momentum and term symbols for a one and many-electron systems.
- CLO3:** Relate the Born-Oppenheimer approximation, the Pauli principle, Hund's rules, Hückel theory and the variation principle with the atomic and molecular phenomena.
- CLO4:** Explain the statistical aspects of system and relate the classical thermodynamics to quantum mechanics.
- CLO5:** Apprehend and apply partition function in the deduction of thermodynamic properties of chemical systems.

Units/ hours	Content	Mapping with CLOs
<b>Unit 1</b>  <b>11 Hours</b>	<p><b>Fundamental Background:</b> Review of essential mathematical concepts required for quantum chemistry, Postulates of quantum mechanics, Eigen values and Eigen functions, operators, Schrodinger equation.</p> <p><b>Translational, Rotational and Vibrational Motions:</b> - Free particle and particle in a box and its application, one-dimensional harmonic oscillator and rigid rotor, particle in a ring, particle on a sphere.</p> <p><i>Problem solving approach to determine Eigen values and Eigen function using corresponding operator and Schrodinger equation. Brainstorming on defining and solving Schrodinger equation for different systems like particle in a box, rigid rotator, simple harmonic oscillator.</i></p>	<b>CLO1</b>
<b>Unit 2</b>  <b>11 Hours</b>	<p><b>Angular Momentum:</b> Ordinary angular momentum, generalized angular momentum, Eigen functions and Eigen values for angular momentum, Ladder operator, addition of angular momenta, spin, antisymmetry and Pauli exclusion principle, Slater determinantal wave functions.</p> <p><b>Electronic Structure of Atoms:</b> Electronic configuration, term symbols and spectroscopic states, Russell-Saunders terms and J-J coupling schemes, Magnetic effects: spin-orbit coupling and Zeeman splitting.</p> <p><i>Understanding multi-electron atom quantum evaluation through peer discussion and brainstorming sessions.</i></p>	<b>CLO2, CLO3</b>
<b>Unit 3</b>  <b>12 Hours</b>	<p><b>Variation Methods:</b> The variation theorem and its application, linear variation principle.</p> <p><b>Born-Oppenheimer Approximation:</b> LCAO-MO and VB treatments of the <math>H_2^+</math> and <math>H_2</math>, Shape of molecules, Hybridization and valence MOs of <math>H_2O</math> and <math>NH_3</math>. Determination of bond angle in <math>sp^3</math>, <math>sp^2</math> and <math>sp</math>, Huckel Theory of acyclic and cyclic conjugated systems, Bond order and charge density</p> <p><i>Application of Variation method and its uses in pi-HMO theory for acyclic and cyclic conjugated organic systems through peer learning. Application of MOT and VBT for <math>H_2</math> and <math>H_2^+</math> system through demonstration.</i></p>	<b>CLO4</b>

<b>Unit 4</b>  <b>11</b>  <b>Hours</b>	<b>Classical Thermodynamics and Phase Transitions: Partial Molar Properties</b> , Gibbs- Duhem equation, Chemical potential of liquids, Phase transition: Clausius-Clapeyron equation.  <b>Statistical Thermodynamics:</b> Statistical concepts and examples, Thermodynamic probability and entropy,  Partition function, molar partition function, thermodynamic properties in terms of the molecular partition function for monoatomic gases, rotational, translational, vibrational, and electronic partition functions for diatomic molecules, calculation of equilibrium constants in terms of the partition function.  <i>Partition function and its correlation to classical thermodynamic evaluation through brainstorming session and peer learning</i>	<b>CLO5</b>

**Course Title: Practical Inorganic Chemistry**

**Paper Code: CHM.513**

**Contact Hours: 60**

**Learning Outcome:** The students will be able to

**CLO1:** Perform volumetric and gravimetric analysis of cations and anions within reaction mixtures.

**CLO2:** Standardize and titrate various inorganic compounds.

L	T	P	Cr
0	0	4	2

## Experiments:

### Introduction to good laboratory practices in chemistry.

#### Gravimetric Estimation

1. Determination of  $\text{Ba}^{2+}$  as its sulphate/chromate.
2. Estimation of lead as its lead sulfate.
3. Estimation of Nickel (II) as its nickel dimethyl glyoximate.
4. Estimation of  $\text{Cu}^{2+}$  as cuprous thiocyanate.

#### Precipitation Titrations

1.  $\text{AgNO}_3$  standardization by Mohr's method.
2. Volhard's method for  $\text{Cl}^-$  determination.

#### Oxidation-Reduction Titrations

1. Standardization of  $\text{KMnO}_4$  with sodium oxalate and determination of  $\text{Ca}^{2+}$  ion.
2. Standardization of ceric sulphate with Mohr's salt and determination of  $\text{Cu}^{2+}$ ,  $\text{NO}_2$  and  $\text{C}_2\text{O}_4^{2-}$  ions.
3. Standardization of  $\text{K}_2\text{Cr}_2\text{O}_7$  with  $\text{Fe}^{2+}$  and determination of  $\text{Fe}^{3+}$  (Ferric alum)
4. Standardization of hypo solution with potassium iodate /  $\text{K}_2\text{Cr}_2\text{O}_7$  and determination of available  $\text{Cl}_2$  in bleaching powder,  $\text{Sb}^{3+}$  and  $\text{Cu}^{2+}$ .
5. Determination of hydrazine with  $\text{KIO}_3$  titration.

**Mode of Transactions:** Demonstration, PPT, videos, Lecture cum demonstration

**Course Title: Practical Organic Chemistry**

**Paper Code: CHM.514**

**Total Contact Hours: 60**

L	T	P	Cr
0	0	4	2

**Learning Outcome:** At the end of this course student will be able to

- CLO1:** Exercise good laboratory practices including safe handling of hazardous chemicals, laboratory glassware and equipment(s).
- CLO2:** Apply various experimental skills for purification, isolation and recrystallization of organic molecules.
- CLO3:** Analyze the progress of a given reaction on thin layer chromatography.

## Experiments:

### Safety and Handling of hazardous chemicals:

- (i) Good laboratory practices, handling and disposal of hazardous chemicals.
- (ii) Awareness about different types of glassware, heating devices, equipment(s), how to conduct organic reaction etc.

### A. Techniques:

**Chromatography:** Thin layer chromatography (TLC): Monitoring the progress of chemical reactions,  $R_f$  values: identification of unknown organic compounds by comparing the  $R_f$  values with known standards. Column chromatography.

**Purification Techniques:** crystallization, distillation, sublimation.  
Determination of melting point and mixed melting point.

**B. Single Stage Synthesis:** Synthesis of compounds and their purification, aspects such as conversion, theoretical yield and percentage yield should be paid attention. (Attempt any six)

1. Synthesis of chalcones *via* Claisen-Schmidt condensation.
2. Reduction of benzophenone to benzhydral using  $\text{NaBH}_4$ .
3. Conversion of benzaldehyde to cinnamic acid (Knoevenagel condensation)
4. Conversion of benzaldehyde to dibenzylidene acetone (Aldol condensation)
5. To prepare phenylpropene *via* dehydration of corresponding phenylpropanol.
6. To prepare ethyl cinnamate *via* acid catalyzed esterification of cinnamic acid.
7. Conversion of phthalic anhydride to phthalimide
8. To synthesize arylidene analogue of Meldrum acid.
9. Synthesis of alcohol *via* addition of Grignard reagent to an aldehyde.

**Mode of Transactions:** Demonstration, PPT, videos, Lecture cum demonstration

**Course Title: Physical Chemistry-II**

**Paper Code: CHM.523**

**Total Contact Hours: 45**

**Learning Outcome:** The students will be able to

**CLO1:** Evaluate and predict the spontaneity of a redox processes in electrochemical systems

**CLO2:** Apply activity coefficient calculated of solution using Debye-Huckel theory and Ideally-Dilute solutions in chemical aspects.

**CLO3:** Apprehend and apply Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics to the thermodynamic system.

**CLO4:** Establish and evaluate the mechanism and kinetics for catalytic and photochemical reactions, homogenous and heterogeneous catalyzed reactions.

**CLO5:** Interpret the fast reaction monitoring for complex reactions.

**CLO6:** Predict and establish the thermodynamic and kinetic aspects of adsorption and catalysis.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>Unit 1</b>  <b>12 Hours</b>	<p><b>Electrochemistry:</b> Activity, Activity coefficient; determination of activity and activity coefficients, Activity-coefficients, mean activity coefficients; Debye-Huckel treatment of dilute electrolyte solutions.</p> <p><b>Electrochemical Cells:</b> Nernst equation, redox systems, electrochemical cells, application of electrochemical cell, concentration cells with and without liquid junction, thermodynamics of reversible electrodes and reversible cells, potentiometric titration.</p> <p><i>Understanding application of electrochemistry using classroom games activity. Expanding the understanding of conductance application using peer learning.</i></p>	<b>CLO1, CLO2</b>
<b>Unit 2</b>  <b>11 Hours</b>	<p><b>Theories of Statistical Thermodynamics:</b> Concept of Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics. Difference between Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics. Applications of Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics, Monoatomic solids, theories of specific heat for solids.</p> <p><i>Demonstrating application of various statistical thermodynamic theories and Debye theory for heat capacity.</i></p>	<b>CLO3</b>
<b>Unit 3</b>  <b>11 Hours</b>	<p><b>Reaction Kinetics:</b> Introduction, complex reactions, steady state approximation, kinetic mechanisms of chemical reactions, Arrhenius and Eyring equations and their applications, collision theories of rate constant, treatment of unimolecular reactions, steric factor, ionic reactions: salt effect.</p> <p><b>Photochemical Reactions and Processes:</b> Laws of photochemistry and kinetics of photochemical reactions.</p> <p><b>Fast Reaction Kinetics:</b> Introduction to time-resolved techniques for absorption and emission measurements, relaxation method, study of kinetics of fast reactions by millisecond stopped-flow, nanosecond flash photolysis techniques.</p> <p><i>Understanding chemical kinetics and potential surface-reaction coordinate by hands on activity either as gaming, stochastic and molecular dynamic models. Learning photochemical reaction kinetics through problem solving activities.</i></p>	<b>CLO4, CLO5</b>

<b>Unit 4</b>  <b>11 Hours</b>	<p><b>Adsorption:</b> Adsorption of solids, Langmuir and Fredulich Isotherms, BET adsorption isotherm, Gibbs adsorption isotherm.</p> <p><b>Catalysis:</b> Homogeneous catalysis and heterogeneous catalysis, enzyme catalysis. Michealis-Menten mechanism, Lineweaver-Burk Plot, competitive and non-competitive bindings, application of enzyme catalysis.</p> <p><i>Application and challenges in adsorption towards environmental and nanomaterial through peer learning. Enzyme binding and catalysis through inquiry guided and gaming based learning.</i></p>	<b>CLO5,</b> <b>CLO6</b>

**Course Title: Molecular Spectroscopy**

**Paper Code: CHM.525**

**Total Contact Hours: 45**

L	T	P	Cr
3	0	0	3

**Learning Outcome:** The students will be able to

**CLO1:** Apply microwave, infrared-vibration-rotation Raman and infra-red Spectroscopy for chemical analysis and prediction of molecular structure

**CLO2:** Demonstrate and apply electronic absorption and emission spectroscopy of elements and simple molecules.

**CLO3:** Demonstrate and elucidate the physical principles of nuclear magnetic and electron spin resonance spectroscopy.

