# **CENTRAL UNIVERSITY OF PUNJAB**

# M.Sc. in Chemical Sciences (Medicinal Chemistry)

Batch- 2024-26

Department of Pharmaceutical Sciences and Natural Products

# Graduate attributes for M. Sc. Chemical Sciences (Medicinal Chemistry)

Graduates will have quality-conscious service providing attribute by adopting the knowledge of spectral analysis and chromatographic techniques in manufacturing and R & D of drugs. They will be able to implement the role of Computer-Aided Drug Design (CADD) in the modern drug discovery & development process and its applicability in higher studies and at the industrial level. They will be able to apply the knowledge in process chemistry for the development of synthetic methodologies, including green chemistry, peptide chemistry, retro-synthesis for making the drugs affordable to the public. They will have the ability to create, select and apply appropriate techniques, resources and modern analytical tools to identify, formulate, and solve problems of medicinal chemistry and will develop attribute to become self-reliant in Active Pharmaceutical Ingredients (APIs) by the development of scale-up of APIs and intermediates, unit operations and industrial safety guidelines. Moreover, the program will help them make their career in academic, research, and industry.

## **Course Structure**

## SEMESTER 1

S. No.	Paper Code	Course Title		L	T	P	Cr
1.	CMC.506	Organic Chemistry-I	С	3	0	0	3
2.	CMC.507	Organic Synthesis-I (Practical)	SB	0	0	4	2
3.	CMC.508	Modern Spectral and Chromatography Techniques	С	3	0	0	3
4.	CMC.509	Spectral Analysis (Practical)	SB	0	0	4	2
5.	CMC.510	Medicinal Chemistry-I	С	3	0	0	3
6.	CMC 511	Chemistry of Natural Products	С	3	0	0	3
7.	CMC 512 Computer Applications		С	3	0	0	3
8.	XXX	Individualized Education Plan /tutorial	-	2	0	0	NCr
	C	opt any one course from following elec	tives				
9.	CMC.513	Current Trends in Organic Synthesis					
	CMC.514	Quantum Chemistry					
10.							
11.	11. CHM.509 Inorganic Chemistry-1						
12.	2. CHM.511 Physical Chemistry – I		DE	3	0	0	3
		Total		20	0	8	22

**C**: Core, **DE**: Discipline elective, **SB**: Skill based

L: Lectures T: Tutorial P: Practical Cr: Credits NCr: Non-credit

**MOOC:** MOOC may be taken up 40% of the total credit (excluding dissertation credits). MOOC may be taken in lieu of any course but content of that course should match minimum 70%.

## SEMESTER II

S. No. Paper Code		Course Title	Course Type	L	T	P	Cr
1.	CMC.521	Organic Chemistry-II	С	3	0	0	3
2.	CMC.522	Organic Synthesis-II- (Practical)	SB	0	0	4	2
3.	CMC.523	Fundamentals of Computer Aided Drug Design	С	3	0	0	3
4.	CMC.524	In silico Drug Design- (Practical)	SB	0	0	4	2
5.			С	3	0	0	3
6.	CMC. 526	Medicinal Chemistry-II	С	3	0	0	3

L: Lectures T: Tutorial P: Practical Cr: Credits NCr: Non-credit

**MOOC:** MOOC may be taken up 40% of the total credit (excluding dissertation credits). MOOC may be taken in lieu of any course but content of that course should match minimum 70%.

# **SEMESTER IV**

S. No.	Paper Code	Course Title	Course Type	L	Т	P	Cr
1	CMC.600	Dissertation Part-II	SB	0	0	40	20
		Total		0	0	40	20

Discipline elective, SB: Skill based
L: Lectures T: Tutorial P: Practical Cr: Credits

## **Examination Pattern**

Foundation,			Course Entrep Innova	sciplinary , Value Added, reneurship, tion and skill pment Courses
	Marks	Evaluation	Marks	Evaluation
Internal	25	Various methods	-	-
Assessment				
Mid-semester	25	Descriptive	50	Descriptive (70%)
test (MST)				Objective (30%)
End-semester	50	Descriptive (70%)	50	Descriptive (70%)
test (EST)		Objective (30%)		Objective (30%)

**Objective Questions-** one-word/sentence answers, fill-in the blanks, MCQs', and matching

**Descriptive Questions**- Short answer and essay type questions

**Internal assessment**- any two or more of the given methods: Surprise Tests, open book examination, assignments, term paper, etc.).

# **Evaluation Criteria for Practical**

Item	Practical Note book and continuous evaluation	Synopsis	Performance	Viva voce
Marks	40	10	20	30

# **Evaluation Criteria for Dissertation**

Dissertation Semester)	Propo	osal (Third	Dissertation	n (Four	th Semester)
	Marks	Evaluation		Mark s	Evaluation
Supervisor	50	Dissertation proposal and presentation	Supervisor	50	Continuous assessment (regularity in work, mid-term evaluation) dissertation report, presentation, final viva-voce
HoD and senior-most faculty of the department	50	Dissertation proposal and presentation	External expert, HoD and senior- most faculty of the departmen t	50	Dissertation report (30), presentation (10), final viva-voce (10)

Evaluation pattern similar to fourth semester dissertation will apply for internship where supervisor will award 50% marks and external co-supervisor, HoD and senior-most faculty will award 50% marks.

# Semester 1

Course Title: Organic Chemistry-I

Paper Code: CMC.506 Course Hours: 45h

L	T	P	Credits
3	0	0	3

# **Learning Outcomes:**

After completing this course, the learner will be able to:

CLO1: Describe and understand basic chemistry of elimination and addition reactions

CLO2: Describe disconnection approaches applied on synthetic strategies and mechanism prediction.

CLO3: Describe nomenclature and synthetic methodologies of heterocyclic systems

Units/Hours	Content	Mapping
		with course
		learning
		outcomes
Unit 1	Basic Aspects of Organic Chemistry: Organic	CLO1
10 Hours	intermediates: Carbocations, carbanions, free radicals, carbenes and nitrenes. Their method of formation, stability and synthetic applications. Types of reaction mechanisms and methods of determining them, Detailed knowledge regarding the reactions, mechanisms and their relative reactivity and orientations.	
	<b>Learning activities:</b> Learner will be engaged in Molecular models to explain the stability of organic intermediates	
Unit 2	Addition reactions a) Nucleophilic uni- and	CLO1
10 Hours	bimolecular reactions (SN1 and SN2) b) Elimination reactions (E1 & E2; Hoffman & Saytzeff's rule) c) Rearrangement reaction	
	<b>Learning activities:</b> Learner will be engaged in Molecular models to explain the	

	stereochemistry in elimination reactions	
IImit O	Country to the delegation Country to the	CLOS
Unit 3 10 Hours	<b>Synthetic methodologies:</b> Synthon, Synthetic equivalent, Functional group interconversion (FGI), Functional group addition, Functional group elimination, Criteria for selection of target, Linear and convergent synthesis, Retrosynthetic analysis and synthesis involving chemoselectivity, Regioselectivity, Reversal of Polarity (Umpolung), Synthesis of cyclic molecules, Strategic bond: Criteria for disconnection of strategic bonds, Importance of the order of events in organic synthesis. One group and two group C-X disconnections in 1,2-, 1,3-, 1,4 & 1,5- difunctional compounds, One group C-C disconnections, alcohol and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic nitro compounds in organic synthesis, Two group C-C disconnections, Diels-Alder reaction, 1,3-difunctionalised compounds, Control in carbonyl condensation, 1,5-difunctionalised compounds. <b>Learning activities:</b> Learner will be	
	engaged in Group discussion to explain disconnection approaches in synthesis	
Unit 4 15 Hours	Heterocyclic chemistry: Replacement and systematic nomenclature (Hantzsch-Widman system) for monocyclic, fused and bridged heterocycles, Aromatic heterocycle, Non-aromatic heterocycle: Bond angle and torsional strains and their consequences in small ring heterocycles. Conformation of six-membered heterocycles and their synthesis  (a) Three-membered and four-membered heterocycles: synthesis and reactions of aziridines, oxiranes, thiranes, azetidines, oxetanes and thietanes.  (b) Five membered heterocycles containing two heteroatoms (S,N,O): Diazoles, imidazole, pyrazole,oxazoles and thiazoles.	CLO3

(c) Benzo-fused five-membered and six membered heterocycles: Synthesis and reactions of indoles, benzofurans and benzimidazoles, benzothiazoles.

(d)Six-membered heterocycles with heteroatom: Synthesis and reactions of pyrylium salts and pyrones, coumarins,

pyrylium salts and pyrones, coumarins, chromones, pyridine, pyrimidine, *etc*.

**Learning activities:** Learner will be engaged in using ball and stick models and web mediated activity to explain heterocyclic Chemistry

Course Title: Organic Synthesis -I (Practical)

L	T	P	Credits
0	0	4	2

Paper Code: CMC 507 Course Hours: 60h

# **Learning Outcomes:**

After completing this course, the learner will be able to:

CLO1: Interpret stereochemistry of organic compounds

CLO2: Explain the handling, storage and disposal of hazardous chemicals and their Material safety data sheets (MSDS)

CLO3: Monitor the progress of chemical reactions by thin layer chromatography

CLO4: Purify a given organic compound through crystallization, fractional distillation or column chromatography

Practical	Content/Title	Mapping course learning outcome	with
1.	Awareness to various glassware and plasticwares used in the organic synthesis.	CLO1	
2.	Demonstration of Stereochemical aspects of the compounds through molecular models	CLO1	
3.	Awareness to handling, storage and disposal of hazardous chemicals and their Material safety data sheets (MSDS)	CLO2	
4.	Thin layer chromatography: Monitoring the progress of chemical reactions, identification of unknown organic compounds by comparing the R <sub>f</sub> values of known standards, preparative TLC for separation of mixtures		
5.	Purification of a given organic compound through crystallization, fractional distillation or column chromatography	CLO4	
6.	Organic Synthesis: Single or multi- steps synthesis of organic compounds. Aspects such as conversion, yield, selectivity, effluent treatment, atom economy, etc. should be paid attention. TLC should be used to monitor the reaction. (attempt any five)  a) Synthesis of an anticancer stilbene via Wittig reaction b) Synthesis of chalcones via Claisen-Schmidt condensation. c) Preparation of vanillyl alcohol from vanillin d) Reduction of 3-nitroacetophone using	CLO4	

NaBH<sub>4</sub>/LiAlH<sub>4</sub>

- e) Preparation of bromohydrin from methylstyrene
- f) Preparation of aniline from nitrobenzene
- g) Synthesis of ethyl *N*-butyl acetoacetate by A.E.E. condensation
- h) Cannizzaro reaction: 4-chlorobenzaldehyde as substrate.
- i) Preparation of Iodoxybenzoic acid (IBX) and its application in oxidation.
- j) Preparation of pyridine chlorochromate (PCC) and its application in oxidation.
- k) Multistep synthesis of phenytoin.

Course Title: Modern Spectral & Chromatographic Techniques

Paper Code: CMC.508 Course Hours: 45h

	L	Т	P	Credits
L	3	0	0	3

# **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Conceptualize general principle and theory of UV-Vis and IR and spectroflourimetry

CLO2: Describe the concept and instrumentation of NMR and Mass techniques

CLO3: Separate different constituents of mixture by chromatographic techniques

CLO4: Explain the Principle, thermal transitions and Instrumentation of DSC, DTA

and TGA

Units/Hours	Content	Mapping
		with course
		learning
		outcome
Unit I	UV-Visible spectroscopy	CLO1
12 Hours	Introduction, Theory, Laws, Instrumentation	
	associated with UV-Visible spectroscopy, Choice of solvents and solvent effect and Applications of UV-	
	Visible spectroscopy, Difference/ Derivative spectroscopy.	
	IR spectroscopy	
	Theory, Modes of Molecular vibrations, Sample handling, Instrumentation of Dispersive and Fourier-Transform IR Spectrometer, Factors affecting vibrational frequencies and applications of IR spectroscopy, Data Interpretation, Theory of NIR.  Spectroflourimetry Theory of Fluorescence, Factors affecting	
	fluorescence, Quenchers, Applications of fluorescence spectrophotometer, Instrumentation	
	<b>Learning activities:</b> Learner will be provided hands on training to different instruments like UV, IR and spectroflourimetry.	
Unit 2	NMR spectroscopy	CLO2
12 Hours	Quantum numbers and their role in NMR, Principle, Instrumentation, Solvent requirement in NMR,	

	Relaxation process, NMR signals in various compounds, Chemical shift, Factors influencing chemical shift, Spin-Spin coupling, Coupling constant, Nuclear magnetic double resonance, Brief outline of principles of FT-NMR and <sup>13</sup> C NMR, Applications of NMR spectroscopy  Mass Spectroscopy  • Principle, Theory, Instrumentation of Mass Spectroscopy, Different types of ionization like electron impact, chemical, field, FAB and MALDI, APCI, ESI, APPI Analyzers of Quadrupole and Time of Flight, Mass fragmentation and its rules, Meta stable ions, Isotopic peaks and Applications of Mass spectroscopy.  Learning activities: Learner will be provided NMR and mass spectra for the characterization of compounds.	
Unit 3	Chromatography	CLO3
11 Hours	Principle, apparatus, instrumentation, chromatographic parameters, factors affecting resolution, isolation of drug from excipients, data interpretation and applications of the following: Thin Layer chromatography, High Performance Thin Layer Chromatography, Ion exchange chromatography, Column chromatography, Gas chromatography, High Performance Liquid chromatography, Ultra High-Performance Liquid chromatography, Affinity chromatography, Gel Chromatography	
	<b>Learning activities:</b> Learner will be provided experience of chromatography by using different techniques like TLC, Column, HPLC, HPTLC and GC.	
Unit 4	Thermal Techniques	CLO4
10 Hours	Principle, thermal transitions and Instrumentation (Heat flux and power-compensation and designs), Modulated DSC, Hyper DSC, experimental parameters (sample preparation, experimental conditions, calibration, heating and cooling rates, resolution, source of errors) and their influence, advantage and disadvantages, pharmaceutical applications. Differential Thermal Analysis (DTA): Principle, instrumentation and advantage and	

disadvantages, pharmaceutical applications, derivative differential thermal analysis (DDTA). TGA: Principle, instrumentation, factors affecting results, advantage and disadvantages, pharmaceutical applications

**Learning activities:** Learner will be provided Web based learning to explain thermal techniques

**Course Title: Spectral Analysis (Practical)** 

L	T	P	Credits
0	0	4	2

Paper Code: CMC.509 Course Hours: 60h

## **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Develop knowledge skills and understanding of structure elucidation of unknown compounds *via* spectral interpretation of IR, UV

CLO2: Develop knowledge skills and understanding of structure elucidation of unknown compounds *via* spectral interpretation of <sup>1</sup>H, <sup>13</sup>C NMR, Mass

CLO3: Perform column, TLC, HPLC and GC-MS based experiments

CLO4: Develop knowledge skills and understanding of structure elucidation of unknown compounds *via* spectral interpretation of <sup>1</sup>H, <sup>13</sup>C NMR, UV, IR, Mass

#### Course content

Practical	Content/Title	Mapping with course learning outcome
1.	Estimation of elements and functional groups in organic natural compounds	CLO1
2.	Analysis of organic compounds by UV Vis spectrophotometer	CLO1
3.	Experiments based on Column chromatography	CLO3
4.	Experiments based on HPLC	CLO3
5.	Experiments based on Gas Chromatography	CLO3
6.	Characterization of organic compounds using TLC, melting point, <sup>1</sup> H, <sup>13</sup> C NMR, IR, UV and Mass.	CLO2, CLO4
7.	Isolation, characterization like melting point, mixed melting point, molecular weight determination, functional group analysis, co-chromatographic technique for identification of isolated compounds and interpretation of UV and IR data	CLO1, CLO3

Course Title: Medicinal Chemistry-I

Paper Code: CMC.510 Course Hours: 45h

L	T	P	Credits
3	0	0	3

# **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Interpret basics concepts of drugs, their effects and screening.

CLO2: Describe drugs interaction with various types of enzymes and receptors

CLO3: Conceptualize the process of drug discovery and its progress

Units/Hours	Content	Mapping with course learning outcome
Unit 1 10 Hours	History of drug discovery Introduction, Drug discoveries, Recent trends in drug discovery, Enzymes as drug targets, Membrane transporters as drug targets, Voltage-gated ion channels as drug targets  Learning activities: Learner will be engaged in group discussion to explain history of drug discovery	CLO1
Unit 2 11 Hours	Drug discovery: Stages of drug discovery, lead discovery; identification, validation and diversity of drug targets Biological drug targets Receptors, types, binding and activation, theories of drug receptor interaction, drug receptor interactions, agonist vs antagonists, artificial enzymes. Measurement and expression of drug effects Introduction, In-vitro experiments, Ex-vivo experiments, In-vivo experiments.  Learning activities: Learner will be explained about drug interaction and target through molecular modeling studies	CLO2
Unit 3 12 Hours	Prodrug Design and Analog design	CLO3

# Prodrug design

Basic concept, Carrier linked prodrugs/ Bioprecursors, Prodrugs of functional group, Prodrugs to improve patient acceptability, Drug solubility, Drug absorption and distribution, site specific drug delivery and sustained drug action. Rationale of prodrug design and practical consideration of prodrug design.

# Combating drug resistance

Causes for drug resistance, strategies to combat drug resistance in antibiotics and anticancer therapy, Genetic principles of drug resistance.

# **Analog Design**

Introduction, Classical & Non classical, Bioisosteric replacement strategies, rigid analogs, alteration of chain branching, changes in ring size, ring position isomers, design of stereo isomers and geometric isomers, fragments of a lead molecule, variation in inter atomic distance.

**Learning activities:** Learner will be engaged in Web based training to familiarize with prodrug and analog design

# Unit 4 12 Hours

Medicinal chemistry aspects of the following class of drugs, Systematic study, SAR, Mechanism of action and synthesis of new generation molecules of following class of drugs:

- a). Anti-hypertensive drugs, Psychoactive drugs, H1 & H2 receptor antagonist, COX1 & COX2 inhibitors, Antineoplastic and Antiviral agents.
- b). Stereochemistry and Drug action: Realization that stereo selectivity is a pre-requisite for evolution. Role of chirality in selective and specific therapeutic agents. Case studies, enantioselectivity in drug adsorption, metabolism, distribution and elimination.

**Learning activities:** Learner will be engaged in Group discussion to explain SAR, Mechanism of action and synthesis of drugs

CLO3

**Course Title: Chemistry of Natural Products** 

Paper Code: CMC.511 Course Hours: 45h

L	Т	P	Credits
3	0	0	3

# **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Describe categories, synthesis and biosynthesis of terpenoids

CLO2: Conceptualize the nomenclature, synthesis and structure of alkaloids

CLO3: Explain the occurrence, nomenclature and structural investigation of steroids

CLO4: Describe the isolation, purification and structural investigation of flavonoids

Units/Hours	Content	Mapping with course learning outcome
Unit 1	Terpenoids and carotenoids: Classification,	CLO1
12 Hours	nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule. Structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules: Geraniol, Menthol and $\beta$ -Carotene <b>Learning activities:</b> Learner will be engaged in molecular models to explain the structure and stereochemistry of terpenoids.	
Unit 2	<b>Alkaloids:</b> Definition, nomenclature and	CLO2
11 Hours	physiological action, occurrence, isolation, general methods of structure elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants. Structure, stereochemistry, synthesis and biosynthesis of the following: Ephedrine, Nicotine and Morphine  Learning activities: Learner will be able to explain chemical tests for the identification of plant alkaloids	
Unit 3 10 Hours	<b>Steroids:</b> Occurrence, nomenclature, basic skeleton and stereochemistry, Structure determination and synthesis of cholesterol, partial synthesis of	CLO3

	Testosterone and Progesterone, Chemical tests for steroids  Learning activities: Learner will be engaged in			
	molecular models to explain the structure and stereochemistry of steroids.			
Unit 4 12 Hours	<b>Flavonoids:</b> Introduction, isolation and purification of flavonoids, General methods of structural	CLO4		
	determination of flavonoids; Structural elucidation of quercetin  Chemistry of Carbohydrates			
	Introduction, classification, configuration and conformation, reactions of monosaccharides;			
	oxidation, reduction, osazone formation, chain shortening and chain lengthening, mutarotation, Structure elucidation and chemistry of Glucose			
	Learning activities: Learner will be provided spectral data for the identification of above-			
	mentioned natural compounds.