**CLO4:** Explore application of laser spectroscopy and photoelectron spectroscopy in materials and biomaterials.

Units/ hours	Content	Mapping with CLOs
<b>Unit 1</b>  <b>11 Hours</b>	<p><b>Electronic Spectroscopy:</b> Electronic transition, energy of electronic transition, selection rules, the Franck-Condon principle. UV-Visible and CD spectroscopy</p> <p><b>Photoluminescence: Jablonski Diagram;</b> Measurement of fluorescence and phosphorescence lifetimes, photosensitization, quenching and photodimerization, Stern-Volmer equation.</p> <p><b>Microwave Spectroscopy:</b> Basic principle and instrumentation, classification of molecules, selection rule in microwave spectroscopy, rigid rotor model, effect of isotopic substitution on the transition frequencies, intensities of spectral lines, non-rigid rotor.</p> <p><i>Problem solving approach to determine the bond length of diatomic and polyatomic molecules and effect of isotopic substitution on transition frequencies.</i></p>	<b>CLO1,</b> <b>CLO2</b>
<b>Unit 2</b>  <b>12 Hours</b>	<p><b>Pure Vibrational Spectroscopy:</b> Basic principle and instrumentation of IR spectroscopy, Review of harmonic oscillator, selection rules, vibrational energies of diatomic molecules, zero-point energy, force constant and bond strength, anharmonicity, vibration-rotation spectroscopy, Morse potential energy diagram, P, Q, R branches, vibrations of polyatomic molecules, overtones and hot bands.</p> <p><b>Raman Spectroscopy</b> - Basic principle and instrumentation of Raman spectroscopy, classical and quantum theories of Raman Effect, vibrational-rotational Raman spectra, selection rules, mutual exclusion principle, resonance Raman Spectroscopy, depolarization ratio, surface enhanced Raman spectroscopy, coherent anti-stokes Raman spectroscopy. Application of Raman spectroscopy.</p> <p><i>Brainstorming on use of electronic, pure vibrational, pure rotational and vibrational-rotational spectroscopy in understanding chemical characteristics.</i></p>	<b>CLO1,</b> <b>CLO2</b>

<b>Unit 3</b>  <b>11 Hours</b>	<b>Magnetic Resonance Spectroscopy:</b> Basic principles of NMR and ESR, instrumentation of NMR and ESR, magnetization vector and relaxation, NMR transitions, Bloch equation, relaxation effects and mechanism, effect of quadrupole nuclei, nuclear overhauser effect (NOE), multiple pulse methods, Hyperfine splitting in ESR. Application of NMR and ESR Spectroscopy.  <i>Understanding applications of magnetic resonance spectroscopy through peer learning and brainstorming.</i>	<b>CLO3</b>
<b>Unit 4</b>  <b>11 Hours</b>	<b>Lasers and Laser Spectroscopy:</b> Principles of laser action, pulsed lasers, examples of lasers: He-Ne, Nd-YAG, dye lasers.  <b>Atomic Force Spectroscopy:</b> Basic principle and instrumentation, application of single molecule force spectroscopy.  <b>Photoelectron spectroscopy:</b> Basic principle and instrumentation, photoelectric effect, X-ray photoelectron spectroscopy XPS. Application of XPS. <i>Understanding application and instrumentation of laser, photoelectron and atomic force spectroscopy through peer discussion.</i>	<b>CLO4</b>

**Mode of Transactions:** Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming.

**Course Title: Strategies in Synthesis**

L	T	P	Cr
3	0	0	3

**Paper Code: CHM.526**

**Total Contact Hours: 45**

**Learning Outcome:** At the end of this course, student will be able to

- CLO1:** Identify various retrosynthetic strategies and design the synthesis of target molecules.
- CLO2:** Apply the concept of enolate chemistry for controlling the selectivity of various organic transformations.
- CLO3:** Design various processes for the synthesis of commercially important molecules taking into consideration the protection and deprotection strategies.

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b>  <b>11 Hours</b>	<p><b>Retrosynthesis:</b> Synthons, synthetic equivalent, functional group interconversion (FGI), functional group addition, functional group elimination, criteria for selection of target, linear and convergent synthesis, retrosynthetic analysis involving chemoselectivity and regioselectivity. Use of acetylene and aliphatic nitro compounds in organic synthesis. Reversal of polarity (umpolung), importance of the order of events in organic synthesis. One group and two group C-X disconnections, two group C-C disconnections; Michael addition, Robinson annulation, Diels-Alder reaction, control in carbonyl condensation. Importance of order of events in organic synthesis. Cyclisation reactions for synthesis of cyclic molecules and amine synthesis.</p> <p><i>Brainstorming on identification of the retrosynthetic route of some recently FDA approved commercial drug molecules.</i></p> <p><i>Learning through peer discussion on order of events in organic synthesis.</i></p>	<b>CLO1</b>
<b>Unit-2</b>  <b>11 Hours</b>	<p><b>Enolate Chemistry:</b> Regio- and stereo-selectivity in enolate generation. “O” versus “C” alkylation, effect of solvent, counter-cation and electrophiles; symbiotic effect; thermodynamically and kinetically controlled enolate formations; various transition state models to explain stereoselective enolate formation; enamines and metallo-enamines; regioselectivity in generation, application in controlling the selectivity of alkylation.</p> <p><i>Group discussion on stereoselective generation of enolates and alkylation in organic synthesis.</i></p>	<b>CLO2</b>

<b>Unit-3</b>  <b>11 Hours</b>	<b>Protection and deprotection of various functional groups:</b> Protection of alcohols by ether, silyl ethers and ester formations and their deprotection. Protection of carbonyl group by acyclic and cyclic acetal, ketal, dithioacetals and dithioketals formation and their deprotection. Protection of 1,2-diols by acetal, ketal and carbonate formation and their deprotection. Protection of amines by acetylation, benzylation, benzyloxy carbonyl, <i>t</i> -butoxycarbonyl (Boc), fmoc, triphenyl methyl groups and their deprotection. Protection of carboxylic acids by ester formation and their deprotection: Recent advances in protection-deprotection free organic synthesis.  <i>Demonstration on the role of protecting groups in synthesis of commercial drugs.</i>	<b>CLO3</b>
<b>Unit-4</b>  <b>12 Hours</b>	<b>New synthetic reactions:</b> Baylis-Hillman reaction, Biginelli reaction, Mukaiyama aldol reaction, Mitsunobu reaction, McMurrey reaction, Julia-Lythgoe olefination, and Peterson's stereoselective olefination, Buchwald-Hartwig coupling, Eishenmosher-Tanabe fragmentation, Shapiro reaction, Stork-enamine reaction, Aza-Cope, Aza-Wittig reaction, Ugi reaction, Robinson–Gabriel synthesis, Vilsmeier–Haack reaction.  <i>Peer group discussion on well-established and newly developed synthetic approaches including recent variants and advantages associated with them.</i>  <i>Debate on various C-C and C-N bond forming and multicomponent reactions.</i>	<b>CLO3</b>

**Mode of Transactions:** Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming.

**Course Title: Practical Physical Chemistry**

**Paper Code: CHM.527**

**Total Contact Hours: 60**

**Learning Outcome:** The students will able to

L	T	P	Cr
0	0	4	2

**CLO1:** Develop skills on titrimetric analysis using conductivity meter, potentiometer and pH meter as well as buffer preparation and use.

**CLO2:** Hands on skills in viscometer, refractometer and spectrophotometer for different applications.

### Experiments:

1. Determination of behavior and strength of a given acid/base by titrating with a base/acid conductometrically.
2. Determination of solubility and solubility product of sparingly soluble salts (e.g., PbSO<sub>4</sub>, BaSO<sub>4</sub>) conductometrically.
3. Determination standard electrode potential of Fe<sup>2+</sup>/Fe<sup>3+</sup> system by potentiometer using potassiumpermanganate
4. Preparation of buffers and measurement of their pH.
5. Determination of stability constant for Cu(II)-glycinate complex using potentiometry.
6. Determination of pK<sub>a</sub> of acetic acid and H<sub>3</sub>PO<sub>4</sub> by potentiometric titration using NaOH.
7. Determination of Surface tension of a given liquid.
8. Determination of refractive indices (RI) of given liquids and determination of the concentration from RI.
9. Verification of the Lambert-Beer's law and determination of extinction coefficient
10. Determination of stability constant of Fe(III)-salicylic acid complex by spectrophotometer.
11. To verify Freundlich and Langmuir adsorption isotherms for adsorption of acetic acid on activated charcoal.

12. Determination of partition coefficient of iodine between water and octanol and determination of equilibrium constant of tri-iodide.
13. Determination of rate constant and energy of activation of hydrolysis of an ester
14. Determination of the rate constant for the oxidation of iodide ions by hydrogen peroxide studying the kinetics as an iodine-clock reaction.
15. Determination of thermal stability of biomacromolecules.

**Mode of Transactions:** Demonstration, Experimentation, handing instruments, Explanation of data

**Activity Based Learning:**

1. Demonstration and application of potentiometry, conductometry, spectrophotometry, viscometer and stalagmometer.
2. Team activity of practical and observation recording for kinetic and thermodynamic parameters for chemical reactions.

**Course Title: Computational and Structural Chemistry (Practical)**

**Paper Code: CHM.529**

**Total Contact Hours: 60**

**Learning Outcomes:** After completing this course, the learner will be:

**CLO1:** Skilled in various chemistry software needed for higher studies.

**CLO2:** Develop knowledge skills and understanding of structure elucidation of unknown compounds via spectral interpretation of  $^1\text{H}$ ,  $^{13}\text{C}$  NMR, IR, UV and Mass spectrum.

**CLO3:** Select and apply the data analytics to every process and analysis in chemistry, thereby bringing in quality control to his work in hand.

L	T	P	Cr
0	0	4	2

## Experiments:

ChemDraw, Chem-Sketch, Draw the structure of simple aliphatic, aromatic, heterocyclic organic compounds with substituents. Get the correct IUPAC name and prediction of  $^1\text{H}$ NMR signals.

Exposure to Softwares required for processing of raw FID NMR files, Molecular docking using Schrodinger/MOE Software or DFT studies using Gaussian software.

Single crystal structure solving of various compounds and complexes using X-Ray Diffraction (XRD) software Olex-2.

**Spectral interpretation:** Interpretation of UV, IR, NMR (1D & 2D-NMR) and mass spectrum.

**Combined Structure problems:** Exercises of structure elucidation of unknown compounds *via* combined spectral interpretation of IR, UV-vis,  $^1\text{H}$  and  $^{13}\text{C}$  NMR and mass spectra, along with two-dimensional NMR spectroscopy.

## Statistical Analysis Methods:

1. Determination of Detection limit, Quantitation limit and for instrumental method and method of analysis.
2. Determination of quality control parameters for a method of analysis.
3. Determination of Mean, Mode and Median, Skewness and Kurtosis, FWHM for chromatographic data.
4. Linear least square fitting for calibration of spectrometer
5. Non-Linear least square fitting for adsorption and kinetic data.
6. Determination of ANOVA for intralaboratory testing.
7. Error function and residual analysis of Linear and Non-linear least square fitting
8. Optimization of process and analysis using Factor analysis, Principle Component Analysis
9. Optimization of process using response surface methodology
10. Determination of charges, pKa and electrostatic free energy of enzymes and proteins using pKa calculation software.

**Course Title: Chemistry of Natural Products**

**Paper Code: CHM.575**

**Credits Hours: 45**

**Learning Outcome:** At the end of this course student will be able to

<b>L</b>	<b>T</b>	<b>P</b>	<b>Cr</b>
3	0	0	3

**CLO1:** Recognize various types of natural products and their importance.

**CLO2:** Identify various types of natural products including their properties, occurrence, structure and biosynthesis.

**CLO3:** Apply the knowledge of natural product synthesis in drug development.

Units/ hours	Content	Mapping with CLOs
Unit-1  11 Hours	<p><b>Terpenoids and Carotenoids:</b> Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Geraniol, Menthol and <math>\beta</math>-Carotene and biological activities.</p> <p><i>Importance of isoprene rule in the biosynthesis of terpenes through group presentation</i></p> <p><i>Advances of terpene based drugs through peer learning</i></p>	CLO1
Unit-2  11 Hours	<p><b>Alkaloids:</b> Nomenclature and physiological action, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, structure, stereochemistry, synthesis of the following: Ephedrine, Nicotine, Morphine Reserpine and general theory of biogenesis.</p> <p><i>Class room debate on theory of biogenesis of alkaloids</i></p> <p><i>Group project on structure-activity relationship based on alkaloid structures</i></p>	CLO2
Unit-3  11 Hours	<p><b>Steroids:</b> Occurrence, nomenclature, basic skeleton and stereochemistry, structure determination and synthesis of cholesterol, partial synthesis of testosterone and progesterone, chemical tests for steroids and biological activities.</p> <p><b>Coumarins and lignans:</b> Classification, isolation, stereochemistry, biological activity, biosynthesis and synthesis of lignans.</p> <p><i>Group presentation on biological importance of steroids and lignans</i></p> <p><i>Peer learning of pharmacophore model of natural products</i></p>	CLO2

<b>Unit-4</b>  <b>12 Hours</b>	<p><b>Plant pigments:</b> Occurrence, nomenclature and general methods of structure determination. isolation, synthesis and biological activities of anthocyanins, chlorophyll.</p> <p><b>Carbohydrates:</b> Introduction of sugars, structures of triose, tetrose, pentose, hexose, stereochemistry and reactions of glucose, conformation and anomeric effects in hexoses. Mono, di, oligo- and polysaccharides, separation and isolation, purification, structure determination, biological activity.</p> <p><i>Group presentation on biological importance of plant pigments</i></p> <p><i>Class room debate on structures and conformation of carbohydrates</i></p>	<b>CLO3</b>
--	--	-------------

**Mode of Transactions:** Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

**Course Title: Supramolecular Chemistry**

**Paper Code: CHM.580**

**Total Contact Hours: 45**

**Learning Outcome:** The students will acquire knowledge of

**CLO1:** Various supramolecular aspects of interaction between two chemical systems.

**CLO2:** Devising supramolecular systems based on complementarity and preorganizational requirements of host.

**CLO3:** Analyze design of hosts for functions based on supramolecular assembly using complementarity and preorganization.

**CLO4:** Interpret the basic designs of supramolecular machines.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>Unit 1</b>  <b>11 Hours</b>	<p><b>Introduction:</b> Definition and development of supramolecular chemistry, nature of binding interactions in supramolecular structures: ion-ion, ion-dipole, dipole-dipole, H-bonding, cation-<math>\pi</math>, anion-<math>\pi</math>, <math>\pi - \pi</math> and van der Waals interactions. Supramolecular chemistry in life, ionophores, porphyrin and other tetrapyrrolic macrocycles, coenzymes, neurotransmitters, DNA and biochemical self-assembly. Pre-organization and complementarity, receptors, nature of supramolecular interactions.</p> <p>Host-guest chemistry: synthesis and structure of crown ethers, lariat ether and podands, cryptands, spherands, calixarenes, cyclodextrins, cyclophanes, carcerands and hemicarcerands. Concepts of selectivity, macrocyclic, macrobicyclic synthesis and template effects.</p> <p><i>A group activity on design of complementary architectures with explanation of their utility.</i></p>	<b>CLO1</b>
<b>Unit 2</b>  <b>11 Hours</b>	<p><b>Cation Binding:</b> Binding Constant and its determination, concept of coordination chemistry, cation complexation using various preorganized host, soft ligands including N, S and P based macrocycles, Schiff's base, proton and ammonium ion complexation, carbon donor and <math>\pi</math>- acid ligands, siderophores.</p> <p><b>Anion Receptor:</b> Anion recognition and its biological relevance, concepts on anion host design, from cation to anion hosts- a simple change in pH, guanidinium- based receptors, neutral receptors, organometallic receptors, coordination interactions. Chromogenic and fluorogenic receptors, dosimeters, ion pair recognition and zwitterion recognition.</p> <p><i>Innovating receptor designs for challenging and emerging sensing application through team work and brainstorming.</i></p>	<b>CLO2</b>

<p><b>Unit 3</b> <b>11</b> <b>Hours</b></p>	<p><b>Molecular Self-assembly:</b> Supramolecular polymers: definition, kinetic and thermodynamic consideration of self-assembly. self-assembly molecules: design, synthesis and properties of the molecules, self-assembly by H-bonding, proteins and foldamers, DNA, catenanes, rotaxanes, molecular knot: topology and examples including trefoil and borromean rings, surfactants self-assembly, liquid crystals.</p> <p>Dendrimers structure and nomenclature, synthesis and characterization, supramolecular chemistry of dendrimers and its assembly, dendritic nanodevices</p> <p>Supramolecular polymers including amphiphilic block polymers and molecular imprinter polymers, biological self-assembly in amyloids, actins and fibrin, COF and supramolecular gels.</p> <p><i>Using supramolecular synthons for building self-assembled motif for purpose by peer learning.</i></p>	<p><b>CLO3</b></p>
<p><b>Unit 4</b> <b>12</b> <b>Hours</b></p>	<p><b>Supramolecular and Molecular Devices:</b> Supramolecular photochemistry and catalysis, molecular electronic devices: molecular electronic devices, molecular wires, molecular rectifiers, molecular switches and molecular logic gates, organics for photonics and electronics.</p> <p><b>Molecular Machines:</b> Molecular machine terminology and bio-inspiration, ratchet mechanism including pulsating and tilt mechanism, covalent and supramolecular motors and their controlling mechanisms, machines based on catenanes and rotaxanes. Applications as molecular walkers, switchable catalysts, surface analysis at molecular dimensions.</p> <p><i>Hands on exercise in groups to develop a theoretical design of a machine tool using organic synthons in supramolecular chemistry.</i></p>	<p><b>CLO4</b></p>

**Mode of Transactions:** Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

### Interdisciplinary Courses (IDCs)

**Course Title: Basic Perspectives in Inorganic Chemistry**

**Paper Code: CHM.515**

**Total Contact Hours: 30**

**Learning Outcome:** The student will be able to

**CLO1:** Become expert of the coordination chemistry of d-group elements and coordination of ions within living organisms.

**CLO2:** Know the environmental chemistry and metal hydrides as hydrogen energy source.

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mapping with CLOs
<b>Unit-1 7 Hours</b>	<b>Chemistry of d-block elements:</b> coordination chemistry, models and stereochemistry, theories, spectra and bonding.  <i>Group discussion and problem solve involving characteristics of transition metals and their compounds.</i>	<b>CLO1,</b>
<b>Unit-2 7 Hours</b>	<b>Role of ions in bioscience:</b> ionophores, porphyrin and other tetrapyrrolic macromolecules, coenzymes, neurotransmitters, metal binding to DNA.  <i>Brainstorming discussion about essential inorganic elements and their compounds in living organisms</i>	<b>CLO2</b>
<b>Unit-3 8 Hours</b>	<b>Metals in aqueous environment:</b> Introduction, environmental chemistry, environmental composition, chemical processes, complexes, metal speciation of calcium, copper and mercury, their behaviour in hydrosphere.  <i>Discussion on behaviour of metals and complexes in surrounding environmental sphere</i>	<b>CLO2</b>
<b>Unit-4 8 Hours</b>	<b>Hydrogen Energy:</b> Introduction, synthesis and structures of metal hydrides, coordination modes of hydrogen atom, hydrogen storage, H <sub>2</sub> evolution under solar energy, thermal energy and acidifications.  <i>Group discussion about current requirements and challenges of renewable energy resources.</i>	<b>CLO2</b>

**Mode of Transactions:** Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

**Course Title: Project Report**

**Paper Code: CHM.599**

**Total Contact Hours: 120**

**Learning Outcome:** The student would be able to

**CLO1:** Understand the lacunas in the methodology to experimentation.

**CLO2:** Independently plan and execute experiments in the laboratory set-up

**CLO3:** Analyze and interpret the results obtained through different experiments.

**CLO4:** Apply expertise and specific skills in the frontier area of research.

As per the defined objectives in the research proposal, the student would carry out his experimentation to achieve these goals. The student would get experiments evaluated by the supervisor regularly, wherein the progress of the student would be evaluated. Upon achieving the objectives of the synopsis, the project report will be prepared as per the university guidelines for PG diploma in Chemistry in consultation with the supervisor. Project would be verified for plagiarism and submitted for evaluation by committee.

**Course Title: Chemical Laboratory Techniques**

**Paper Code: CHM 584**

**Total Contact Hours: 120**

**Learning Outcome:** At the end of this course student will be able to

**CLO1:** Train the learners in the operation and maintenance of chemicals & common apparatus used in laboratories. Familiarize them to develop skills in common laboratory techniques; train them in the procedures of procurement and storage of laboratory equipment, apparatus, glass wares and chemicals; enable them to follow appropriate disposal procedures and safety measures required for chemistry laboratories.

**CLO2:** Enable them to follow appropriate disposal procedures and safety measures required for chemistry laboratories. It will produce well trained Staff /Technicians to work in chemistry labs, especially Pharma industries or other small scale industries.

**CLO3:** To provide knowledge to perform the basic and research experiments. To impart knowledge of all safety measures in the chemistry laboratory, proper disposal of chemicals,

L	T	P	Cr
0	0	8	4

chemical wastes and other waste materials; awareness about the handling of corrosive chemicals, lab accidents, fire extinguishers and other safety means; Knowledge of computer for proper organization and management of chemistry laboratories, minor electronic equipment, maintain lab record, inventory etc.

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>15 Hours</b>	<p><b>Introduction of Chemistry Lab:</b> General introduction of chemistry laboratory, common instruction for safe working in chemical laboratories,            Lab design, Storage, ventilation, lighting, fume, cupboard, arrangement of store, Safety provisions,            Organization of practical work, Maintenance of laboratory, equipment/ apparatus Cleaning of laboratories and preparation room.</p> <p><b>Introduction of Lab Apparatus:</b></p> <p><i>Glass apparatus</i> - Beaker, Test tube, boiling tube, funnel, separating funnel, filtration flask, round bottom flask, flat bottom flask, condenser Liebig flask, watch glass etc. measuring conical or condenser, petridish, desiccator.</p> <p><i>Volumetric Apparatus</i> - Measuring cylinder, burette, pipette, Volumetric flask, analytical balance, single-pan electronic balance/ electrical analytical balance etc.</p> <p><i>Miscellaneous apparatus</i>- Buchner funnel, Bunsen burner, burette stand, retort clamp, china dish/evaporating basin, wire gauze, cork borers, filter pumps, crucible, mohr clip, pipe clay triangle, pestle and mortar, sprit lamp, spatulas, thermometer, pH meter/pH paper etc. and laboratory centrifuge.</p> <p><i>Apparatus for heating:</i> Bunsen burner, water bath, oil bath hot plate, sand bath, hot air oven, heating mantle etc.</p> <p><i>Handling and storage of glass apparatus</i></p> <p><b>Solution Preparation:</b> Water as a solvent, types of water, solutions, components of a solution, types of solution, solubility, concentration of solutions: percentage, molarity, normality, molality (in ppm) calculation of masses and volumes for preparation of solutions solids, liquids.</p> <p><i>Group discussion on use of chemicals and problem solving of solution of different normality/concentrations.</i></p>	<b>CLO1,</b> <b>CLO2</b>
<b>Unit-2</b> <b>15 Hours</b>	<ol style="list-style-type: none"> <li>1. Handling of common laboratory equipment</li> <li>2. Cork boring experiment</li> <li>3. Calibration of volumetric glassware</li> <li>4. Weighing of chemicals using analytical balance</li> <li>5. Preparation of solutions, indicators and reagents.</li> <li>6. Preparation of buffer solutions and determination of their pH Values.</li> <li>7. Preparation of some organic compound and determination of their boiling point and melting point.</li> </ol> <p><i>Hand on experience of common laboratory and research equipment.</i></p>	<b>CLO1,</b> <b>CLO2</b>

<p><b>Unit-3</b></p> <p><b>15 Hours</b></p>	<p><b>Common Laboratory Techniques:</b></p> <p><i>Refluxing:</i> Apparatus with interchangeable ground glass joints (Quick fit),</p> <p><i>Filtration:</i> Techniques and filter media, filter paper, simple filtration,</p> <p><i>Recrystallization:</i> Choice of solvent and precautions with flammable solvents,</p> <p><i>Distillation:</i> recovery of solvents through partial distillation, distillation under reduced pressure, and</p> <p><i>Determination of Boiling Point</i></p> <p><b>Chemistry Laboratory Safety:</b></p> <p><i>Fire Hazards:</i> Causes of fires, classification of fires, fire prevention protocols and measures, fire alarms, fire escapes, fire Extinguishers and their uses.</p> <p><i>Chemical Hazards:</i> Classification and handling of hazardous chemicals, storage of chemicals, transfer from large containers</p> <p><i>Gas Hazards:</i> usage of LPG and CNG safer in the laboratory, detection and handling of Gas Leakage, health hazards of gases</p> <p><b>Use of Computer in Laboratory:</b> Hardware in computer, CPU, I/O devices, data input, data processing, data output, application MS office software and Internet.</p> <p><b>Stock and Inventory Control:</b> Arranging stock, locating and referencing, shelf arrangement of stock, order books, inventory.</p> <p><b>Files and Records</b></p> <p><i>Filing Systems-</i> Classification of files, filing methods, filing system for equipments and chemicals, filing of printed and written material, preparation of lab manuals.</p> <p><i>Records system :</i> Stock records, recording stock (used and misused), record of use of listed poisons, record of use of alcohol, record of breakages, information about equipment serial numbers, record maintenance, miscellaneous records.</p> <p><i>Activity 1:</i> Cleaning of laboratories and preparation room.</p> <p><i>Activity 2:</i> Classification of apparatus in store.</p> <p><i>Activity 3:</i> Cleaning of glassware.</p> <p><i>Activity 4:</i> Organization of practical work.</p> <p><i>Activity 5:</i> A brief report on Safety provisions in laboratories.</p>	<p><b>CLO1,</b></p> <p><b>CLO2</b></p>
---	--	--