**Course Title: Computer Applications** 

Paper Code: CMC.512 Course Hours: 45h

L	T	P	Credits
3	0	0	3

# Learning outcomes:

Upon successful completion of this course, the student will be able to:

CLO1: Use different operating system and their tools easily.

CLO2: Use word processing software, presentation software, spreadsheet software and latex.

CLO3: Explain networking and internet concepts.

CLO4: Use computers in every field like teaching, industry and research.

Units/Hours	Content	Mapping
		with course learning
		outcome
Unit 1	Computer Fundamentals: Introduction to	CLO1
10 Hours	Computer, Input devices, Output Devices, Memory (Primary and Secondary), Concept of Hardware and Software, C.P.U., System bus, Motherboard, Ports and Interfaces, Expansion Cards, Ribbon Cables, Memory Chips, Processors, Software: Types of Software, Operating System, User Interface of popular Operating System, Introduction to programming language, Types of Computer.	
	<b>Learning activities:</b> Learner will be engaged in group discussion to understand fundamentals and type of computer	
Unit 2	Computer Network: Introduction to Computer	CLO2, CLO3
11 Hours	Network, Types of Network: LAN, WAN and MAN,	
	Topologies of Network, Internet concept, WWW.  Word Processing: Text creation and Manipulation;	
	Table handling; Spell check, Hyper-linking, Creating	
	Table of Contents and table of figures, Creating and	

	tracking comments, language setting and thesaurus, Header and Footer, Mail Merge, Different views, Creating equations, Page setting, Printing, Shortcut	
	keys.	
	<b>Learning activities:</b> Learner will be provided web-	
	based learning to understand computer network and	
	word processing	
Unit 3	<b>Presentation Tool:</b> Creating Presentations,	CLO4
12 Hours	Presentation views, working on Slide Transition,	
	Making Notes Pages and Handouts, Drawing and	
	Working with Objects, Using Animations, Running	
	and Controlling a Slide Show, Printing Presentations,	
	and Shortcut keys.	
	<b>Spread Sheet</b> : Entering and editing data in cell,	
	Basic formulas and functions, deleting or inserting	
	cells, deleting or inserting rows and columns, printing of Spread Sheet, Shortcut keys.	
	printing of Spread Sheet, Shortedt Keys.	
	Learning activities: Learner will be engaged in to	
	prepare power point presentation for their seminar	
	and dissertation	
Unit 4	Use of Computers in Education and Research:	CLO4
12 Hours	Data analysis tools, e-Library, Search engines related	
	to research, Research paper editing tools like Latex.	
	<b>Learning activities:</b> Learner will use e-library,	
	search engines for writing proposal and	
	manuscripts.

## **Elective courses**

Course Title: Current Trends in Organic Synthesis

Paper Code: CMC.513 Course Hours: 45h

L	T	P	<b>Credits</b>
3	0	0	3

# **Learning Outcomes:**

After completing this course, the learner will be able to:

CLO1: Explain the role of free radicals in chemical transformation

CLO2: Conceptualize the importance of organometallic compounds and their application

CLO3: Apply the knowledge of various reagents for the synthesis of target molecules and will also acquire knowledge of some important C-C, and C-N bond formation reactions

Units/Hours	Content	Mapping
		with course
		learning
		outcome
Unit 1	Free radical reactions	CLO1
11 Hours	Types of free radical reactions, free radical	
	substitution mechanism at an aromatic substrate,	
	neighbouring group assistance, Reactivity for	
	aliphatic and aromatic substrates at a bridgehead,	
	Reactivity in the attacking radicals, the effect of	
	solvents on reactivity, Allylic halogenation (NBS),	
	oxidation of aldehydes to carboxylic acids, auto-	
	oxidation. Coupling of alkynes and arylation of	
	aromatic compounds by diazonium salts.	
	Sandmeyer reaction, Free Radical Rearrangement,	
	Hunsdiecker reaction	
	<b>Learning activities:</b> Learner will be engaged in	

	Group discussion to explain free radical	
TImit O	reactions.	CLOC
Unit 2 12 Hours	Organometallic compounds Organoboranes: Preparation of Organobornaes viz hydroboration with BH3-THF, dicylohexyl borane, disiamyl borane, theryl borane, 9-BBN and disopincamphlyel borne, functional group transformations of Organo boranes-Oxidation, protonolysis and rearrangements. Formation of carbon-carbon-bonds vizorgano boranes carbonylation. Grignard reagents, Organo lithium, Organo zinc, Organo cadmium and Organo Copper Compounds, Organo silicon compounds for organic synthesis, Organopalladium and organostannous (Applications in coupling reactions).  Learning activities: Learner will be used webbased learning to understand organometallic	CLO2
	compounds and their uses	
Unit 3	Reagents in organic synthesis:	CLO3
12 Hours	Gilman'sreagent, Lithiumdiisopropylamide (LDA), Dicyclohexyl Carbodiimide (DDC), 1,3-Dithiane (Umpolungreagent), Trimethylsilyliodide, Bakersyeast, DDQ., Lead tetraacetate, Prevost Hydroxylation, Wilkinsion's catalyst, Phasetransfercatalysts: QuaternaryammoniumandP hosphoniumsalts, Crownethers, Merifield resin, Fenton's reagents, Ziegler-Natta catalyst, Lawson reagents, K-selecteride and L-selecteride, Sodium cyanoborohydride, 9-BBN, IBX, Manganese dioxide, Fetizon reagent, Dioxiranes, Ceric ammonium nitrate, Tebbe reagent, Corey-Nicolaou reagent, Mosher's reagent, use of Os, Ru, and Tl reagents.  Learning activities: Learner will be used web- based learning to understand the applications of reagents in organic synthesis	
Unit 4 10 Hours	New synthetic reactions: Baylis-Hillman reaction, Biginelli reaction, Mukaiyama aldol reaction, Mitsunobu reaction, McMurrey reaction, Julia-Lythgoe olefination, and Peterson's stereoselective olefination, Buchwald-Hartwig coupling, Eishenmosher-Tanabe fragmentation and Shapiro reaction, Stork-enamine reaction Aza-Cope, Aza-Wittig reaction, BINAL and BINAP assisted	CLO3

reactions. Ugi reaction, Robinson–Gabriel synthesis, Strecker amino acid synthesis Vilsmeier–Haack reaction, Wohl–Ziegler reaction.

**Learning activities:** Molecular models will be used to explain the stereochemistry of new synthetic reactions.

Course Title: Quantum Chemistry

L	T	P	Credits
3	0	0	3

Paper Code: CMC.514 Course Hours: 45h

# **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Describe quantum chemical description of chemical bonding, reactivity and their applications in molecular spectroscopy and inorganic chemistry

CLO2: Explain Electronic and Hamiltonian operators for molecules.

CLO3: Utilize Quantum chemical description of angular momentum and term symbols for a one and many-electron systems.

CLO4: Conceptualize Born-Oppenheimer approximation, the Pauli principle, Hund's rules, Hückel theory and the variation principle

Units/Hours	Content	Mapping with course learning outcome
Unit 1	Fundamental Background: Postulates of quantum	
12 Hours	mechanics, Eigen values and Eigen functions, operators, hermitian and unitary operators, some important theorems. Schrodinger equation-particle in a box (1D, 3D) and its application, potential energy barrier and tunneling effect, one-dimensional harmonic oscillator and rigid rotor, Particle in a Ring, Hydrogen Atom.  Learning activities: Learner will apply Schrodinger equation for particle in 1D and 3D	,
Unit 2	<b>Approximate Methods:</b> Perturbation theory for	CLO1
10 Hours	non-degenerate and degenerate states and its applications, Variation theorem and its application.  Learning activities: Web based approach will be used to explain perturbation and variation theory	
Unit 3 12 Hours	<b>Angular Momentum:</b> Ordinary angular momentum,	CLO3

	Eigen functions and Eigen values for angular momentum, Addition of angular momenta, Spin, Anti-symmetry and Pauli exclusion principle.  Electronic Structure of Atoms: Electronic configuration, Russell-Saunders terms and Coupling Schemes, Magnetic Effects: Spin-orbit Coupling and Zeeman Splitting, the self-consistent field method, Hartree-Fock SCF method for molecules.  Learning activities: Learner will apply Angular momentum and Pauli exclusion principle to solve numerical problems	
Unit 4 11 Hours	Born-Oppenheimer Approximation: LCAO-MO and VB treatments of the H <sub>2</sub> <sup>+</sup> and H <sub>2</sub> , Hybridization and valence MOs of H <sub>2</sub> O and NH <sub>3</sub> . Huckel Theory of acyclic and cyclic conjugated systems, Bond Order and Charge Density Calculations.  Learning activities: Learner will be engaged in webbased learning to explain Born-Oppenhelmer approximation concept	CLO4

## Semester -II

Course Title: Organic Chemistry-II

Paper Code: CMC.521 Course Hours: 45h

L	T	P	Credits
3	0	0	3

# **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Interpret the stereochemistry, spatial arrangement of atoms/groups and apply it on the course of reactions and mechanism prediction.