	<i>Peer discussion on Laboratory Techniques and significance of records of experimental data</i>	
<b>Unit-4</b> <b>15 Hours</b>	1. Purification of aniline by distillation method 2. Crystallization of various compounds and their TLC study 3. Column chromatographic method for separation of compounds 4. Simple acid-base titration. 5. Preparation of distilled/deionized water. 6. Preparation of inorganic double salts. 7. Experiments based on chromatography Activity 1: Classification of chemicals in laboratory/store. Activity 2: Classification hazardous chemicals based on the information given on the labels. Activity 3: Preparation of comparative chart. Activity 4: To learn the use of a carbon dioxide fire extinguisher. Activity 5: Preparation of stock register on MS-Excel.  <i>Brainstorming discussion on various lab practicals.</i>	<b>CLO2,</b> <b>CLO3</b>

**Course Title: Intellectual Property Right**

**Paper Code: CHM.585**

**Total Lecture: 60**

L	T	P	Credits
4	-	-	4

**Learning Outcome:** After the completion of the course students will be able to

- CLO1:** Understand the importance of Intellectual Property Rights, its various types and scope for the protection of his/her novel creations.
- CLO2:** Critically analyse the inventiveness of his/her work over the prior art available.
- CLO3:** Think and develop ethical values regarding copyrights
- CLO4:** Familiar with various agencies and treaties regarding Intellectual Property Rights

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>14 Hours</b>	<p><b>Introduction:</b> Intellectual property and need for its protection, Intellectual Property Rights (IPR), Types of intellectual property; Industrial property &amp; copyrights and related rights. IPR in India and abroad, promotion and protection concepts</p> <p>Impact of IPR on development, health &amp; agriculture, IPR in biotechnology: New plant varieties, protection need and laws.</p>	<b>CLO1</b>
<b>Unit-2</b> <b>16 Hours</b>	<p><b>Patents:</b> characteristics of patent. Patentable and non-patentable inventions in India, patent applications and their types; specification and claims, granting of patent, Transfer Commercialization Related Aspects, Indian Patent Act 1970, and amendments, Opposition to the grant of patent applications and post grant oppositions processes.</p> <p><b>Trademarks:</b> Types, purpose and function of trademark, registration and protection aspects</p> <p><b>Industrial Designs:</b> Registration and protection.</p> <p><b>Geographical Indicators:</b> Geographical indicators and their protection, difference between geographical indication and trademark.</p> <p><b>Trade Secrets:</b> Advantages and limitations.</p>	<b>CLO1,</b> <b>CLO2</b>
<b>Unit-3</b> <b>15 Hours</b>	<p><b>Copyrights:</b> Copyrightable works; ownership of copyright; Exploiting Fair Use concept in copyright especially in academics and research. Infringement of copyright.</p> <p><b>Related Rights:</b> Difference between copyright and related rights, celebrity rights.</p> <p><b>Academic integrity:</b> Plagiarism and UGC regulations 2018, Plagiarism detection softwares.</p>	<b>CLO2,</b> <b>CLO3</b>

<b>Unit-4</b> <b>15 Hours</b>	<b>Organizations, agencies and Treaties:</b> Territoriality of IPR; International Conventions in IPR; Role of World Trade Organization (WTO) and World Intellectual Property Organization (WIPO), The patent corporation treaty (PCT), GATT (General Agreement on Tariff and Trade), TRIPs (Trade Related Intellectual Property Rights) agreement, TRIMS (Trade Related Investment Measures) and GATS (General Agreement on Trades in Services).	<b>CLO4</b>
----------------------------------	--	-------------

**Mode of Transaction:** Lecture, Demonstration, Lecture cum demonstration, Dialogue Mode, Experimentation, Problem solving, Seminar.

**Course Title: Modern Instrumental Methods**

**Paper Code: CHM.587**

**Total Contact Hours: 60**

**Learning Outcome:** After the completion of the course students will knowledge on

L	T	P	Cr
4	0	0	4

**CLO4:** Principles and analytical applications of modern instrumentation.

**CLO5:** Principles of various chromatography and their application for purification of compounds.

**CLO3:** Principles of various radioanalytical methods and application of different radioisotopes in industry

**CLO4:** Demonstration of various imaging techniques and hands-on training on several spectroscopic techniques

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>15 Hours</b>	<p><b>Principles and Instrumentation:</b> Analytical applications of following techniques: Atomic Absorption spectroscopy, Flame photometry, Inductively coupled plasma-Atomic Emission spectroscopy, Scanning Electron Microscopy.</p> <p><i>Peer discussion on principles of modern instrumentation.</i> <i>Classroom discussion on various analytical applications of modern instrumentation.</i></p>	<b>CLO1</b>
<b>Unit-2</b> <b>15 Hours</b>	<p><b>Chromatography:</b> Gas solid Chromatography, Gas liquid Chromatography, High performance liquid chromatography, ion exchange chromatography, paper chromatography, thin layer chromatography, column chromatography, gel permeation chromatography.</p> <p><i>Demonstration of chromatographic techniques in the laboratory.</i> <i>Classroom discussion on the principles of various chromatography for purification of compounds.</i></p>	<b>CLO2</b>
<b>Unit-3</b> <b>10 Hours</b>	<p><b>Radioanalytical Methods:</b> X-ray diffraction methods, Neutron activation analysis, isotope dilution analysis, Radiometric titrations, particle induced X-ray Emission, Use of radioisotopes - in industry, agriculture and physicochemical studies.</p> <p><i>Principles of various radioanalytical methods through classroom discussion.</i> <i>Application of different radioisotopes in industry through peer learning.</i></p>	<b>CLO3</b>
<b>Unit-4</b> <b>20 Hours</b>	<p><b>Imaging Techniques:</b> Electron Microscopy including TEM, STEM, and FESEM with dark field and bright field imaging.</p> <p><b>Industrial visits and Hands-on Training and demonstration practical based on following techniques:</b> HPLC, GCMS, NMR, FTIR, XRD, TGA, AAS and SEM.</p> <p><i>Demonstration of various imaging techniques.</i> <i>Hands-on training on several spectroscopic techniques.</i></p>	<b>CLO3</b>

**Mode of Transactions:** Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

**Course Title: Advanced Applied Practical Chemistry**

**Paper Code: CAC.551**

**Total Contact Hours: 60**

L	T	P	Cr
0	0	4	2

**Learning Outcome:** At the end of this course students will be able to

**CLO1:** Identify various reagents used for drying of solvents and their disposal.

**CLO2:** Compare various analytics for quality assessment of oils and fats.

**CLO3:** Separate and purify the desired product from an organic reaction.

**CLO4:** Characterize the synthesized organic compounds using various spectroscopic techniques

**CLO5:** Separate and purify the desired product from an organic reaction.

**CLO6:** Realize the impact of various coupling and click chemistry strategies for construction of value added chemicals.

**CLO7:** Biochemical, biophysical and structural characterizations of bio-macromolecules.

**Experiments:**

1. **Solvent Drying:** Use of sodium metal for drying of toluene and precautions while quenching the residual sodium. Drying of DCM using P<sub>2</sub>O<sub>5</sub> and safe disposal of residual P<sub>2</sub>O<sub>5</sub>.
2. **Synthesis:** Separation and purification of organic compounds by column chromatography, percentage yield calculation (any six)
  1. Preparation of dyes: Preparation of azo dyes, Fluorescein, Malachite green (any one)
  2. Estimation of Oils and Fats: (i) Saponification value of the given oil or fat sample (ii) Iodine value of a given oil.
  3. Extraction of essential oil: To extract the essential oils from some common plant parts.

4. Synthesis of aromatics and perfumery compounds: Methylcinnamate, Methyl anthranilate. Benzyl acetate, Coumarin, Pyrazole, Isoxazole (any two)
5. Synthesis of a FEMA-GRAS approved flavoring agent 4-vinylguaiacol *via* Knoevenagel-Doebner decarboxylation strategy.
6. Green Synthesis of antipyretic drug paracetamol.
7. Preparation of allylic alcohols *via* Baylis-Hillman reaction using DABCO as a catalyst and characterization through various spectroscopic techniques.
8. To study Buchwald-Hartwig reaction of aryl halide with an amine using Cu-based catalyst.
9. To study dehydration of benzylic alcohols using imidazolium based ionic liquid.
10. Synthesis of stilbenes *via* Heck coupling Strategy.
11. Synthesis of triazole *via* reaction of alkyne with azide (Huisgen cycloaddition).
12. To study the synthesis of Dialntin *via* benzylic acid rearrangement.
13. To study the Vielsmeyer Haack reaction of indole/acetophenones.
14. To study the rearrangement of benzopinacol into benzopinacolone.
15. To study the tree component coupling reaction for the synthesis of (any one)
  - (i) Dihydropyrimidinone (*via* Bignelli reaction)
  - (ii) Propargylamine (*via* A<sup>3</sup>- coupling)

## 2. Advanced Instrumentation Experiments:

1. Determination of concentrations of proteins and DNA using spectrophotometer
2. Structural analysis of amino acids and proteins using CD, NMR and Fluorescence spectrometer.
3. Study of thermal denaturation ( $T_m$  and  $\Delta H_m$ ) of proteins and DNA using UV-Visible spectrophotometer, CD spectrometer and DSC.
4. Measurement of zeta potential and sizes of nanoparticles by DLS
5. Determination of Michaelis-Menten ( $K_m$ ) constant in enzyme kinetics.
6. Particle size and hydrodynamic radii analysis for adsorbents, protein or nanoparticles
7. Measurement of affinity constant of metal complex or metal binding to protein by ITC

**Mode of Transactions:** Demonstration, PPT, videos, Lecture cum demonstration

**Course Title: Quality Control in Laboratory and Manufacturing**

**Code: CAC.553**

**Total Lectures: 45**

<b>L</b>	<b>T</b>	<b>P</b>	<b>Cr</b>
3	0	0	3

**Learning Outcome:** The students will be able to

**CLO1:** Demonstrate and apply the various statistical tools for the quality control of the analytical results and its implications to regulatory approvals.