CLO2: Explain the chemical reactions in peptides

CLO3: Apply principle of photochemistry in various chemical transformations

Units/Hours	Content	Mapping
		with course
		learning
		outcome
Unit 1	Stereochemistry: IUPAC nomenclature of organic	CLO1
12 Hours	molecules, Elements of symmetry, Chirality,	
	Projection formulae [Fly wedge, Fischer, Newman	
	and Saw horse], Configurational and conformational	
	isomerism in acyclic and cyclic compounds;	
	Stereogenicity, stereoselectivity, enantioselectivity,	
	diastereoselectivity, racemic mixture and their	
	resolution, Configurational notations of simple	
	molecules, D/L, R/S, $E/Z$ and $cis/trans$	
	configurational notations, Threo and erythro	
	isomers, Methods of resolution, Optical purity,	
	Enantiotopic and diastereotopic atoms, groups and	
	faces, Stereospecific and stereoselective synthesis,	
	Asymmetric synthesis, Optical activity in the	
	absence of chiral carbon (biphenyls, allenes and	
	spiranes), Chirality due to helical shape,	
	Stereochemistry of the compounds containing	
	nitrogen, sulphur and phosphorus, Conformational	

	analysis of cyclic compounds such as cyclopentane,	
	cyclohexane, cyclohexanone derivatives, decalins,	
	1,2-; 1,3-, 1,4-disubstituted cyclohexane derivatives	
	and D-Glucose, Effect of conformation on the course	
	of rate of reactions, Effect of conformation on	
	reactivity, Conformation of sugars, strain due to	
	unavoidable crowding.	
	<b>Learning activities:</b> Learner will be engaged in	
	Molecular models and online modeling tools to	
	explain the stereochemistry of compounds	
Unit 2	Chemistry of peptides:	CLO2
11 Hours		
	a) Coupling reactions in peptide synthesis	
	b) Deignigles of solid whose moutides creathering	
	b) Principles of solid phase peptides synthesis, t-BOC and FMOC protocols, various solid	
	supports and linkers: Activation procedures,	
	peptide and bond formation, deprotection and	
	cleavage from resin, low and high HF cleavage	
	protocols, formation of free peptides and peptide	
	amides, purification and case studies, site-	
	specific chemical modifications of peptides.	
	specific efferment mounteactions of populaes.	
	c) Segment and sequential strategies for	
	solution phase peptide synthesis with any two	
	case studies	
	d) Side reactions in peptide synthesis: Deletion	
	peptides, side reactions initiated by proton	
	abstraction, protonation, over- activation and	
	side reactions of individual amino acids ide	
	reactions in peptide synthesis: Deletion peptides,	
	side reactions initiated by proton abstraction,	
	protonation, over- activation and side reactions of	
	individual amino acids.	
	<b>Learning activities:</b> Learner will be engaged in	
	practical's involving coupling,	
	protection/deprotection and coupling reactions for	
	peptide synthesis.	
Unit 3	<b>Photochemistry:</b> Franck-Condon principle,	CLO3
10 Hours	Jablonski diagram, Singlet and triplet states,	-
	Photosensitization, Quantum efficiency,	
	Photochemistry of carbonyl compounds, Norrish	
	type-I and type-II cleavages, Paterno-Buchi reaction,	
	type I and type II clearages, I aterilo Daein Icaction,	

	Photoreduction, Di $\pi$ – methane rearrangement.	
	Photochemistry of aromatic compounds, Photo-Fries	
	reactions of anilides, Photo-Fries rearrangement,	
	Barton reaction Singlet molecular oxygen reactions	
	Learning activities: Learner will be engaged in	
	web-based learning to explain photochemical	
	reactions	
Unit 4	Pericyclic Chemistry: Main features of pericyclic	CLO3
12 Hours	reactions, Classification of pericyclic reactions,	
	Thermal and photochemical pericyclic reactions.	
	Electrocyclic reactions: Conrotation and disrotation,	
	Electrocyclic closure and opening in 4n and 4n+2	
	systems. Woodward-Hoffmann selection rules for	
	electrocyclic reactions. Explanation for the	
	mechanism of electrocyclic reactions by (i)	
	symmetry properties of HOMO of open chain	
	partner (ii) Conservation of orbital symmetry and	
	orbital symmetry correlation diagrams and (iii)	
	Huckel-Mobius aromatic and antiaromatic	
	transition state method. Examples of electrocyclic	
	reactions.	
	Cycloaddition reactions: Suprafacial and	
	antarafacial interactions. $\pi^2 + \pi^2$ and $\pi^4 + \pi^2$	
	cycloadditions. Cycloreversions. Stereochemical	
	aspects in supra-supra, supra-antara, antara-supra	
	and antara-antara $\pi^2$ + $\pi^2$ and $\pi^4$ + $\pi^2$	
	cycloadditions. Diels-Alder reaction. Woodward-	
	Hoffmann Selection rules for cycloaddition	
	reactions.	
	Sigmatropic reactions: [1,j] and [i,j] shifts;	
	Suprafacial and antarafacial shifts; Selection rules	
	for [lj] shifts; Cope and Claisen rearrangements	
	Learning activities: Learner will be engaged in	
	web-based learning to explain cycloaddition,	
	electrocyclic and sigmatropic reactions.	
	decirocyclic and signianopic reactions.

Course Title: Organic Synthesis-II (Practical)

Paper Code: CMC.522 Course Hours: 60h

L	T	P	Credits
0	0	4	2

## **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Differentiate mixture of *ortho* and *para* as well as cis/trans mixture by column chromatography

CLO2: Describe Multi-Step Synthesis of Organic Compounds

CLO3: Identify compounds *via* combined spectral interpretation of <sup>1</sup>H, <sup>13</sup>C NMR, IR, UV and Mass along with 2-D NMR spectra.

Practical	Content/Title	Mapping with course learning outcome
1.	Separation and purification of organic compounds by column chromatography: Separation of mixture of <i>ortho</i> and <i>para</i> mixture and cis/trans mixture. The column chromatography should be monitored by TLC.	CLO1
2.	<ul> <li>Multi-Step Synthesis of Organic Compounds: The Learning activities should illustrate the use of organic reagents and may involve purification of the products by chromatographic techniques. (Any five)</li> <li>a) Synthesis of isoxazole derivatives via 1,3-dipolar cycloaddition.</li> <li>b) Synthesis of pyrazole derivatives from chalcones.</li> <li>c) Synthesis of an antihypertensive drug-propranolol via epoxide ring opening reaction.</li> <li>d) Synthesis of Diltiazem (a calcium channel blocker) via Darzen condensation, a key step in its synthesis.</li> <li>e) Protection and deprotection of alcohols and amines.</li> <li>f) Preparation of Triphenyl Carbinol from</li> </ul>	CLO2

	Bromobenzene (Grignard's reaction)  g) Preparation of allylic alcohols via Baylis-Hillman reaction using DABCO as a catalyst under neat condition and their characterization through various spectroscopic techniques.
	<ul> <li>h) Preparation of homoallyl alcohols via Barbier type reaction under aqueous condition using Indium as a catalyst.</li> <li>i) Suzuki reaction of 3,4-dimethoxy phenyl boronic acid with aryl halides using Pd(PPh<sub>3</sub>)<sub>4</sub> as a catalyst.</li> </ul>
3.	Exercises on identification of compounds <i>via</i> combined spectral interpretation of <sup>1</sup> H, <sup>13</sup> C NMR, IR, UV and Mass along with 2-D NMR spectra.

	QSAR: Physiochemical parameters and methods to	
	calculate physiochemical parameters: Hammett	
	equation and electronic parameters (sigma),	
	lipoiphilicity effects and parameters (log P, pi-	
	substituent constant), steric effects (Taft steric and	
	MR parameters) Experimental and theoretical	
	approaches for the determination of these	
	physiochemical parameters. Hansch analysis, Free	
	Wilson analysis and relationship between them,	
	Advantages and disadvantages: Deriving 2D-QSAR	
	equations. 3D- QSAR approaches and contour map	
	analysis. Statistical methods used in QSAR analysis	
	and importance of statistical parameters.	
	<b>Learning activities:</b> Learner will be engaged in	
	group discussion to explain 2D-QSAR, 3D-QSAR	

	and importance of statistical parameters	
Unit 2	Molecular Modeling and Docking:	CLO2
11 Hours	a) Molecular and Quantum Mechanics in drug design. b) Energy Minimization Methods: comparison between global minimum conformation and bioactive conformation. c) Molecular docking and drug receptor interactions: rigid docking, flexible docking and extra-precision docking. Agents acting on enzymes such as DHFR, HMG-CoA reductase and HIV protease, choline esterase (AchE & BchE)  Learning activities: Learner will be engaged in molecular modeling of compounds	
Unit 3	Molecular Properties and Drug Design:	CLO3
10 Hours	<ul> <li>a) Prediction and analysis of ADMET properties of new molecules and its importance in drug design.</li> <li>b) De novo drug design: Receptor/enzyme-interaction and its analysis, Receptor/enzyme cavity size prediction, predicting the functional components of cavities, Fragment based drug design.</li> </ul>	
	c) Homology modelling and generation of 3D-structure of protein.	
	<b>Learning activities:</b> Learner will study Molecular model to explain interactions between ligand and drug target	
Unit 4	Pharmacophore Mapping and Virtual Screening:	CLO2, CLO3
12 Hours	Concept of pharmacophore, pharmacophore mapping, identification of Pharmacophore features and Pharmacophore's modelling; Conformational search used in pharmacophore mapping. In-silico Drug Design and Virtual Screening Techniques. Similarity based methods and Pharmacophore based screening, structure based In-silico virtual screening protocols.	
	<b>Learning activities:</b> Learner will be engaged in Pharmacophore band structure based <i>In-silico</i> virtual screening protocols

Course Title: In silico Drug Design - Practical

 L
 T
 P
 Credits

 0
 0
 4
 2

Paper Code: CMC.524 Course Hours: 60h

## Learning outcome:

After completing this course, the learner will be able to:

CLO1: Determine log P, MR, hydrogen bond donors and acceptors of selected drugs using softwares

CLO2: Calculate ADMET properties of drug molecules and its analysis using software's

CLO3: Describe Pharmacophore modeling

CLO4: Perform 2D and 3D-QSAR based experiments

CLO5: Perform virtual screening and Homology Modelling based experiments

#### **Course content:**

Following practicals utilizing the available softwares such as ChemBio Draw, Autodock, Schrodinger, or any other online freeware, etc. need to be conducted.

Practical	Content/Title	Mapping with
		course
		learning
		outcome
1.	Determination of log P, MR, hydrogen bond donors and	CLO1
	acceptors of selected drugs using softwares	
2.	Calculation of ADMET properties of drug molecules	CLO2
	and its analysis using softwares	
3.	Pharmacophore modeling	CLO3,
4.	2D-QSAR based experiments	CLO4,
5.	3D-QSAR based experiments	CLO4
6.	Docking study-based experiment	CLO5
7.	Virtual screening based experiment	CLO5
8.	Homology Modelling based experiments.	CLO5
9.	Practical based on 2D and 3D-QSAR of drug molecules.	CLO4

10.	Docking and virtual screening-based experiments.	CLO5

Course Title: Advanced Spectral Analysis

Paper Code: CMC.525 Course Hours: 45h

L	T	P	Credits
3	0	0	3

# Learning outcome:

After completing this course, the learner will be able to:

CLO1: Describe the applications of UV, IR and Raman spectroscopy

CLO2: Explain the 1D and 2D NMR analysis of different compounds

CLO3: Conceptualize the different rules of mass fragmentation

CLO4: Describe chromatographic techniques for separation and quantification of drugs

Units/Hours	Content	Mapping with course learning outcome
Unit 1 10 Hours	<b>UV and IR spectroscopy:</b> Wood ward – Fisher rule for 1,3- butadienes, cyclic dienes and carbonyl compounds and interpretation compounds of enones.	CLO1
	<b>Infrared spectroscopy</b> : IR Interpretation of organic compounds, NIR Applications.	
	Raman Spectroscopy: Introduction, Principle, Instrumentation and Applications.	
	Learner will calculate λmax for conjugated diene and enone derivatives	
Unit 2 10 Hours	<b>NMR spectroscopy:</b> 1-D and 2-D NMR, NOESY and COSY, HECTOR, INADEQUATE techniques, Interpretation of organic compounds.	CLO2
	<b>Learning activities:</b> Learner will be provided spectra for the identification of compounds	
Unit 3	a. Mass Spectroscopy: Mass fragmentation and its	CLO1,
15 Hours	rules, Fragmentation of important functional	CLO2, CLO3
	groups like alcohols, amines, carbonyl groups	
	and alkanes, Meta stable ions, Mc Lafferty	
	rearrangement, Ring rule, Isotopic peaks,	

	Interpretation of organic compounds.			
	b. Spectral Characterization of the following			
	compounds by spectroscopic techniques: UV,			
	IR, MS, NMR (1H, 13C) a) Carvone, Citral,			
	Menthol b) Luteolin, Kaempferol c) Nicotine,			
	Caffeine d) Glycyrrhizin			
	<b>Learning activities:</b> Students will develop advanced skills in data interpretation and problemsolving through the rigorous analysis of spectral data acquired from UV, IR, MS, and NMR experiments conducted on natural products.			
Unit 4 10 Hours	Chromatography: Principle, Instrumentation and Applications of the following: a) GC-MS b) GC-AAS c) LC-MS d) LC-FTIR e) LC-NMR f) CE-MS g) High Performance Thin Layer chromatography h) Super critical fluid chromatography i) Ion Chromatography j) I-EC (Ion-Exclusion Chromatography) k) Flash chromatography			
	Learning activities: Learner will be engaged in Learning experience of chromatography by using different techniques like TLC, Column, HPLC, HPTLC and GC

Course Title: Medicinal Chemistry-II

Paper Code: CMC.526 Course Hours: 45h

L	T	P	Credits
3	0	0	3

# Learning outcome:

After completing this course, the learner will be able to:

CLO1: Interpret basics concepts of drugs, their effects and screening.

CLO2: Describe drugs interaction with various types of enzymes and receptors

CLO3: Conceptualize the mechanism of action and SAR studies of drug molecules.

Units/Hours	Content	Mapping with course
		learning
		outcome
Unit 1	Physicochemical and stereochemical aspects: In	CLO1
12 Hours	relation to biological activity, Drug receptor	
	interaction, Adrenergic hormones and Drugs including biosynthesis, storage, release and	
	metabolism of catecholamines (Adrenaline,	
	Isoprenaline, Salbutamol, Amphetamine,	
	Naphazoline), Cholinergics and Anticholinesterases	
	including biosynthesis, storage and metabolism of	
	acetylcholine (Methacholine Chloride, Neostigmine	
	Bromide), Antiparkinsonism Drugs (Apomorphine).	
	Learning activities: Learner will be engaged in	
	Web based learning to study Physicochemical	
Unit 2	and Stereochemical aspect of drugs  Neuromuscular blocking agents: Gallamine	CLO2
12 Hours	Triethiodide, Succinylcholine chloride,	CLOZ
12 110415	Hypoglycaemic drugs (Tolbutamide), Thyroid	
	hormones and Antithyroid drugs (L- Thyroxine,	
	Propylthiouracil) Pancuronium, vecuronium,	
	rocuronium, rapacuronium, dacuronium,	
	malouètine, duador, dipyrandium, pipecuronium,	
	chandonium. Anticoagulants and haemostatic	
	agents: Warfarin, Phenindione, Oxytocics (includes	
	discussion on Ergot alkaloids) (Ergometrine).	
	Antihistamines including discussion on Sodium	
	cromoglycate (Mepyramine, Diphenhydramine,	
	Chlorpheniramine, Promethazine). Non-steroidal	
	anti-inflammatory drugs and anti-gout drugs:	
	Indomethacin, Phenylbutazone, Allopurinol,	

	Probenecid.	
	<b>Learning activities:</b> Learner will be engaged in	
	Molecular modeling study to understand	
	neuromuscular blocking reagent	
Unit 3	General Anaesthetic Agents: Introduction, medicinal	CLO2
11 Hours	aspects of anaesthetics, mode of action, gases and	
	volatile liquid anaesthetics, intravenous	
	anaesthetics or fixed anaesthetics, toxicity of	
	general anaesthetics (Divinyl ether, Ethyl chloride,	
	Cyclopropane, Thiopentone Sodium).	
	Local Anaesthetic Agents: Introduction, Structure-	
	activity relationships, benzoic acid derivatives,	
	aminobenzoic acid derivatives, lidocaine derivatives,	
	miscellaneous, toxicity, mode of action (Benzocaine,	
	Procaine Hydrochloride, Lidocaine Hydrochloride).	
	Learning activities: Learner will be engaged in	
	web-based study to understand aesthetic reagent	
Unit 4	Sedatives-Hypnotics: Introduction, classification of	CLO3
10 Hours	sedative-hypnotics, structure-activity relationships,	
	barbiturates, amides and imides, alcohols and their	
	carbamate derivatives, aldehydes and their	
	derivatives, mode of action, pharmacological	
	properties and side effects (Barbitone,	
	Phenobarbitone, Cyclobarbitone, Pentobarbitone	
	Sodium, Thiopentone Sodium), non-barbiturates	
	(Official drugs).	
	Anticonvulsants: Introduction, epilepsy and its	
	types, SAR, barbiturates (official products),	
	hydantoins, Oxazolidinediones, Succinamides;	
	miscellaneous drugs, (Phenytoin Sodium,	
	Troxidone), Antipsychotic agents: introduction, SAR	
	and drugs like chlorpromazine, prochlorperazine,	
	etc.	
	Learning activities: Learner will be engaged in	
	group discussion to understand the structures of	
	different sedatives and hypnotics and	
	anticonvulsants.

**Course Title: Basics of Drug Discovery** 

Paper Code: CMC.527 Course Hours: 45h

L	Т	P	Credits
3	ı	0	3

**Learning outcome:** Students who successfully complete this course will be able to CLO1: Apply the knowledge of drug-receptor interactions for understanding drug mechanism

CLO2: Utilize the knowledge of ligand interactions with the active site of receptor in novel drug design and discovery