**CLO2:** Demonstrate the use of regulatory requirements in laboratory recognition including USFDA Methods.

**CLO3:** Elucidate the good laboratory and manufacturing practices.

**CLO4:** Demonstrate various parameters for establishing the method validations for a particular instrument in Industrial set-up

Units/ hours	Content	Mapping with CLOs
<b>Unit I</b> <b>11 Hours</b>	<p>Statistical. Method of Least squares and weighted least squares formalism. Use of certified reference materials and procedures for interlaboratory comparisons. Definition of limits of detection and sensitivity, and concept of standard addition to assess matrix effects. Uncertainty Calculations.</p> <p><i>Statistical quality control would be understood through problem solving activity.</i></p>	<b>CLO1</b>
<b>Unit II</b> <b>12 Hours</b>	<p>Concept of Total Quality Management, philosophy of Good Manufacturing Practice (GMP), ISO 9000 and ISO 14798 (NABL Accreditation). Organization and personnel, responsibilities, training, hygiene, personnel records.</p> <p><b>Premises:</b> Location, design, plan layout, construction, maintenance of sterile areas, control of contamination. Equipment, selection purchase specifications, preventive maintenance of equipment, cleaning of equipment.</p> <p><i>Requirements of quality control in pharmaceutical manufacturing would be learnt through field visit.</i></p>	<b>CLO2</b>
<b>Unit III</b> <b>11 Hours</b>	<p>Quality control laboratory, Good Laboratory Practice (GLP), responsibilities of management, Study Director, Quality Assurance Unit, and Individual, routine controls, instruments, reagents, sampling plans, standard test procedures, protocols, non-clinical testing, controls on animal house, data generation and storage, quality control documentation, retention samples, records. Complaints and recalls, evaluation of complaints, recall procedures, related records and documents.</p> <p><i>Good laboratory practices would be understood with card game and peer learning.</i></p>	<b>CLO3</b>
<b>Unit IV</b> <b>11 Hours</b>	<p>Regulatory aspects of pharmaceutical and bulk drug manufacture. DRA, FDA, CPMP, ICH guidelines. Regulatory Aspects of Environmental and Food Testing USEPA, MoEF, MoFPI, AOAC guidelines. Validation: Qualification (IQ/PQ/OQ), validation and calibration of equipment's, Evaluation of Analytical data. Drug approval process, patent application and WHO certification.</p> <p><i>Regulatory requirements of various international and national governing bodies on quality laboratory and manufacturing would be understood through peer learning.</i></p>	<b>CLO2,</b> <b>CLO4</b>

**Mode of Transactions:** Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

**Course Title: Pharmaceutical Products**

**Paper Code: CAC.585**

**Credits Hours: 45**

**Learning Outcome:** The students will be able to

**CLO1:** Describe the medicinal importance of various herbal products.

**CLO2:** Identify various commercial processes relevant in oleo-chemical industry.

**CLO3:** Explore fats and oil as raw material for the synthesis of value added chemicals.

**CLO4:** Interpret and analyse perfumery for perfume based industry

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>12 Hours</b>	<p><b>Herbal Products:</b> General Properties, Chemistry, Phytoconstituents and bioactive constituents and medicinal importance</p> <p><b>Alkaloids Containing Herbal Drugs:</b> <i>Papaver somniferum</i> (morphine), <i>Rauwolfiaserpentina</i> (reserpine), <i>Atropa belladonna</i> (atropine), <i>Ephedra gerardiana</i> (ephedrine), biosynthesis of alkaloids.</p> <p><b>Terpenes Containing Herbal Drugs:</b> Lemon grass oil (citral and geraniol), <i>Artemisiaannua</i> (artemisinin) and <i>Taxusbaccata</i>, biosynthesis of terpenoids</p> <p><b>Phenolics containing Herbal Drugs:</b> <i>Vitisvinifera</i> (resveratrol), <i>Pterocarpusmarsupium</i> (Pterostilbene)</p> <p>Various Berry fruits (strawberry, cherry, raspberry etc.).</p> <p><i>Structures and biological activity of alkaloids and terpenoids through group presentations</i></p> <p><i>Group project on recent advances on natural product based drug development</i></p>	<b>CLO1</b>
<b>Unit-2</b> <b>11 Hours</b>	<p><b>Edible Oils and Fats:</b> General study of the quality assessment, hydrogenation of oils, rancidity, iodine value, acid value, saponification value, Reichert-Meissel value, Polenski value and Kirschner value, adulteration of oils and fats, modifications to produce specialty fats (structured fats, nutraceuticals). Essential fatty acids: <math>\omega</math>-3 and <math>\omega</math>-6 fatty acids.</p> <p><i>Group project on chemical composition of various oils and fats.</i></p>	<b>CLO2</b>
<b>Unit-3</b> <b>11 Hours</b>	<p><b>Soap:</b> Introduction, manufacturing process different types of soap and their composition, Recovery of glycerin from soap spent lye. Metathesis and co metathesis reactions of fats and oils and their application in oleo chemical industry. hydroformylation reaction, cracking of fatty acids and fatty acid esters.</p> <p><i>Group presentation on manufacturing process of different types of soap.</i></p>	<b>CLO3</b>
<b>Unit-4</b> <b>11 Hours</b>	<p><b>Cosmetics and Perfumes:</b> Cosmetic necessities: Protective and antimicrobials, Astringents; safety issues of cosmetics. Storage and preparation of herbal drugs for commercial market. Essential oils and their importance in cosmetic industries.</p> <p>Antiperspirants, artificial and natural flavours, colours and preservatives, artificial sweeteners.</p> <p><i>Peer learning on the recent research related to the impact of various preservatives and sugar substitutes on human health.</i></p>	<b>CLO4</b>

**Course Title: Bioinorganic and Biophysical Chemistry**

**Paper Code: CHM.553**

**Total Contact Hours: 45**

**Learning Outcome:** At the end of this course student will be able to

**CLO1:** Determine structure and biological functions of metalloproteins and enzymes.

**CLO2:** Classify metallobiomolecules on the basis of their functional properties.

**CLO3:** Analyze the role of metal ions in the biological system.

**CLO4:** Determine the factors that govern the thermodynamic and mechanical stability, folding, and dynamics of proteins.

**CLO5:** Interpret kinetics, thermodynamics, and mechanism of protein folding.

3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>Unit 1</b> <b>11 Hours</b>	<p><b>Inorganic Chemistry of Enzymes – I:</b> Metalloporphyrins: Hemoglobin and myoglobin, nature of heme-dioxygen binding, model systems, cooperativity in hemoglobin, structure and function of hemoglobin and myoglobin. Other iron-porphyrin biomolecules, peroxidases and catalases, cytochromes, cytochrome P450 enzymes, other natural oxygen carriers, hemerythrins, electron transfer. Biochemistry of iron, iron storage and transport, ferritin and transferrin.</p> <p><i>Brainstorming regarding structure-function relationship of heme and non-heme protein.</i></p>	<b>CLO1</b>
<b>Unit 2</b> <b>12 Hours</b>	<p><b>Inorganic Chemistry of Enzymes – II:</b> Metallothioneins: Ferredoxins, carboxypeptidase, carbonic anhydrase, blue copper proteins, superoxide dismutase and hemocyanins.</p> <p><b>Enzymes:</b> Structure and function, inhibition and poisoning vitamin B<sub>12</sub> and B<sub>12</sub> coenzymes metallothioneins, bio-inorganic chemistry of Mo and W.</p> <p><i>Comparison of the reactivity of Ferredoxins and artificial Iron-sulfur clusters.</i></p> <p><i>Peer group discussion on structure-function relationship of metallothioneins and metalloenzymes.</i></p>	<b>CLO2</b>
<b>Unit 3</b> <b>11 Hours</b>	<p><b>Metal Ions in Biological Systems:</b> Role of metal ions in replication and transcription process of nucleic acids. Biochemistry of calcium as hormonal messenger, muscle contraction, blood clotting, neurotransmitter, metals in the regulation of biochemical events.</p> <p><i>Group discussion on the significance of metal ions and non-metals in various diseases.</i></p>	<b>CLO3</b>
<b>Unit 4</b> <b>11 Hours</b>	<p><b>Biophysical Chemistry:</b> Principles of biophysical chemistry (pH, buffer, reaction kinetics, thermodynamics), physical principle of structure, function, and folding of proteins, conformations of proteins (Ramachandran plot, secondary, tertiary and quaternary structure; domains; motif and folds), determination of protein structures by spectroscopic methods (CD, FTIR, NMR), thermodynamics of protein folding by spectroscopic and calorimetric methods, protein conformational study by NMR and fluorescence spectroscopy.</p> <p><i>Demonstration of applications of spectroscopic and calorimetric techniques for biochemical and biophysical characterizations of macromolecules.</i></p>	<b>CLO4,</b> <b>CLO5</b>

**Mode of Transactions:** Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial.

**Course Title: Entrepreneurship**

**Paper Code: CAC.586**

**Total Hours: 30**

**Learning Outcomes:** On the completion of this course, students will be able

L	T	P	Cr
2	0	0	2

- CLO1:** To develop understanding about problems and prospects in entrepreneurship.
- CLO2:** To gain insights about entrepreneurial behaviour and skills.
- CLO3:** To understand the protection of innovation and intellectual property rights
- CLO4:** To develop understanding about writing business plan/project proposals & managing start-up issues.

Units/ hours	Content	Mapping with CLOs
<b>UNIT I</b> <b>7 Hours</b>	Entrepreneurial Structure; Nature, Characteristics, functions and its role in economic development, Entrepreneurship- problems and prospects in India Entrepreneurial Behaviour and Skills <i>Role of Entrepreneurship in economic development of India through peer group discussion.</i>	<b>CLO1</b>
<b>UNIT II</b> <b>7 Hours</b>	Role of industries/entrepreneur's associations and self-help groups, Funding opportunities for start-ups. Basic start-up problems, Preliminary contracts with the vendors, suppliers, bankers, principal customers. Contents of business plan/ project proposal  <i>Peer discussion on various start-ups and recent funding opportunities.</i>	<b>CLO2</b>
<b>UNIT III</b> <b>8 Hours</b>	<b>Intellectual property:</b> Concept of intellectual property, Industrial property: Patents, Trademarks, GI, copyrights and related rights. WTO, WIPO and various treaties: Trade related aspects of intellectual property rights (TRIPS), Trade related investment measures (TRIMS). Scope of Protection, Risks involved and legal aspects of Trade Secret Protection.  <i>Case studies on traditional knowledge and patent issues; Turmeric, Basmati and neem cases.</i>	<b>CLO3</b>
<b>UNIT IV</b> <b>8 Hours</b>	<b>Key business concepts</b> Business plans, market need, project management and routes to market. Chemistry in Industry, Current challenges and opportunities, role of chemistry in India and global economies. Use of hazardous chemicals in Industries and the Importance of development of cost-effective and green technology.  <i>Group presentations on the Importance of development of cost-effective and benign technologies.</i>	<b>CLO4</b>

**Mode of Transactions:** Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial

**Course Title: Organic Chemistry-III**

**Paper Code: CHM.552**

**Total Contact Hours: 45**

**Learning Outcome:** The students will be able to

**CLO1:** Interpret and demonstrate use of free radical chemistry for various coupling reactions including metal-free C-H bond activation/ functionalization.

**CLO2:** Apply various oxidizing and reducing reagents in a logical manner for their application in functional group transformation in organic synthesis.

**CLO3:** Compare the reactivity of smaller, five and six membered heterocyclic compounds and perform their synthesis.

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>11 Hours</b>	<p><b>Free radical reactions:</b> Types of free radical reactions, free radical substitution mechanism at an aromatic substrate, free radical rearrangement, neighbouring group assistance, reactivity for aliphatic and aromatic substrates at a bridgehead, Reactivity in the attacking radicals, the effect of solvents on reactivity, auto-oxidation. Coupling of alkynes and arylation of aromatic compounds by diazonium salts. Hunsdiecker Reaction, Coupling of Alkynes, Acyloin Condensation, Barton Nitrite Photolysis Reaction, Barton Decarboxylation. Recent trends in oxidative functionalization of C-H bond <i>via</i> free radical chemistry.</p> <p><i>Brainstorming on identification of free radical quenching reagents and role of free radicals in daily life.</i></p>	<b>CLO1</b>
<b>Unit-2</b> <b>11 Hours</b>	<p><b>Metal and non-metal mediated oxidation:</b> Mechanism, selectivity, stereochemistry and applications of oxidation reactions, Baeyer-Villiger, Oppenauer oxidation, oxidation reactions using DDQ, NBS, Pb(OAc)<sub>4</sub>, Selenium dioxide, PCC, PDC, Cr and Mn based reagents, phase transfer catalysis, Periodic acid, Ceric ammonium nitrate, OsO<sub>4</sub>, Swern oxidation, hydroboration, Sharpless asymmetric epoxidation, epoxidations using peracids. Recent approaches for oxidation using green oxidants.</p> <p><i>Demonstration on the synthesis and application of oxidizing agents like PCC. Peer discussion on green oxidizing agents.</i></p>	<b>CLO2</b>
<b>Unit-3</b> <b>11 Hours</b>	<p><b>Metal mediated reduction:</b> Mechanism, selectivity, stereochemistry and applications of catalytic hydrogenations using Pd, Pt and Ni catalysts (Lindlar, Rosenmund, Adam's catalysts), Wilkinson's catalyst, Clemmensen reduction, Wolff-Kishner reduction, Meerwein-Ponndorf-Verley reduction, dissolving metal reductions, Birch reduction, Reductions using metal hydride NaBH<sub>4</sub>, Luche reduction, NaBH<sub>3</sub>CN, L-selectride, K-selectride, NaBH(OAc)<sub>3</sub>, LiAlH<sub>4</sub>, DIBAL.</p> <p><i>Peer discussion on selective use and careful handling of reducing agents.</i></p>	<b>CLO2</b>

<b>Unit-4</b> <b>12 Hours</b>	<p><b>Heterocyclic Chemistry:</b> Systematic (Hantzsch-Widman system) and replacement nomenclature for monocyclic, fused and bridged heterocycles, aromatic heterocycle, non-aromatic heterocycle: bond angle and torsional strains and their consequences in small ring heterocycles, conformation of six-membered heterocycles.</p> <p><b>Three-membered and four-membered heterocycles:</b> aziridines, oxiranes, thiranes, azetidines, oxetanes.</p> <p><b>Five membered heterocycles containing two heteroatoms (S, N, O):</b> Diazoles (imidazole, pyrazole), triazoles, oxazoles and thiazoles.</p> <p><b>Benzo-fused five-membered heterocycles:</b> Indoles, benzofurans and benzimidazoles.</p> <p><b>Six-membered heterocycles:</b> Synthesis and reactions of coumarins, chromones.</p> <p><i>Debate on reactivity order, basic and aromatic character of five- and six- membered heterocycles containing one and two heteroatoms.</i></p>	<b>CLO3</b>

**Course Title: Applied Electrochemistry**

**Paper Code: CAC.554**

**Total Lectures: 45**

L	T	P	Cr
3	0	0	3

**Learning Outcome:** Upon completion of the course the student would be able to

**CLO1:** Elucidate the working and efficiency of Commercial electrochemical cells and Mechanism of Corrosion.

**CLO2:** Demonstrate and apply electrochemistry of bio/chemical origin in analysis of important analytes of biological relevance.