CLO3: Apply the knowledge of QSAR for novel drug designing

CLO4: Apply the knowledge of combinatorial chemistry in synthesis

Units/Hours	Content	Mapping with course learning outcome
Unit 1 11 Hours	Interactions of enzyme/receptor with drug molecules: Chirality and drug action; Covalent, ion-dipole, hydrogen bonding, C-H hydrogen bonding, dihydrogen bonding, van der waals interactions and the associated energies, Receptor & biological response, Drug-receptor interactions, receptor theories and drug action, Occupancy theory, rate theory, induced fit theory, macromolecular perturbation theory, activation-aggregation theory, Topological and stereochemical consideration.  Theoretical Aspects of Drug Action: Drug distribution, Active transport, Passive transport, The Ferguson Principle Physicochemical Parameters and Pharmacological Activity-Solubility, Partition Coefficient, Surface Activity, pKa, Ionization, Stereochemical Factors, Bio-isosterism.  Learning activities: Learner will be engaged in molecular modeling to explain drug interactions and online ADME calculation softer for determination of	CLO1, CLO2
Unit 2 12 Hours	pharmacokinetic parameters.  Enzyme kinetics in drug action: Mechanisms of enzyme catalysis, Electrostatic catalysis and	CLO1, CLO2

	desolvation, Covalent catalysis, acid-base catalysis, strain / distortion in enzyme catalysis, Coenzyme catalysis, Theories of enzyme inhibition and inactivation, Enzyme activation of drugs-prodrugs.  Drug metabolism: Metabolic Processes- Phase-I (Oxidation, Reduction & Hydrolysis) and Phase-II (Glucuronide Conjugation, Acetylation, Methylation, Sulphate Conjugation, Conjugation with amino acids and Mercapturic acid formation), Routes of Elimination, Factors Affecting Metabolism-Genetic Factors, Physiological Factors, Pharmaceutical Factors, Drug Interactions.	
	<b>Learning activities:</b> Learner will be engaged in group discussion about enzyme kinetics and drug metabolism	
Unit 3 12 Hours	Lead modification strategies; Bioisosterism, variation of alkyl substituents, chain homologation and branching, Variation of aromatic substituents, Extension of structure, Ring expansion or contraction, Ring variation, Variation in position of hetero atoms, Ring fusion, Simplification of the lead, Rigidification of lead; Discovery of oxaminquine, salbutamol, cimitidine and captopril. Structure-Activity Relationship studies in sulfa drugs, benzodiazepines, barbiturates, and taxol analogs. Principles of prodrug design, Serendipitious discovery of leads e.g. Penicillin and librium, sildenafil.	CLO3
	In silico methods: Introduction to Quantitative Structure Activity Relationship (QSAR) studies. 2-D QSAR, QSAR parameters. 3-D QSAR, CoMFA and CoMSIA. Molecular docking, Pharmacophore mapping and virtual screening.	
	<b>Learning activities:</b> Learner will be provided webbased training to familiarize SAR and <i>in silico</i> studies for drug design	
Unit 4 10 Hours	Combinatorialsynthesisandchiraldrugs:Introduction,Combinatorialapproach,	CLO4

Combinatorial library, Solid phase synthesis, resins, linkers. Parallel synthesis; Haughton's tea bag procedure, Automated parallel synthesis, Mix and Split combinatorial synthesis, Structure determination of active compounds, Synthesis of heterocyclic combinatorial libraries, Analytical characterization of synthetic organic libraries.

**Learning activities:** Learner will be engaged in webbased training to explain Combinatorial synthesis of chiral drugs.

# **Elective Course**

**Course Title: Process Chemistry** 

Paper Code: CMC.528 Course Hours: 45h

L	T	P	Credits
3	0	0	3

# Learning outcome:

After completing this course, the learner will be able to:

CLO1: The strategies of scale up process of APIs and intermediates

CLO2: The various unit operations and various reactions in process chemistry

CLO3: Study the MSDS of hazardous chemicals

Units/Hours	Content	Mapping with course learning outcome
Unit 1	Process chemistry	CLO1
12 Hours	Introduction, Synthetic strategy, Stages of scale up process: Bench, pilot and large-scale process. Inprocess control and validation of large-scale process. Case studies of some scale up process of APIs. Impurities in API, types and their sources including genotoxic impurities	
	<b>Learning activities:</b> Learner will be provided training involving case studies on scale up of APIs.	
Unit 2 12 Hours	Unit operations  Extraction: Liquid equilibria, extraction with reflux, extraction with agitation, counter current extraction.  Filtration: Theory of filtration, pressure and vacuum filtration, centrifugal filtration,  Distillation: azeotropic and steam distillation  Evaporation: Types of evaporators, factors affecting evaporation.  Crystallization: Crystallization from aqueous, non-aqueous solutions factors affecting crystallization, nucleation. Principle and general methods of Preparation of polymorphs, hydrates, solvates and	CLO2

	amorphous APIs.	
	Learning activities: Learner will be engaged in	
	group discussion to understand Extraction,	
	filtration, distillation, evaporation and	
	crystallization processes	
Unit 3	Unit Processes - II	CLO2
11 Hours	<b>Reduction:</b> Catalytic hydrogenation, Heterogeneous	
	and homogeneous catalyst; Hydrogen transfer	
	reactions, Metal hydrides. Case study on industrial	
	reduction process.	
	<b>Fermentation</b> : Aerobic and anaerobic fermentation.	
	Production of	
	Antibiotics; Penicillin and Streptomycin,	
	Vitamins: B2 and B12	
	Statins: Lovastatin, Simvastatin	
	Reaction progress kinetic analysis	
	Streamlining reaction steps, route selection,	
	Characteristics of expedient routes, characteristics	
	of cost-effective routes, reagent selection, families of	
	reagents useful for scale-up.	
	<b>Learning activities:</b> Learner will be engaged in group discussion to understand unit processes for reduction, fermentation and reaction progress kinetic analysis	
Unit 4	Industrial Safety	CLO3
10 Hours	MSDS (Material Safety Data Sheet), hazard labels of	
	chemicals and Personal Protection Equipment (PPE) Fire hazards, types of fire & fire extinguishers	
	Occupational Health & Safety Assessment Series	
	1800 (OHSAS-1800) and ISO-14001(Environmental	
	Management System), Effluents and its	
	management	
	Learning activities: Learner will be provided	
	Awareness about industrial safety protocols

**Course Title: Nuclear Chemistry** 

Paper Code: CMC.529 Course Hours: 45h

L	Т	P	Credits
3	0	0	3

# Learning outcome:

After completing this course, the learner will be able to

CLO1: Explain the nuclear structure and its stability

CLO2: Describe nuclear reactions and different fission model CLO3: Explain reactor theory along with nuclear resources

CLO4: Describe interaction of gamma radiation

Units/Hours	Content	Mapping
		with course
		learning
	- 1 0	outcome
Unit 1	Nuclear Structure and Stability	CLO1
10 Hours	Binding energy, empirical mass equation, nuclear	
	models, the liquid drop model, the shell model, the	
	Fermi gas model & collective nuclear model, nuclear	
	spin, parity & magnetic moments of odd mass	
	numbers nuclei.	
	<b>Learning activities:</b> Learner will be provided	
	models to explain structure and stability of nucleus	
Unit 2	Nuclear reaction	CLO2
12 Hours	Introduction, Production of projectiles, nuclear cross	
	section, nuclear dynamics, threshold energy of	
	nuclear reaction, Coulomb scattering, potential	
	barrier, potential well, formation of a compound	
	nucleus, Nuclear reactions, direct Nuclear reactions,	
	heavy ion induced nuclear reactions, photonuclear	
	reactions.	
	Nuclear fission	
	Liquid drop model of fission, fission barrier and	
	threshold, fission cross section, mass energy and	
	charge distribution of fission products, symmetric	
	and Asymmetric fission, decay chains and delayed	
	neutrons.	
	<u>L</u>	l

	<b>Learning activities:</b> Learner will be provided Web based learning to understand nuclear	
	fission reactions	
Unit 3	Reactor Theory	CLO3
12 Hours	Nuclear fission as a source of energy, Nuclear chain reacting systems, critical size of a reaction, research reactors, graphite moderated, heterogeneous, enriched uranium reactors, light water moderated, heterogeneous, enriched uranium reactors, water boilers enriched aq. Homogeneous reactors, Thermonuclear reactors, gamma interactions, shielding and health protection. Reactors in India.  Nuclear Resources in India  Uranium and Thorium resources in India and their extractions, Heavy water manufacturing in India.	
	<b>Learning activities:</b> Learner will be engaged in group discussion to understand reactor theory and natural resources in India	
Unit 4 11 Hours	Elements of Radiation Chemistry Radiation Chemistry, Interaction of radiation with matter, Passage of neutrons through matter, Interaction of gamma radiation with matter, Units for measuring radiation absorption, Radiolysis of water, Free radicals in water radiolysis, Radiolysis of some aqueous solutions	CLO4
	<b>Learning activities:</b> Learner will be provided Web based learning to understand radiation chemistry and interaction of gamma radiation

# **Learning Outcomes:**

After completing this course, the learner will be able to:

CLO1: Define an appropriate research problem

CLO2: Describe the objectives based on literature search.

CLO3: Prepare poster and dissertation work

CLO4: To apply biostatistics in research problem

Units/Hours	Content	Mapping with course learning outcome
Unit 1 12 Hours	General Research Methodology: Research, objective, requirements, practical difficulties, review of literature, study design, types of studies. Strategies to eliminate errors/bias, controls, randomization, crossover design, placebo, blinding techniques.	CLO1, CLO2
	<b>Learning activities:</b> Learner will be engaged in literature search and study design	
Unit 2 11 Hours	<b>Technical writing:</b> Scientific writing, Writing research paper, Poster preparation and Presentation and Dissertation.	CLO3
	<b>Learning activities:</b> Learner will be engaged in scientific writing, poster presentation and dissertation	
Unit 3 10 Hours	<b>Library:</b> Classification systems, e-Library, Reference management, Web-based literature search-engines	CLO2
	<b>Learning activities:</b> Learner will be engaged in webbased literature search engine	
Unit 4 12 Hours	<b>Biostatistics:</b> Definition, application, sample size, importance of sample size, factors influencing sample size, dropouts, statistical tests of	CLO4

significance, type of significance tests, parametric (students "t" test, ANOVA, Correlation tests coefficient, non-parametric regression), tests analysis of variance, (wilcoxan rank tests. correlation, chi square test), null hypothesis, P values, degree of freedom, interpretation of P values. **Learning activities:** Learner will be engaged in Web based learning to explain concepts of biostaticts in reseach problem

Course Title: Organic Chemistry-III

Paper Code: CMC.552 Course Hours: 45h

# **L T P Credits** 3 0 0 3

## Learning outcome:

After completing this course, the learner will be able to:

CLO1: Determine the mechanism and feasibility of a chemical reaction

CLO2: Describe the asymmetric synthesis, chiral resolution and apply it on the resolution of chiral drugs.

CLO3: Conceptualize various metal and non-metal reagents towards oxidation and reduction reactions

Units/Hours	Content	Mapping with course learning outcome
Unit 1	Reaction mechanism, structure and reactivity:	CLO1
15 Hours	Types of mechanisms, types of reactions, kinetic and thermodynamic control, Hammond's postulate, Curtin-Hammett principle, Potential energy diagrams, Transition states and intermediates, Kinetics and non-kinetics method, Isotopes effects, Effect of structure on reactivity; Resonance, inductive, electrostatic and steric effect, quantitative treatment, the Hammett equation and linear free energy relationship, Substituent and reaction constants, Taft equation.  Learning activities: Learner will be engaged in	
Unit 2	Group discussion to explain reaction mechanism <b>Asymmetric synthesis,</b> chiral pools, chiral	CLO2
15 Hours	catalysis: Chiral auxiliaries, methods of asymmetric induction – substrate, reagent and catalyst-controlled reactions; enantiodiscrimination. Chemo- regio- and stereoselective transformations, Organocatalysis, Case study pertaining to assymetric synthesis  Learning activities: Learner will be engaged in Molecular models to explain the stereochemistry in asymmetric reaction	0.002

Unit 3	Metal and non-metal mediated oxidation and	CLO3
15 Hours	reductions: Mechanism, Selectivity,	
	Stereochemistry and applications of oxidation	
	reactions, Oppenauer, Baeyer-Villiger, Oxidation	
	reactions using DDQ, NBS, lead tetraacetate,	
	selenium dioxide, DCC, PCC, CAN, Cr and Mn	
	reagents, periodic acid, Osmium tetroxide, Swern	
	oxidations, Hydroboration, Dehydrogenation,	
	Ozonolysis, Epoxidations using peracids.	
	Mechanism, selectivity, stereochemistry and	
	applications of catalytic hydrogenations using Pd,	
	Pt and Ni catalysts, Clemmensen reduction, Wolff-	
	Kishner reduction, Meerwein-Pondorff-Verley	
	reduction, Dissolving metal reductions, metal	
	hydride reductions using NaBH <sub>4</sub> , LiAlH <sub>4</sub> , DIBAL.	
	Wilkinson's Rh catalysis, Boron in reduction	
	<b>Learning activities:</b> Learner will be engaged in web mediated activity to explain different reagents in chemical synthesis

Course Title: Organic Synthesis-III-(Practical)

Paper Code: CMC.553 Course Hours: 60h

L	T	P	Credits
0	0	4	2

Learning outcomes: After completing this course, the learner will be able to

CLO1: Synthesize 5, 6, and 7 membered heterocyclics compounds and their

characterization

CLO2: Synthesis under photochemical conditions

CLO3: Describe Metal catalyzed reactions

CLO4: Interpret of UV, IR, <sup>1</sup>H data and <sup>13</sup>C NMR, IR, UV and Mass spectral data

#### **Course contents:**

Practical	Content/Title	Mapping with course
	•	learning outcome
1.	Synthesis of 5, 6, and 7 membered heterocyclics using conventional heating or microwave heating	CLO1
2.	Experiments involving photochemical reactions	CLO2
3.	Experiments involving metal catalyzed reaction	CLO3
4.	Exercises of structure identifications of above synthesized compounds <i>via</i> spectral interpretation using UV data	CLO4
5.	Exercises of structure identifications of above synthesized compounds <i>via</i> spectral interpretation using IR data	CLO1, CLO4
6.	Exercises of structure identifications of above synthesized compounds <i>via</i> spectral interpretation using <sup>1</sup> H data	CLO1, CLO4
7.	Exercises of structure identifications of above synthesized compounds <i>via</i> spectral interpretation using <sup>1</sup> H data and <sup>13</sup> C NMR	CLO1, CLO4
8.	Exercises of structure identifications of above synthesized compounds <i>via</i> spectral interpretation using Mass	CL04
9.	Exercises of structure identifications of above synthesized compounds <i>via</i> spectral interpretation using combined data of UV, IR, <sup>1</sup> H data and <sup>13</sup> C NMR, IR, UV and Mass.	CL04

Course Title: Skill and Entrepreneurship

Paper Code: CMC. 554 Course Hours: 30h

L	Т	P	Credits
2	0	0	2

**Learning Outcomes:** After completing this course, the learner will be able to:

CLO1: Understand the basic concepts of skill entrepreneur, entrepreneurship and its importance.

CLO2: Aware of the issues, challenges and opportunities in skill entrepreneurship.

CLO3: Develop capabilities of preparing proposals for starting small Pharmaceutical businesses.

CLO4: Know the availability of various institutional supports for making a new start-up for Drug Discovery.

Units/Hours	Content	Mapping
		with course
		learning
		outcome
Unit 1	Introduction to entrepreneur and entrepreneurship;	CLO1
6 Hours	Characteristics of an entrepreneur; Characteristics	
	of entrepreneurship; entrepreneurial traits and	
	skills; innovation and entrepreneurship; Types of	
	entrepreneurial ventures; enterprise and society in	
	Indian context; Importance of women	
	entrepreneurship	
	•	
	Learning activities: Learner will be engaged in	
	Group discussion to explain the concept of	
TT '4 O	entrepreneurship	OT 00
Unit 2	Promotion of a venture – Why to start a small	CLO2
8 Hours	business; How to start a small business;	
	opportunity analysis, external environmental	
	analysis, legal requirements for establishing a new	
	unit, raising of funds, and establishing the venture -	
	Project report preparation – format for a preliminary	
	project report, format for a detailed/final project	
	report.	

	Learning activities: Learner will interact with	
	Entrepreneurs to understand how to start small	
	business	
Unit 3	Launching and Organising an Enterprise in	CLO1, CLO2
10 Hours	Medicinal and Process Chemistry: Environment	
	scanning - Information, sources, schemes of	
	assistance, problems. Enterprise selection, market	
	assessment, enterprise feasibility study, Resource	
	mobilisation - finance, technology, raw material, site	
	and manpower. Costing and marketing management	
	and quality control. Feedback, monitoring and	
	evaluation.	
	Learning activities: Learner will be engaged in	
	Group discussion to explain about resource	
	mobilization, costing and marketing management	
Unit 4	Preparing Project Proposal to Start On New	CLO3, CLO4
6 Hours	Enterprise Project work in Drug Design development	
	- Feasibility report; Planning, resource mobilisation	
	and implementation.	
	<b>Learning activities:</b> Learner will be engaged to	
	prepare project proposal to start new enterprise	
	propert project proposer to start new enterprise

Course Title: Green Chemistry Paper Code: CMC.555

Paper Code: CMC.558
Course Hours: 45h

L	T	P	Credits
3	0	0	3

# Learning outcome

After completing this course, the learner will be able to:

CLO1: Describe various aspects of green chemistry for sustainable development

CLO2: Utilize ionic liquids and solid supported reaction conditions to reduce or

eliminate use of volatile organic solvents

CLO3: Utilize MW and sonicator in organic synthesis

Units/Hours	Content	Mapping
		with course
		learning
		outcome
Unit 1	Introduction to green chemistry: History, need	CLO1
15 Hours	and goals. Green chemistry and sustainability,	
	dimensions of sustainability, limitations/obstacles	
	in pursuit of the goals of green chemistry.	
	Opportunities for the next generation of materials	
	designers to create a safer future. Basic principles of	
	green chemistry: Atom economy and scope,	
	Prevention/Minimization of hazardous/toxic	
	products, designing safer chemicals, Selection of	
	appropriate auxiliary substances (solvents,	
	separation agents etc.), use of renewable starting	
	materials, Avoidance of unnecessary derivatization-	
	careful use of blocking/protection groups. Use of	
	catalytic reagents (wherever possible) in preference	
	to stoichiometric reagents, designing biodegradable	
	products, Prevention of chemical accidents,	
	Strengthening/development of analytical techniques	
	to prevent and minimize the generation of hazardous	
	substances in chemical processes.	
	<b>Learning activities:</b> Learner will be engaged in	
	Group discussion to explain Green Chemistry	
	Principles	
Unit 2	<b>Approaches to green synthesis:</b> Basic principles of	CLO2
15 Hours	green synthesis. Different approaches to green	
	synthesis, Use of green reagents in green synthesis:	

	polymer supported reagents, polymer supported peptide coupling reagents. Green catalysts, Phase-transfer catalysts in green synthesis. Advantages of PTC, Reactions to green synthesis, Application of PTCs in C-alkylation, N-alkylation, S-alkylation.	
	Darzens reaction, Williamson's synthesis, Wittig reaction, Click Chemistry. Use of Crown ethers in esterification, saponification, anhydride formation, aromatic substitution and elimination reactions. Water and ionic liquids as green solvents.	
	<b>Learning activities:</b> Learner will be engaged in Group discussion to explain the use of PTC and crown ethers	
Unit 3	Microwave induced and ultrasound assisted	CLO3
15 Hours	green synthesis: Introduction to synthetic organic transformation under microwave (i) Microwave assisted reactions in water (ii) Microwave assisted reactions in organic solvents. (iii) Microwave solvent free reactions Ultrasound assisted reactions: Introduction, substitution reactions, addition, oxidation, reduction reactions. Biocatalysts in organic synthesis: Introduction, Biochemical oxidation and reductions.	
	<b>Learning activities:</b> Learner will be engaged in Web based learning to Perform Microwave induced and ultrasound assisted reactions