Units/ hours	Content	Mapping with CLOs
<b>Unit I 11 Hours</b>	Conversion and storage of electrochemical energy, maximum intrinsic efficiency of an electrochemical converter. physical interpretation of the Carnot efficiency factor in electrochemical energy converters. power outputs. Electrochemical generators (fuel cells): hydrogen oxygen cells, hydrogen air cell, hydrocarbon air cell, alkaline fuel cell, applications of fuel cells. <i>Brainstorming approaches to enhance efficiency of fuel cell and electrochemical devices.</i>	<b>CLO1</b>
<b>Unit II 12 Hours</b>	Electrochemical energy storage. Properties of electrochemical energy storage: measure of battery performance, charging and discharging of a battery, Classical batteries: (i) lead acid (ii) nickel-cadmium. Modern batteries: (i) nickel-metal hydride, (ii) lithium battery. <i>Efficiency of energy storage devices through peer learning. Hands-on model building of electrochemical devices based on sustainable national policies.</i>	<b>CLO1</b>
<b>Unit III 11 Hours</b>	Corrosion and stability of metals. Mechanism of the corrosion of the metals; thermodynamics and the stability of metals, corrosion current and corrosion potential -Evans diagrams. Measurement of corrosion rate: Inhibiting corrosion, Passivation. Structure of passivation films, mechanism of passivation. <i>Brainstorming the corrosion of metals and passivation technologies of the current world.</i>	<b>CLO1</b>
<b>Unit IV 11 Hours</b>	Bioelectrochemistry. Bioelectronics, membrane potentials, simplistic theory, modern theory, electrical conductance in biological organisms: enzymes as electrodes. kinetic of electrode process. Essentials of electrode reaction. Current density, overpotential, Tafel equation, Butler Volmer equation. <i>Applications of bio/chemical electrochemistry for sensing analytes of medical relevance through peer learning.</i>	<b>CLO2</b>

**Course Title: Organic Synthesis and Catalysis**

**Paper Code: CAC.559**

**Total Contact Hours: 45**

**Learning Outcomes:** The students will be able to

**CLO1:** Design various molecules of commercial and biological importance using sustainable catalysis and modern cross-coupling strategies.

**CLO2:** Understand and apply asymmetric transformations for the synthesis of chiral compounds.

**CLO3:** Apply various reagents and named reaction for the small scale fine chemical synthesis.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>Unit I 11 Hours</b>	<p><b>Sustainable Catalysis:</b> Replacing scarce metals with most abundant metals in earth's crust. Catalyst recycling, Heterogeneous catalysis, Phytomining for catalysts. Photocatalysis as an emerging tool, sustainable catalysis without metals, Catalysis for biomass valorisation. Catalysis for sustainable polymers. Cooperative catalysis. Catalytic processes and industrial applications of green chemistry.</p> <p><i>Group discussion on metal free methodologies and their relevance in pharmaceutical industries.</i></p>	<b>CLO1</b>
<b>Unit II 12 Hours</b>	<p><b>Asymmetric Catalysis:</b> Requirements for asymmetric catalysis and commercial examples (Chiral pools, chiral auxiliaries), methods of asymmetric induction – substrate, reagent and catalyst controlled reactions; determination of enantiomeric and diastereomeric excess; enantio-discrimination. resolution – optical and kinetic, chemo- regio- and stereoselective transformations, organocatalysis and enzymatic catalysis. Reactions using chiral Lewis and Bronsted acids.</p> <p><i>Purpose and importance of chirality in various biologically active compounds and drug molecules (recent stringent FDA guidelines regarding chiral drugs) through brainstorming.</i></p>	<b>CLO2</b>
<b>Unit III 11 Hours</b>	<p><b>Metal Catalysis and Cross coupling reactions:</b> Palladium catalyzed chemistry for C-C bond formation reaction, Heck coupling, Sonogashira coupling, Suzuki-Miyaura coupling, Negishi coupling; C-N bond formation reactions, copper catalyzed chemistry, synthesis <i>via</i> C-H activation, metal catalyzed reactions under microwave conditions, Solid supported reactions, Multicomponent reactions, Click Chemistry.</p> <p>Application towards synthesis of fine chemicals</p> <p><i>Peer group learning through presentation on the Industrial applications of various cross-coupling reactions for the synthesis of value added chemicals.</i></p>	<b>CLO1, CLO3</b>

<b>Unit IV 11 Hours</b>	<p><b>Organometallic compounds and their applications:</b> Organoboranes: Preparation of organoboranes viz hydroboration with <math>\text{BH}_3\text{-THF}</math>, dicyclohexylborane, disiamylborane, thexylborane, 9-BBN, Chiral organoboranes and their utility: diisopinocampheyl borane, alpine boranes. Metal catalysed hydroboration, functional group transformations of organoboranes: oxidation, protonolysis and rearrangements. formation of carbon-carbon-bonds viz organoboranes carbonylation. Organolithium, organozinc, organosilicon, and, organocopper compounds (Gilman reagent) and their applications for fine chemical synthesis.</p> <p><i>Expression of the views of the students on latest advancement in the area of organoboranes including stereochemical aspects through presentation.</i></p>	<b>CLO3</b>

**Course Title: Organotransition Metal Chemistry**

L	T	P	Cr
3	0	0	3

**Paper Code: CHM.576**

**Total Contact Hours: 45**

**Learning Outcome:** At the end of this course student will be able to

**CLO1:** The chemistry of transition metal complexes and compounds of transition metal-carbon multiple bonds

**CLO2:** Chemistry on alkyls and aryls of transition metals and fluxional organometallic compounds

**CLO3:** Workout on homogeneous catalysis with appropriate planning.

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>10 Hours</b>	<p><b>Compounds of Transition Metal-Carbon Multiple Bonds:</b> Metal Carbenes (Alkylidenes) and carbynes (alkylidynes) complex-synthesis, nature of bond, structural characteristics, nucleophilic and electrophilic reaction on the ligands, role in organic synthesis.</p> <p><i>Brainstorming on logistics behind formation and stability of various transition metals compounds.</i></p>	<b>CLO1</b>
<b>Unit-2</b> <b>15 Hours</b>	<p><b>Aliphatic Transition Metal Complexes:</b> Transition metal complexes with alkyl and unsaturated organic molecules, alkenes, alkynes, allyl, diene, dienyl, and trienyl complexes, preparations, properties, nature of bonding and structural features important reactions relating to nucleophilic and electrophilic attack on ligands and to organic synthesis.</p> <p><i>Group discussion on stability and reactivity of Main group element vs Transition metal complexes with alkyl and unsaturated organic molecules.</i></p>	<b>CLO2</b>
<b>Unit-3</b> <b>10 Hours</b>	<p><b>Aryls Transition Metal Complexes:</b> Types, routes of synthesis, stability and decomposition pathways, applications in organic synthesis.</p> <p><i>Discussion on recent variants of well-established transition metal catalyzed reactions.</i></p>	<b>CLO3</b>
<b>Unit-4</b> <b>10 Hours</b>	<p><b>Chemistry of Radioactive Materials:</b> Classification of nuclides, nuclear stability, atomic energy, types of nuclear reactions-fission and fusion, nuclear decay laws, radioanalytical techniques, biological applications of radioactive materials.</p> <p><i>Brainstorming discussion of nuclear reaction and atomic energy.</i></p>	<b>CLO3</b>

**Mode of Transactions:** Lecture, Demonstration, Lecture cum demonstration, Problem solving, Brainstorming, Tutorial.

**Course Title: Applied Polymer Chemistry**

**Paper Code: CAC.571**

**Total Lectures: 45**

**Learning Outcomes:** The student upon completion of the course would be able to

**CLO1:**Elucidate the different mechanisms of polymerization.

**CLO2:**Apply the various methods for determination of Number, weight and viscosity averaged molecular weights.

**CLO3:**Elucidate and demonstrate the processing of thermoplastic and thermosetting polymers.

**CLO4:**Apply the polymers for their use in biological and lifestyle applications.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>UNIT I</b> <b>13 Hours</b>	<p><b>Polymers Synthesis and Characterization:</b> Classification of polymers. Types of polymerization processes: Bulk, solution, suspension and emulsion polymerization, their advantages and disadvantages. Addition, radical, ionic, coordination and condensation polymerisation; their mechanism and role of initiator, chain transfer agent, solvent and inhibitor. Effect of structure of monomer on free-radical polymerization. Polymerisation conditions and polymer reactions. Polymerisation in homogeneous and heterogeneous systems. Method for reaction rate determination using Rotating disk method and Pulsed Laser Photolysis – Size exclusion chromatography (PLP-SEC).</p> <p><i>Learning use of various polymerization options by peer learning.</i></p>	<b>CLO1</b>
<b>UNIT II</b> <b>11 Hours</b>	<p><b>Polymer:</b> Significance of molecular weight of polymer. Polydispersive average molecular weight. number, weight and viscosity average weights. Measurement of molecular weights. End group, viscosity, light scattering, osmotic and ultracentrifugation methods. Chemical and spectroscopic analysis of polymers. X-ray diffraction study.</p> <p><b>Structure and properties:</b> Configuration of polymer chains. Crystal structure of polymers, morphology of crystalline polymers. Thermal analysis, tensile strength, fatigue, impact, tear resistance, hardness and abrasion resistance.</p> <p><i>Understanding of molecular weight characteristics of polymer would be carried out through problem solving. The effect of the polymer molecular weight and crystallinity on mechanical properties would be understood through peer learning.</i></p>	<b>CLO2</b>
<b>UNIT III</b> <b>11 Hours</b>	<p><b>Polymer structure and physical properties:</b> crystalline melting point <math>T_m</math>, melting points of homogeneous series, effect of chain flexibility and other steric factors, entropy and heat of fusion. The glass transition temperature, <math>T_g</math> relationship between <math>T_m</math> and <math>T_g</math>, effects of molecular weight, diluents, chemical structure, chain topology, branching and cross linking.</p> <p><b>Polymer Processing:</b> Plastics, elastomers and fibres. Compounding. Processing techniques, calendaring, die casting, rotational casting, film casting, injection moulding, blow moulding, extrusion moulding, thermoforming, foaming, reinforcing and fibre spinning.</p> <p><i>Factors responsible for the polymer processing would be brainstormed for shaping polymers.</i></p>	<b>CLO3</b>

<p><b>UNIT IV</b> <b>10 Hours</b></p>	<p><b>Applications of Polymers:</b> Properties of polyethylene, polyvinyl chloride, polyamides, polyesters, phenolic resins, epoxy resins and silicone polymers. Functional polymers, fire retarding polymers and electrically conducting polymers. Biomedical polymers, contact lens, dental polymers, artificial heart, kidney, skin and blood cells.</p> <p><b>Biopolymers:</b> The structure, function, and properties of synthetic (dextran, ficoll) and natural biopolymers (Cellulose, CMC, alginate, chitin, DNA, nucleic acids, nucleotides, proteins), conformation of nucleic acids (DNA, t-RNA, micro-RNA), molecular architecture for some biological structures such as collagen, tissue, silk, wool, and shell. Introduction to biomedical materials and drug delivery formulations.</p> <p><i>Understanding the limitations to sustainable polymer use through peer learning. Brainstorming session on biomedical applications in drug delivery and blood.</i></p>	<p><b>CLO4</b></p>
---	--	--------------------

**Course Title: Green and Industrial Organic Chemistry**

**Paper Code: CAC.572**

**Total Lectures: 45**

<b>L</b>	<b>T</b>	<b>P</b>	<b>Cr</b>
3	0	0	3

**Learning Outcomes:** At the end of the course student will be able to

**CLO1:** Design a reaction scheme taking into consideration its green and economical aspects

**CLO2:** Identify various industrial manufacturing processes for value added chemicals.

**CLO3:** Realize the importance of green chemistry and to apply various tools of green chemistry in their future research.