## **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Conceptualize general principle and theory of spectroscopy

CLO2: Describe the concept and instrumentation of UV-Vis, IR, NMR, Mass and

Chromatographic techniques

CLO3: Solve the spectra of compounds

CLO4: Separate different constituents in a mixture by chromatographic techniques

Units/Hours	Jnits/Hours Content	
		with course
		learning
		outcome
Unit 1	UV-Visible spectroscopy: Introduction, Theory,	CLO1, CLO2
12 Hours	Laws, Instrumentation associated with UV-Visible spectroscopy, Choice of solvents and solvent effect and Applications of UV-Visible spectroscopy, Difference/ Derivative spectroscopy.  IR spectroscopy: Theory, Modes of Molecular vibrations, Sample handling, Instrumentation of Dispersive and Fourier – Transform IR Spectrometer, Factors affecting vibrational frequencies and Applications of IR spectroscopy, Data Interpretation, Theory of NIR.	
	Learning activities: Learner will be provided Hands on training to different instruments like UV Spectrophotometer, IR and spectroflourimetry	
Unit 2	NMR spectroscopy: Quantum numbers and	CLO1,
12 Hours	their role in NMR, Principle, Instrumentation, Solvent requirement in NMR, Relaxation process, NMR signals in various compounds, Chemical shift, Factor influencing chemical shift, Spin-Spin coupling, Coupling constant, Nuclear magnetic double resonance, Brief outline of principles of FT-NMR and <sup>13</sup> C NMR. Applications of NMR spectroscopy.	CLO2, CLO3

Unit 3 11 Hours	Learning activities: Learner will be provided NMR spectra's for the characterization of compounds  Mass Spectroscopy: Principle, Theory, Instrumentation of Mass 10 Spectroscopy, Different types of ionization like electron impact, chemical, field, FAB and MALDI, APCI, ESI, APPI Analyzers of Quadrupole and Time of Flight, Mass fragmentation and its rules, Meta stable ions, Isotopic peaks and Applications of Mass spectroscopy.	CLO1, CLO2, CLO3
	<b>Learning activities:</b> Learner will be provided mass spectra's for the characterization of compounds	
Unit 4	Chromatography: Principle, apparatus,	CLO2, CLO4
10 Hours	instrumentation, chromatographic parameters, factors affecting resolution, isolation of drug from excipients, data interpretation and applications of the following: Thin Layer chromatography, High Performance Thin Layer Chromatography, Ion exchange chromatography, Column chromatography, Gas chromatography, High Performance Liquid chromatography, Ultra High-Performance Liquid chromatography, Affinity chromatography, Gel Chromatography  Learning activities: Learner will be provided experience of chromatography by using different	
	experience of chromatography by using different techniques like TLC, Column, HPLC, HPTLC and GC

Paper Code: CMC.557 Course Hours: 45h

L	T	P	Credits
3	0	0	3

## **Learning Outcomes**

After completing this course, the learner will be able to:

CLO1: Conceptualized the concept of Regio- and stereo-selectivity in enolate generation

CLO2: Explain ylide reactions and their stereochemistry

CLO3: Explain the mechanism and applications of different naming reactions

Units/Hours	Content	Mapping with course learning outcome
Unit 1 15 Hours	Alkylation: Enolates: Regio- and stereo-selectivity in enolate generation. "O" versus "C" alkylation, Effect of solvent, Counter cation and Electrophiles; Symbiotic effect; Thermodynamically and kinetically controlled enolate formations; Various transition state models to explain steroselective enolate formation; Enamines and metallo-enamines; Regioselectivity in generation, Application in controlling the selectivity of alkylation.  Learning activities: Learner will be engaged in Web base learning to understand the concepts of enolates	CLO1
Unit 2 15 Hours	Reaction of ylides: Phosphorus ylide; Structure and reactivity, stabilized ylides, effects of ligands on reactivity, Witting, Wittig-Horner and Wadsworth, Emmons reactions-mechanistic realization; E/Z selectivity for olefin formation, Schlosser modification: Peterson's olefin synthesis. Sulphur Ylides; Stabilized and non-stabilized ylides: Thermodynamically and kinetically controlled reactions with carbonyl compounds, regio- and stereo-selective reactions	CLO2

	<b>Learning activities:</b> Learner will be engaged in	
	Molecular models to explain the reaction of	
	ylides and their E/Z selectivity	
Unit 3	Rearrangements: General mechanistic	
15 Hours	considerations-nature of migration, migratory	
	aptitude, Mechanistic study of the following	
	rearrangements: Pinacol-pinacolone, Wagner-	
	Meerwein, Benzil-Benzillic acid, Favorskii,	
	Arndt-Eister synthesis, Neber, Beckmann,	
	Hofmann, Curtius, Schmidt, Baeyer-Villiger,	
	Shapiro reaction, Carroll, Claisen, Cope,	
	Gabriel-Colman, Smiles and Sommelet-Hauser	
	rearrangements.	
	Selective Name Reactions: Aldol, Perkin,	
	Stobbe, Dieckmann Condensation, Reimer-	
	Tiemann, Reformatsky Grignard reactions,	
	Diels-Alder reaction, Robinson Annelation,	
	Michael addition, Mannich reaction, Stork-	
	enamine, Sharpless Asymmetric Epoxidation,	
	Ene, Barton, Hofmann-Loffler Fretag, Shapiro	
	reaction, Chichibabin Reaction.	
	Learning activities: Learner will be engaged in	
	Group discussion to explain rearrangement and	
	name reactions.

# Learning outcome:

Students who successfully complete this course will be able to

CLO1: Describe stereo-chemical aspects of metal complexes and their application in medicinal chemistry

CLO2: Apply the phenomenon of reaction kinetics and their applications

CLO3: Apply partition coefficient of solutes in different solvent, phenomenon of adsorption and electrochemistry

Units/Hours	Content	Mapping with course learning
		outcome
Unit 1 12 Hours	Isomerism: Ligand field theory and molecular orbital theory; nephelauxetic series, structural distortion and lowering of symmetry, electronic, steric and Jahn-Teller effects on energy levels, conformation of chelate ring, structural equilibrium, Magnetic properties of transition metal ions and free ions present, Effects of L-S coupling on magnetic properties, Temperature independent paramagnetism (TIP) in terms of crystal field theory CFT and molecular orbital theory (MOT), Quenching of orbital angular momentum by crystal fields in complexes in terms of splitting. Effect of spin-orbit coupling and A, E & T states mixing, first order and	
	second order Zeeman effects, Spin paired and spin-free equilibria in complexes magnetic properties of polynuclear complexes involving OH, NH <sub>2</sub> and CN bridges.  Learning activities: Learner will be engaged in Group discussion to explain Jahn-Tailor effect, Zeeman effect and CFT theory	
Unit 2 11 Hours	<b>Transition Metal Complexes:</b> Introduction, Potential energy diagram and reactivity of metal complexes, ligand	CLO1

	substitution reactions, substitution reactions	
	mechanisms, labile and Inert metal complexes,	
	Acid hydrolysis, Factors affecting acid	
	hydrolysis, Base hydrolysis, Conjugate base	
	mechanism, Anation reaction. Substitution	
	reactions in square planar complexes, Trans	
	effect, Mechanism of the substitution reaction	
	Reactions without metal ligand bond cleavage,	
	electron transfer processes outer and inner	
	sphere. The Marcus theory, doubly bridged	
	inner-sphere transfer, other electron transfer	
	reactions; two electron transfers, Non-	
	complementary reaction, Ligand exchange via	
	electron exchange, reductions by hydrated	
	electrons. Applications of metal complexes in	
	Medicinal Chemistry.	
	<b>Learning activities:</b> Learner will be engaged in	
	Group discussion to explain Potential energy	
	diagram and reactivity of Transition metal	
	complexes	
Unit 3	Chemical Kinetics: Empirical rate laws and	CLO2
10 Hours	temperature dependence; complex reactions;	
	steady state approximation; determination of	
	reaction mechanisms; collision theory; Potential	
	energy surfaces; transition state theory	
	(statistical and classical treatment);	
	unimolecular reactions and Lindemann	
	mechanism; Solution kinetics factors affecting reaction rate in solution. Effect of solvent and	
	ionic strength (primary salt effect) on the rate	
	constant. Secondary salt effects.	
	<b>Learning activities:</b> Learner will be engaged	
	in Web base learning to understand the	
	concepts of chemical kinetics	
Unit 4	<b>Chemical Equilibrium:</b> Gibbs energy is a	CLO3
12 Hours	minimum with respect to the extent to the	
	extent of reaction, Equilibrium constant is a	
	function of temperature, Standard Gibbs	
	energies of formation is used to calculate	
	Equilibrium constant, Direction of reaction	
	spontaneity, Van't Hoff equation, Molecular partition functions and related thermodynamic	
	=	
i e	l data	
	data. <b>Adsorption:</b> Adsorption of solids, Gibbs	

-	
	adsorption isotherm, BET adsorption isotherm:
	estimation of surface area of solids, Langmuir
	and Fredulich Isotherms, catalysis.
	Learning activities: Learner will be engaged
	in Web base learning to understand the
	concepts of Chemical equilibrium and
	adsorption

## The following are some of the modes of classroom transaction

- Lecture
- Group discussion
- Demonstration

- PPT
- YouTube
- Google drive

#### **Semester IV**

**Course Title: Dissertation Part-II** 

CMC. 600 Course Hours:

L	T	P	Credits
0	0	40	20

### Learning outcome:

After completing this course, the learner will be able to:

CLO1: Plan and execute experiments in the laboratory

CLO2: Interpret, analyze the results and write the dissertation report.

#### **Evaluation criteria:**

- Experimentation in laboratory
- Interpretation of result
- Physical presentation
- Questions and answers
- Report evaluation

Mapping with course learning outcome: CLO1, CLO2

The following are some of the **modes of classroom transaction** 

1) Lecture

4) Seminar

2) Demonstration

5) Group discussion

3) Project Method

The following tools can be used in different transactional modes:

PPT

google drive

Multimedia packages

#### Software tools

- Tracker
- ChemBioDraw
- Schrodinger maestro/or any freeware
- ppt/impress
- BLAST
- Endnot