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>12 Hours</b>	<p><b>Green Chemistry:</b> Principles of green chemistry, atom economy, tools of green chemistry: green solvents (ionic liquids, supercritical fluids), abundant natural feedstocks/starting precursor, multicomponent reactions (MCRs), tandem/domino reactions, microwave assisted organic synthesis (MAOS), solid phase synthesis, aqueous media reactions, General introduction to Combinatorial Chemistry.</p> <p><i>Recyclability of ionic liquids through demonstration.</i> <i>Industrial applications of green solvents: peer discussion in the classroom</i></p>	<b>CLO1</b>
<b>Unit-2</b> <b>11 Hours</b>	<p><b>Applications of Green Chemistry:</b> Green synthesis of ibuprofen, design and use of CO<sub>2</sub>-surfactants for precision cleaning in industries, environmentally preferable marine antifoulant, use of molting accelerators in place of toxic and harmful insecticides, oxidant activators to replace chlorine-based delignification process in paper and pulp industry, green chemistry process for polyester regeneration, Biocatalytic promiscuity of enzymes for C-C bond formation. Recent applications of ionic liquids as solvent and catalysts in the chemical industry.</p> <p><i>Various green processes employed in chemical industries through group presentation.</i></p>	<b>CLO2</b>
<b>Unit-3</b> <b>11 Hours</b>	<p><b>Industrial Organic Syntheses:</b> The raw material and basic processes, chemical processes used in industrial organic synthesis: production of methanol, ethanol, ethyl acetate, ammonia, sulphuric acid, acetaldehyde, acetic acid, ethylene glycol, glycerine, acetone, phenol, formaldehyde, 1,3-butadiene and styrene.</p> <p><i>Peer discussion on industrial chemical manufacturing processes and current green alternative.</i></p>	<b>CLO2,</b> <b>CLO3</b>
<b>Unit-4</b> <b>11 Hours</b>	<p><b>Detergent:</b> Introduction, Principal groups of synthetic detergents, Classification of surfactants; anionic, cationic, amphoteric and non-ionic detergents, alkyl/aryl/ amide sulphonates, binders and builders, fillers, eco-friendly detergents: detergents containing enzymes and zeolites. Oleochemicals as source for surfactants: Methyl ether sulfonate (MES).</p> <p><i>Project work on the types of various detergents/surfactants present at home and their specific utility.</i></p>	<b>CLO2,</b> <b>CLO3</b>

**Course Title: Industrial Inorganic Chemistry****Paper Code: CAC.573****Total Lectures: 45****Learning Outcome:** The students will be able to**CLO1:** Elucidate the understanding of the semiconductors and electronics made from inorganic materials.**CLO2:** Elucidate the manufacturing of various fertilizers, electroplating processes and glasses and ceramics.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>10 Hours</b>	<p><b>Special Materials for Electronic Industry:</b> Recent trends in sensor technology, film sensors, Semiconductor IC technology, micro-electro mechanical systems (MEMS), nanosensors. Applications of Sensors: automobile sensors, home appliance sensor, aerospace sensors, sensors for manufacturing medical diagnostic sensors, sensors for environmental monitoring. High purity silicon, germanium, gallium arsenide (GaAs), indium phosphide (InP) etc. Preparation using zone refining, crystal growth and their use in electronic industry. High temperature materials, SiC, chromite, alumina, zirconia, magnesite etc.</p> <p><i>Group Discussion on sensors applications in current scenario.</i></p>	<b>CLO1</b>
<b>Unit-2</b> <b>15 Hours</b>	<p><b>Fertilizer Industries:</b> General principles of plant nutrition: essential plant nutrients, functions of the essential elements, classification of commercial nitrogenous fertilizers. Manufacturing of ammonium sulphate, urea, ammonium nitrate, commercial phosphatic fertilizers. Manufacturing process and properties of phosphatic fertilizers, single super phosphate, triple super phosphate. Commercial potassic fertilizers: chemicals of potassium compounds, classification, manufacturing process and properties of potassium fertilizer, potassium sulphate, mixed fertilizer. Micronutrients: role and deficiency symptom of micronutrients. Biofertilizers: classification, demands and production, present status of fertilizer industries in India.</p> <p><i>Demonstration on industrial scale synthesis of various fertilizers and use of fertilizers and pesticides in agriculture.</i></p>	<b>CLO1</b>
<b>Unit-3</b> <b>10 Hours</b>	<p><b>Metal Finish Technology:</b> Basics of electrodeposition, electroplating principles and practice, electrochemistry applied to electroplating, electroplating of metals chromium, cadmium, nickel, copper, silver, gold, purpose of metal electroplating composition and condition of plating bath, applications waste treatment and metal recovery.</p> <p><i>Peer discussion on electroplating techniques of different transition metals and their applications in water treatment.</i></p>	<b>CLO2</b>

<b>Unit-4</b> <b>10 Hours</b>	<b>Glass and Ceramics:</b> Physical and chemical properties of glasses, raw materials, manufacturing of special glasses. Ceramics and their properties, raw materials, manufacturing of ceramics, applications of colours to pottery, use of ceramics. Industrial gases: manufacturing and industrial uses of H <sub>2</sub> , O <sub>2</sub> , N <sub>2</sub> , CO <sub>2</sub> , Cl <sub>2</sub> and acetylene gases. Liquefaction of gases, production of low temperature. Chemicals of utility: inorganic fine chemicals, magnesia, alumina, AlCl <sub>3</sub> , calcium carbonate, sodium silicate, MnO <sub>2</sub> , FeSO <sub>4</sub> , PbO <sub>2</sub> and NaOH.  <i>Brainstorming session on generation of differ gas techniques with safety features.</i>	<b>CLO2</b>
----------------------------------	---	-------------

**Course Title: Dyes and Pigments**

**Paper Code: CAC.575**

**Total Contact Hour: 45**

L	T	P	Cr
3	0	0	3

**Learning Outcome:** Upon successful completion of the course the student will be able to apply the knowledge of

**CLO1:** Synthetic and natural pigments in various fields.

**CLO2:** Synthetic and natural dyes in various fields.

**CLO3:** Analysis and physical properties of pigments and dyes

Units/ hours	Content	Mapping with CLOs
<b>Unit-1</b> <b>11 Hours</b>	<p><b>Introduction of pigments:</b> Colour index, generic names of pigments, colour constitution number, polymorphism, properties required in a pigment and extender, dyes, pigment dyestuffs, and hue of the pigment (Bathochromic and hypsochromic shift), practices and requirement of pigments. Organic pigments - Antraquinone, Benzimidazolonedioxazines, Diazo lakes, Litholrubones, Monoazo lakes, Naphthol AS lakes, Naphthol AS, Perylenes, Phthalocyanines, Quinacridones effect pigments and biological pigments.</p> <p><i>Different structures and properties of pigments through peer learning.</i></p> <p><i>Group project on synthesis of azo pigments.</i></p>	<b>CLO1</b>
<b>Unit-2</b> <b>11 Hours</b>	<p><b>Classification and synthesis of dyes:</b> Colour theory of dyes, Various unit operations in the manufacture of intermediates and dyes, Introduction of various functional groups, synthesis of dyes, basics of azo dyes, diazotization and coupling reactions, azoic colours; vat dyes, reactive dyes, acid dyes, mono azo dye; diasazo, nitro, diphenylamine and anthraquinone dyes; acid mordant dyes, azo metal complex dyes, synthesis of different dyes. Nylon, Polyesters and Polyamides structures and names of dyes applied on each of them.</p> <p><i>Class room debate on colour theory of dyes.</i></p> <p><i>Group presentation on synthesis of various dyes.</i></p>	<b>CLO2</b>
<b>Unit-3</b> <b>12 Hours</b>	<p><b>Processing and synthesis of inorganic pigments and Raw materials for organic pigments:</b> Crushing and grinding, vaporization, co-precipitation, filtration, drying, flushing, calcinations/roasting, vapour phase oxidation etc. Pigments Extenders: Sources, manufacture, properties and uses of carbonates, sulphates and other extender pigments. White prime pigments: Methods of manufacturing, comparison of properties and composition of TiO<sub>2</sub>, ZnO, Zinc sulphide and lithopone, Surface treatment of TiO<sub>2</sub> and other pigments, A brief study of coal tar distillation and the role of distillation products in the manufacture of synthetic dyes: bases and precipitants used in the colour striking.</p> <p>Processing of raw materials for manufacturing of dyes and pigments</p> <p><i>Peer discussion on inorganic and organic pigments for application in daily life application.</i></p>	<b>CLO1</b>

<b>Unit-4</b> <b>11 Hours</b>	<b>Analysis of Dyes and Pigments:</b> Analysis of Dyes & Intermediates: Colour fastness, Light fastness, sublimation fastness, Paper Chromatography, Thin Layer Chromatography, Column Chromatography, Colour Matching Spectrophotometer, UV-visible Spectrophotometer. Analysis of Pigments: Crystal structure, particle size, shape and distribution, refractive index and hiding power, oil absorption, specific gravity, bulking value, reducing power, tinting strength, fastness properties such as resistance to light, heat, water, chemicals, bleeding etc. corrosion resistance, toxicity of pigments etc.  <i>Group projects on role of dyes and pigments in paint industries</i> <i>Peer learning on the importance of dyes in biological perspective.</i>	<b>CLO3</b>
----------------------------------	--	-------------

**Mode of Transactions:** Lecture, Demonstration, Presentation, Group Discussion, Lecture cum demonstration, Problem solving, Brainstorming

Units/ Hours	Content	Mapping with CLOs
<b>Unit 1</b> <b>11 Hours</b>	<p><b>Magnetic Materials (Ferrites):</b> Introduction, structure and classification, hard and soft ferrites, synthesis of ferrites by various methods (precursor and combustion method), characterization of ferrites by Mossbauer spectroscopy, significance of hysteresis loop and saturation magnetization in ferrites, magnetic properties of ferrites, applications of ferrites.</p> <p><b>Glasses, Ceramics, Composites and Nanomaterials:</b> Glassy state, glass formers and glass modifiers, applications. ceramic structures, mechanical properties, clay products. microscopic composites; dispersion-strengthened and particle-reinforced, fibre-reinforced composites, macroscopic composites, nanocrystalline phase, preparation procedures, special properties, applications.</p> <p><i>Learning through spherical three dimensional models based demonstration and reconstruction of the models for ferrites.</i></p>	<b>CLO1,</b> <b>CLO2,</b> <b>CLO3</b>
<b>Unit 2</b> <b>11 Hours</b>	<p>Mesomorphic behaviour, thermotropic liquid crystals, positional order, bond orientational order, nematic and smectic mesophases; smectic - nematic transition and clearing temperature - homeotropic, planar and sCHMieren textures, twisted nematics, chiral nematics, molecular arrangement in smectic A and smectic C phases, optical properties of liquid crystals. dielectric susceptibility and dielectric constants. lyotropic phases and their description of ordering in liquid crystals.</p> <p><b>Thin Films and Langmuir- Blodgett Films :</b> Preparation techniques; evaporation/sputtering, chemical process, sol gel etc. Langmuir – Blodgett (LB) films, growth technique, photolithography, properties and applications of thin and LB films</p> <p><b>Materials for Solid State Devices:</b> Rectifiers, transistors, capacitors –IV-V compounds, low–dimensional quantum structure; optical properties.</p> <p><i>Application of Langmuir-Blodgett Films and materials for solid state electronics through peer learning. Brainstorming the liquid crystals based electronics and its current applications.</i></p>	<b>CLO1,</b> <b>CLO2,</b> <b>CLO3</b>

<p><b>Unit 3</b> <b>11 Hours</b></p>	<p>Types of ionic conductors, Schottky and Frenkel Defects; Kronig-Vink Representation, thermodynamic characteristics, effect of doping on ionic conduction. Mechanism of ionic conduction, interstitial jumps (Frenkel) and vacancy mechanism with thermodynamic and geometric consideration. Superionic conductors including beta-alumina, NASICON, LISICON; phase transitions and mechanism of conduction in superionic conductors, applications of ionic conductors in fuel cell, batteries/cell, oxygen sensing.</p> <p><b>Molecular Conductor:</b> TCNQ-TTF organic conductor, Peierls Theorem, Polyacetylene, Polyphenylene, Polyaniline, Oligo(phenylenevinylene)s, oligo(phenyleneethynylene)s, oligo(thiophenevinylene), oligo(thiophene), polypyrrole, etc. and their applications in sensing, batteries/cell, photovoltaic cell, actuators, biomedical application.</p> <p><i>Understanding ionic/molecular conductors and their conduction mechanism through model construction.</i></p>	<p><b>CLO1,</b> <b>CLO2,</b> <b>CLO3,</b> <b>CLO4</b></p>
<p><b>Unit 4</b> <b>12 Hours</b></p>	<p><b>Fullerenes, Carbon Nanotubes and Graphene:</b> Types and Properties, methods of preparation and separation of carbon nanotubes, applications of fullerenes, CNTs and graphene.</p> <p><b>Nonlinear optical materials:</b> Non-linear optical effects, second and third order – molecular hyperpolarisability and second order electric susceptibility – materials for second and third harmonic generation.</p> <p><b>Preparation and characterization of silica and zirconia based stationary phases:</b> Preparation by (a) dynamic chemical modification, in which chiral selector is adsorbed on the surface of the zirconia by physical forces, (b) permanent chemical modification, in which a CS is chemically bonded onto the zirconia surface, and (c) physical screening. Difference between zirconia and silica based stationary phases, and their application in separations by Liquid Chromatography.</p> <p><i>Understanding the geometry of the carbon allotropes using models.</i></p>	<p><b>CLO1,</b> <b>CLO2,</b> <b>CLO3,</b> <b>CLO5</b></p>

**Course Code: FST.506**

**Course Title: Food Chemistry**

**Total Hours - 45**

**Course Learning Outcome (CLO):**

The completion of this course will enable learners to:

**CLO1:** Explain physicochemical properties of major and minor components of foods.

**CLO2:** Apply correct methods for estimating the moisture content of different foods.

**CLO3:** Critically analyse chemical and nutritional properties of carbohydrates, proteins and lipids.

**CLO4:** Critically evaluate the effect of processing on the properties of macro components of foods.

**CLO5:** Give recommendations on sources, functions, stability and requirements of vitamins and minerals.

L	T	P	Cr
3	0	0	3

<b>Units/ hours</b>	<b>Content</b>	<b>Mapping with CLOs</b>
<b>UNIT I 11 hours</b>	<p><b>Water:</b> Function; Types; Methods for measurement of total and available water in foods.</p> <p><b>Carbohydrates:</b> Classification; Occurrence; Properties and application of important polysaccharides such as starch, cellulose, guar gum, xanthan gum, pectin, etc.; Cellulose and derivatives (MCC, CMC, MC and HPMC); Starch digestibility and Glycaemic Index</p> <p><b>Learning Activities:</b> <i>Group discussions on role of water in food preservation.</i></p>	<b>CLO1, CLO2</b>
<b>UNIT II 11 hours</b>	<p><b>Proteins:</b> Classification; Physicochemical properties of proteins; Protein structure; Forces involved in stability of protein structure; Denaturation; Functional properties; Methods of protein analysis; Sources and functions of food proteins; Protein quality and its evaluation</p> <p><b>Learning Activities:</b> <i>Seminars on nutritive and functional properties of food proteins.</i></p>	<b>CLO3</b>
<b>UNIT III 11 hours</b>	<p><b>Lipids:</b> Classification; Functions of lipids (fat/oils) in foods; Flavour defects in lipids; Role of fats in human nutrition; Health problems associated with fats; Trans fats; Recommendations for fat intake; Non-food applications of oils and fats</p> <p><b>Learning Activities:</b> <i>Student seminars on rancidity and reversion of oils/fats.</i></p>	<b>CLO3, CLO4</b>
<b>UNIT IV 12 hours</b>	<p><b>Vitamins and minerals:</b> Sources, requirements, functions stability and toxicity of vitamins; General functions of minerals; Specific functions and requirements of Ca, P, Mg, Fe, Cu, Zn, Se, etc.</p> <p><b>Colour of foods:</b> Chlorophylls, curcumin, betalains, carotenoids, anthocyanins, etc.; Enzymatic and Non-enzymatic browning in foods.</p> <p><b>Learning Activities:</b> <i>Group discussions on importance of vitamins, minerals and natural food colourants.</i></p>	<b>CLO4, CLO5</b>

**Transactional Modes:**

Mode of transaction shall be Lecture, presentation, Dialogue, google forms/docs, Lecture-cum-demonstration, Seminar, discussion, e-content, etc.

**Tools used:**

PPT, YouTube Video, Google meet, NPTEL

**Course Code: BCH.509**

**Course Title: Bioanalytical Techniques**

**Total Hours: 45**

**Learning outcomes:** Students will be able to

**CLO1:** Demonstrate the utility of bioanalytical techniques.

**CLO2:** Apply the knowledge gained in this course to understand advanced concepts of biochemistry.

**CLO3:** Apply and effectively communicate scientific reasoning and data analysis in both written and oral forums related to bioanalytical techniques.

L	T	P	Cr
3	0	0	3

Units/ hours	Content	Mapping with CLOs
<b>Unit I 12 Hours</b>	<b>Spectrophotometry, Centrifugation and Biophysical Techniques:</b> Beer-Lambert's law, extinction coefficient and its importance, design of colorimeter, spectrometer and spectrophotometer. Visible and UV Spectroscopy and its applications; Sedimentation velocity and RCF, differential and density gradient centrifugation, subcellular fractionation, analytical and preparative ultracentrifugation techniques. Optical rotatory dispersion (ORD), Circular Dichroism (CD), X-ray diffraction, X-ray absorption, Nuclear magnetic resonance spectroscopy. Seminars on application of the techniques in bioscience research.	<b>CLO1</b>
<b>Unit II 10 Hours</b>	<b>Gel Electrophoresis:</b> Agarose gel electrophoresis for DNA and RNA analysis; Rocket electrophoresis; Polyacrylamide gel electrophoresis for DNA and protein analysis; IEF and SDS-PAGE. <b>Chromatography:</b> Principles and applications of different types of chromatography. Thin layer, ion-exchange, hydrophobic-interaction, size-exclusion, Adsorption, Partition, Ion-Exchange, Chromatofocusing, Reverse Phase, and affinity chromatography. Molecular weight determination of macromolecules (in particular proteins) by size exclusion chromatography. High performance liquid chromatography.  <i>Group discussion on the importance of gel electrophoresis and chromatography in biochemistry lab.</i>	<b>CLO1, CLO2</b>
<b>Unit III 12 Hours</b>	<b>Microscopy:</b> Principles and applications of Light, Phase-contrast and Electron- Microscopy, Scanning electron microscope, Transmission electron microscope and Immune electron microscopy. <b>Radioisotopic Tracer Techniques:</b> Detection and measurement of isotopes, Geiger-Müller, Scintillation Counter, Autoradiography, Fluorography, Applications in biology. Student seminars on application of the techniques in research and life.	<b>CLO1, CLO3</b>
<b>Unit IV 11 Hours</b>	<b>Immunological Techniques:</b> Measurement and Characterization of antigens and antibodies, Specificity and Cross reactivity, Precipitation and Agglutination reactions, Gel Diffusion, Immunoelectrophoresis, Ouchterlony, Radioimmunoassay, ELISA, Immunoblotting, Immunoprecipitation and co-immunoprecipitation, Application in Microscopy, Imaging-Immunohistochemistry and Flow cytometry. Peer group discussion on use of the immune-techniques in research and health care.	<b>CLO1, CLO3</b>

**Course Title: Dissertation Part-I**

**Paper Code: CAC.600**

**Total Contact Hours: 120**

**Course Outcome:** The student would be able to

**CLO1:** Investigate various aspects related to the chemistry problem.

**CLO2:** Generate interest in frontier areas of research in chemistry.

**CLO3:** Analyze the literature and bring forward the research gaps and propose hypotheses and tentative solutions.

Dissertation supervisor would be allocated at the start of the semester and entire dissertation would be undertaken in discussion with the supervisor. At the end of the semester the student has to prepare a research proposal/synopsis as per the university guidelines. Upon submission of the synopsis, the research proposal shall be evaluated based on a presentation of review of literature, research gap, objective, methodology and PERT Chart for the next semester for sections of experimental work and compilation of dissertation.

L	T	P	Cr

0	0	40	20

**Course Title: Dissertation Part-II**

**Paper Code: CAC.601**

**Total Contact Hours: 600**

**Learning Outcome:** The student would be able to

**CLO1:** Understand the lacunas in the methodology to experimentation.

**CLO2:** Independently plan and execute experiments in the laboratory set-up

**CLO3:** Analyze and interpret the results obtained through different experiments.

**CLO4:** Apply their expertise and specific skills in the frontier area of research.

As per the defined objectives in the research proposal/synopsis, the student would carry out his experimentation to achieve these goals. The student would get experiments evaluated by the supervisor regularly, wherein the progress of the student would be evaluated. Upon achieving the objectives of the synopsis, the dissertation would be prepared as per the university guidelines for M.Sc. Dissertation in consultation with the supervisor. Dissertation would be verified for plagiarism and submitted for evaluation by committee.

## Value Added Course (VAC)

**Course Title: Protein Chemistry**

**Paper Code: CHM.528**

**Total Contact Hours: 30**

**Learning Outcome:** The students will be able to interpret and analyze

**CLO1:** Structure and biological functions of proteins.

**CLO2:** The role of metals in biology

**CLO3:** Mechanism of protein folding

**CLO4:** The cause and treatment of neurodegenerative, iron metabolic disorder and diabetes.

L	T	P	Cr
2	0	0	2

Units/ hours	Content	Mappin g with CLOs
<b>Unit-1 8 Hours</b>	Buffers; Amino Acids; Proteins: Function and Structure, Protein synthesis; Protein engineering and protein/protein interactions.  <i>Group discussion regarding in-vivo and in vitro protein folding.</i>	<b>CLO1</b>
<b>Unit-2 7 Hours</b>	Structure and function of hemoglobin, myoglobin and transferrin; Iron metabolic disorders (anemia, Sickle cell anemia, thalassemia, hemochromatosis), Diabetes; Types of diabetes and its causes/prevention/treatment, Interlink between iron metabolic disorder and diabetes; Cancer and its causes/treatments.  <i>Brainstorming regarding the role of metals in health and diseases and interlink between iron metabolic disorder and diabetes.</i>	<b>CLO2</b>
<b>Unit-3 7 Hours</b>	Protein folding and misfolding, Determination of protein structures and folding intermediates; In vitro analyses of off-pathway aggregation and amyloid formation; Key chaperones and chaperonins;  <i>Peer group discussion on understanding how protein folds/misfolds and forms amyloid fibrillation and their treatment and diagnosis.</i>	<b>CLO3</b>
<b>Unit-4 8 Hours</b>	Practical implications in biotechnology; Special emphasis on human protein deposition diseases including Alzheimer's, Parkinson's and Huntington's disease.  <i>Demonstration of role of chaperones and peptides on preventing amyloid fibril formation in human natively disordered proteins.</i>	<b>CLO4</b>
